In your usual idiotic way, you manage to misconstrue completely the
situation and my position at the same time. You are giving Libertarians
a bad name with your inane pronouncements. No one ever even remotely
suggested any change to the constitution or any of its provisions. We
DID suggest that moves made by the government to stop big holes in our
security -TEMPORARY moves that are virtual duplicates of earlier wartime
moves, changes that are completely foreign to you, an alleged history
major,(I guess EE was your minor?)
I don't think anyone needs any further proof of where your head is.

Great analysis, Dwight, Par for your course. How do you think the terrorists were able to dowhat they did on Sept 11? Basically it was because jokers like complain so much that we had virtually NO airport security and they read it like a book. You have no idea how much your type aids them.
Of course I have -nowhere abna at no time remotely suggested getting rid of our free and open society. Only fools like you fail to understand the meaning of free and open. It's all or nothing, and if there are enough misanthropes like you and Cecil, the result will be nothing. "Free and open" must be interpreted to everday life in society. If you two had your way there would be no laws, no regulations of any kind and you could do anything you wanted anytime, anywhere. Tell it to women living under the the Taliban.

Well, you have no choice. In this country, minority rights but majority rule is the law and that's the way it has to be. You have a right to your opinion, inaccurate as it may be. It isn't my decision of course, rather that of our government which is -correctly, at last- moving to counter the destruction that has already been visited upon us.

So whine away, and protest your lack of rights to violate the law at will, as you always have. Won't change a thing, and it should not.

>
You are correct.

Don't be intimidated by 5 wpm. I strongly recommend Code Quick
(www.cq2k.net) for learning Morse Code. Instead of enduring the
drudgery of memorization, you learn the rhythm of Morse Code with
cutesy sound-alikes like "a LIGHT is lit" for L and
"vee-vee-vee-VAAAAAHHHHH!" for V. Code Quick is Morse Code Training
with ATTITUDE! It's like the difference between listening to
Christina Aguilera and listening to Metallica. :)

Of course, you'll also find that everyone who has passed 5 wpm (and
especially those who passed at 13 wpm and 20 wpm earlier) promotes
his/her pet method with religious fervor and thinks all the
alternative methods are lame.

You keep insisting that we live in a democracy and that the tyranny of
the majority is the way to go. Got news for you, Dick. We live in a
republic and every citizen possesses inalienable individual rights.
If 99% of the citizens of the US voted to deport me, it would still
not happen. If we freely give up those rights, we will never get them
back. Some of us are not willing to freely give up the inalienable
individual rights guaranteed to us by The US Constitution.

Question: Are you willing to give up your right to own a gun for the
purpose of self defense? Are you willing to give up your right to
express your opinion? If not, you are a hypocrite.

Forget it, Larry. Those ignoramouses haven't a clue. Dwight sees a few National Guardsmen missing around the mall, a sight you can see on any weekend on most any mall in the country, and he automatically puts two and two together for a sum of six. Just because of the current situation, he is "losinghis rights". Whatta dolt.

That could certainly be true- from a perspective the postwar. It is characteristic of you that you fail to undestand that was NOT true at the time it was done.

That's a lie. I am a strict law-and-order guy and believe in the death
penalty for a number of crimes including murder. What I object to is
your desire to punish the innocent along with the guilty. You are like
the people who want to outlaw the serving of peanuts on airplanes
because someone, somewhere, sometime might be allergic to them. You
are for unreasonable search and seizure of the innocent on the outside
chance that a guilty person might be caught. Consider moving to China
where those conditions you advocate already exist.

Every few years in Madison County, TX, a few cows have to be killed
and buried because of Anthrax. A number of deer have died from the
decease this year around here. I suspect that plowing a field can
stir up natural Anthrax spores.

5996. Why aren't more hams in clubs?

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-18 14:07:06 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0110180607.22b9b028@posting.google.com>
Source record: 22189

Based on the two clubs I have been in, it seems to me that only about 10% of amateur radio operators are members of clubs.

Why aren't the other 90% in clubs?

Ever since I was first licensed in early 1997, I have made it a point to always be a member of the local club. As an amateur radio outsider, I feel it is even more necessary for me to be in a club. Nobody in my family is a ham, and I was unaware of amateur radio until about 5-6 years ago. If I had never joined a club, who would have helped me build a mount for my Screwdriver antenna for my apartment? How would I have had a chance to see the antennas other hams use? How could I meet with dozens of hams (and get to know a few) on a regular basis if I weren't in a club? Yes, I do have USENET and other discussion forums, but there is no substitute for meeting people in person.

What would it take to induce more licensed hams to join a club?

Get real, Dick. If absolutely NO proof has appeared in the last 55
years, then there was absolutely NO proof existing at the time. It
was a willy-nilly violation of the constitutional rights of some
American citizens. Most US citizens are apologetic for that atrocity.
What is wrong with you? Do you still hate all Japanese-Americans?

That's rich coming from someone living half a century in the past.
You and Larry are the only two Americans I know of who have not
apologized to those Japanese-American citizens for the atrocity
that was forced upon them. There was an episode about it on The
History Channel the other day. Many of those people lost their
jobs and their businesses and their lives were ruined. All because
people like you don't trust fellow citizens who are different from
you in some unimportant way.

I would suspect DUI is that bad and we know what happened when we took the
ideologically pure approach to that. One gets us Al Capone, the other ben
Laden.

Good question! Here are some ideas:

- The reason drugs are sneaked into this country is that there are
lots of people willing to spend lots of money on them.

- The USA has not focused on keeping our borders secure enough. Most
of the terror suspects were in the USA legally. All that is changing.

OK, now I get it. You just grab a pair of tweezers and a plastic
baggy and go out in the cow barn and collect some spores and mail
them to Dan Rather. Anybody could do that! What was I thinking
anyhow. Don't need any funding or organization at all to pull that
off. Just an envelope and a 34-cent stamp.

Sorry, Mr. Stewart, but you have been taken in by all the
government spin-doctoring lately, and you're head is so far
into the sand that only a couple ostrich-ass feathers remain
above groud to reveal your position.

With all kind wishes,

de Hans, K0HB

Tell you one thing, if I ran a government spending 34 bil on the DEA alone
and probably close to 100 overall and this is what I had to show for it,
heads would roll.

As far as the War on Drugs, seems like a good time to think about surrender
terms.

I was three years old when Pearl Harbor was attacked and I
wasn't a Libertarian yet. If it happened again today, I
would be vehemently opposed to interment of otherwise
innocent American citizens. Do you think we should lock
up all the Moslems who are American citizens?

What makes a club worth the time for me, personally, is a bunch of hams
eager to learn and another bunch of hams capable of and eager to teach.

Ask away.

>In the event of an emergency (national or local) where would radio operators
>gather to pass information?

The answer can only be genericaly adressed by stating that it
depends on whatever preliminary agreements/practices/etc
that have been established by local, county and state emergency
groups such as RACES.

>Is there a predetermined band?

No. As above, it will vary acording to prestablished practices.

>What mobile gear would be required to monitor?

Cheapest would be a scanner that covers 30MHz to 500MHz.
There is some, but not much, activity in the HF segments (i.e.
3 to 30MHz) but most activity today is voice (FM) usually at
144 MHz or the 440MHz band segments.

>Which license is required to transmit?

You can participate in such activities with a Technician level
license (visit WWW.ARRL.ORG for details). The tech license
does NOT require any knowledge of morse code.

>Thanks very much

You're welcome.

>
>Why aren't the other 90% in clubs?

One reason is because ham radio is an activity that really
doesn't require a club support to enjoy. Car clubs abound
because antique car owners look to club activities for
venues and opportunities to use the car. Hams need only
"get on the air" to participate in the hobby.

All good reasons for you to join a club. They are not, however,
universally applicable to all people or all hams in particular.

>What would it take to induce more licensed hams to join a club?

If you find out, let everyone know as the answer has
always been elusive.

We have a winner in the LWATAOTYC (Lame, Weak, And Tortured Analogy Of
The Year Contest)!!!!!!!

Most (all?) users of illegal drugs voluntarily consume those drugs, knowing
full well the medical risks involved, but only 19 persons volunteered to die
in the 4 aircraft which attacked our nation on 9/11/2001.

With all kind wishes,

>What would it take to induce more licensed hams to join a club?

I can't answer that. However, I do note this:

At the test sessions that I am part of, one of the things we give out to newly licensed amateurs is a short list of some of the local repeaters (usually those that we own, control, or are known to be friendly to newcomers [and all are coordinated as "open" - and do NOT include our local 145.460- or 147.435(odd split) "bad boy" problem boxes]). Out of all that (usually 20 candidates per session with about 50% of them being new licensees), only about 3 in the past two years that I am aware of have popped on the subset of those repeaters on the list which I monitor ON ACCOUNT of the list. One other person came to a club meeting via similar circumstances, but hasn't returned since. I've eliminated those who were specifically invited by a repeater user or club member, etc.... (other reasons besides the list).

I wonder about a similar question: Where are all of these new licensees going and/or what are they doing? My VE group turns out 100+ new amateurs per year (if not more), but we don't see or hear most of them again on a repeater or at a club meeting. Simplex isn't crowded enough to explain this, nor are these people HF-capable (at least, from their license class). Packet, excluding APRS, and ATV haven't seen any significant growth.

Only a very few of these are easily explainable as to why we don't see them. Usually, they're getting a license because another family member or a close friend has one.

We've permitted some local clubs to hand out stuff to newly licensed individuals at our session as well, but that hasn't helped them.

I repeat: Where are these people going or what are they doing after getting their licenses?

You just demonstrated a textbook example of the ad hominem fallacy, Len. You attacked the messenger, (me) rather than analyze the message. In fact, you completely snipped the message.

I'm not delusional. I simply posted some observations that you don't like. I think those observations are true - otherwise I wouldn't have posted them.
>
>Sorry, your godhood, they are just opinions.

They are observations. If they are not true, why don't you show why they aren't?

It is interesting that in one post you call me an idiot and a few days later you call me a god. Truth is, I'm neither. But you don't want to deal with the reality of a ham who is also an EE, has mastered both Morse code and the Smith Chart, and who isn't intimidated by you.

1974-5. It cost almost $400 and ate batteries fast. Classmate of mine had one.

>That was 30 years ago. The "younger engineers" (who
>have not used a slide rule) are now bumping up against
>the age of 50! :-)

Most of us in the engineering classes of 1976 or so used slide rules because
the early calculators were expensive and prone to battery failure at
inopportune times. In a few years things changed to the point where a
calculator cost less than a good slide rule. End of story.

It is interesting to see how you demean and denigrate them. Says a lot. You want to tell us what we should like and dislike.

Vacuum tubes are still in wide use. Ask anyone with a CRT. Or a high-end stereo.

Most of the electricity generated in the modern world is the result of steam engines (turbines) driving alternators.

>The Smith Chart
>format still appears as the display on modern network
>analyzers and is still being used by today's RF workers.

Morse code still appears as a standard feature in modern HF/MF amateur radio transceivers and is still being used by today's hams.
>
>Er, sorry to mention morse code in there.

Apology accepted.

> attack on us for no reason at all.

Lets see now....you claim that the attack on the WTC was in retailiation for
what the USA did to THEM?
Ok, lets pursue that a bit. I see you are refering to the situation in
Iraq, and don't forget we have troops
(infidels) in sacred Saudi sands. Sure there may be a point
here....but...Saudi Arabia wanted us there, and apparantly still do. So why
didn't they get attacked?

As for IRAQ and the NO Fly Zone....that was part of the agreement to end the
Gulf War conflict. Agreed to by
Sadam, etc. So now he don't like it....well then he should let the
coolition inspect for those nasty things he
is making...also something he agreed to.

So, let us now... continue back in time.....what did we do to them that made
them kill that old man in the wheel chair, and throw him overboard? That is
my furthest back recollection. So if we did indeed 'start this' then take
me ALL the way back to the FIRST attack on Americans by those bastards, and
show me we asked for it.

What about the people who lost their lives in the sneak attack?
Weren't their lives ruined? I'd say getting killed qualifies as a life
ruin...anyone else agree?

Just as a reminder of what we're talking about here, here's some stats
I saved from a post on FidoNET many years ago. Comments between the
lines of asterisks are from the Fido post and are not my own:

****

December 7, 1941 in an Air Raid that lasted 90 Minutes
The United States of America suffered the following losses

Casualties of War - Losses in The Pearl Harbor Attack of World War II

Personnel Losses

Navy 2,008 Killed 710 Wounded
Army 218 Killed 364 Wounded
Marines 109 Killed 69 Wounded
Civilian 68 Killed 35 Wounded
==========
Totals 2,403 Killed 1178 Wounded

* note the total number of those killed does not include those who
died after
the attack. It reflects those killed in the attack on Pearl
Harbor. This
is military policy to minimize the losses when viewed by people.

Equipment Losses - Vessels

Sunk and Destroyed

2 Battleships; (USS Arizona, USS Oklahoma)
2 Destroyers; (USS Cassin, USS Downes)
1 Target Ship; (USS Utah)

Sunk or Beached but Salvageable to Some Degree

3 Battleships; (USS West Virginia, USS California, USS Neveda)
1 Minelayer; (USS Oglala)

Severely Damaged but Repairable

3 Battleships; (USS Tennessee, USS Maryland, USS Pennsylvania)
3 Cruisers; (USS Helena, USS Honolulu, USS Raleigh)
1 Destroyer; (USS Shaw)
1 Seaplane Tender; (USS Curtiss)
1 Repair Ship; (USS Vestal)

Equipment Losses - Aircraft
---

188 Destroyed; (96 Army, 92 Navy)
159 Badly Damaged; (128 Army, 31 Navy)

In contrast, out of a force of 31 ships and 353 planes, the Japanese
lost only
29 planes. Japan also lost 1 submarine and 5 midget two-man boats
which had
arrive in the Hawaii area earlier. The Japanese lost a total of 64
men plus
an unknown number that were aboard the submarine.

Let us always remember the high price of human casualties that was
paid for
our country.

****

> All because
>people like you don't trust fellow citizens who are different from
>you in some unimportant way.

All because I don't like people who send an ambassador to D.C. to
negotiate peace while their sneak attack fleet is already under
way...or perpetrate atrocities like the Bataan Death March.

Nope, I would rather all American citizens be treated the same,
innocent until proven guilty. Guilty until proven innocent
reminds me of Cuba.

Yeah but, see Dwight, no one wants to deal with reality. It's much easier to focus on the WTC incident because "it looks so big" because it was. It was a big event in a very short few minutes.

Criminal acts in this country are a slow process, with one or two hit here, one or two hit there, and one must wait a whole year before the outcome is realized. You know how we Americans are about waiting around. ;)

>
>In case you missed the full story, go to:
>http://www.arrl.org/news/stories/2001/10/12/100/?nc=1

It can also be seen on the IARU website. :-)

The IARU is only an advisory group. They have NO vote, none, zip, nada, at any WRC. The only ones who can vote at WRCs are the administrations of member nations.

The IARU website also contains a truly fine work of graphics art in their position paper on the 40m band sharing controversy. I'll give them a big round of applause for that one and it should be worth the download time for the PDF of about 624K.

Unfortunately, the 40m band sharing thing has been going around and around since 1979 at that WARC. That's a period of 22 years of little to no resolution by all the previous IARU advice.

Meanwhile, the FCC IB IWG-6 hasn't yet reached any position for a draft on item 1.7 which concerns three items. One is the morse code test of ITU-R S25.5. One is on the 40m band sharing or non-sharing issue.

The Vice Chair of IWG-6 is an ARRL man.

"Membership?" ARRL membership remains fairly constant at
about 152 thousand since last year (according to IARU site as
well as ARRL site).

The maximum-ever total US ARS licensing peaked in March, six
months ago. The trend as been a continual, small loss in total
numbers since March.

>> Unless Hams make a concerted effort to reach out to the younger
>> generation, this trend will soon start to go logarithmic.
>
>Is this based on past trends?

Since 1998, the growth in total US ARS licensees has been
due to the no-code-test Technician class, roughly 10:1 more
Techs v. all other classes combined. This can be seen by
the un-spun AH0A tabulations up to ULS changeover.

The "standard argument" that "the numbers aren't changing"
is either wishful thinking or some spin saying "extras grew
the most" (while not demonstrating they are class changes
from so-called "lower" classes).

The AH0A tabulations confuse the issue by combining the
code-tested Tech-Plus with no-code Techs after April 15th
restructuring. Up to that point in time, the separate tabulations
by class showed that growth in ARS licensees was all due to
the no-code-test Techs. The combined Tech tabulations now
indicate a fall-off of the "Tech-Tech" numbers which is mostly
due to Tech-Plusses "upgrading." There are no significant
trends in the non-renewal of no-code Techs despite all the

previous assurances that their numbers will drop.

My Army Serial Number (1952-1956). The "RA" prefix stood for
Regular Army denoting voluntary enlistment. A "US" prefix
denoted a draftee and "NG" denoted National Guard. "ER"
prefix stood for Enlisted Reserve and so I had ER16408336
from 1956 to 1960, Honorable Discharge received in April 1960.

Not a Medical Discharge.

I have no "YOR ID" and do not know what it is.

My AOL membership limits the number of letters and also precludes using my full name due to the large number of AOL users who have the same first few letters. At best I could have only the first five letters plus a number suffix, therefore I chose the same handle as I had on US Pompeii BBS eleven years ago.

For those STASI-wannabe radio kops out there, I am not afraid to give my residence address, the same one that has appeared in bylines of three different national publications:

A small mention of "undeclared wars" -
June 1950 was the beginning of the Korean War. Technically it
was not a "war" even though some 37 thousand US military lost
their lives fighting in a "police action." That war has not yet
stopped and continues in a sort of permanent truce 51 years
after it started. Military lives have been lost in that "war" after
the start of the truce period in July 1953.

More blatant NIMBY'isms. Wake up ostrich, this is not about your
"own personal risk" or "your own safety". This is about a cold
calculated attempt to destroy the way of life of _all Americans_.

We aren't talking about some punk street criminal snuffing out
a competing dope dealer, but individuals who have demonstrated that
they are willing to kill THOUSANDS of unarmed citizens at a time,
and have publicly vowed that they will continue more sneak attacks
with the same result in mind.

That damned sure becomes a "main focal point" in my book, even if
it didn't raise your "own personal risk" down in Conway, SC.

With all kind wishes,

de Hans, K0HB

Jason, you got me thinking on that one. I was a member for a few years of the Rochester Amateur Radio Association (RARA). I was of the mindset the the average age of amateurs is quite old. While the average age of amateurs is certainly older than when I got into amateur radio (in the 60s), I believe something else has happened. It is called the standard of living. Back in the 60s and 70s, one skilled worker (read 'tradesman' and 'not college educated') could support a family nicely on one income. Today, often both spouses must work. Also, in retail and manufacturing, there is demand for shift workers. Back in 1978 when I became a master automation mechanic, the master automation mechanics worked strictly days; however, we were adding a 'C' shift and the 'B' shift production was ramping up rapidly. They decided they needed the skills of a master mechanic on B shift. Guess who got the shaft .... er, shift? Two years later, I became a senior developement technician and started filling in for supervision. Guess when? Today, I work a rotating 12 hour schedule. Supervision has to come in on off days and between 12 hour shifts for meetings. Workers and supervision get called in on their off days. This week I will have worked 3 twelve hour days plus 2 twelve hour nights. I dropped my membership last year because I simply couldn't make most of the meetings! Once folk retire, however, it may make sense for each spouse to have a little time and space of their own. The guys go to the ham meetings and the women may go to bingo. I am guessing, but I'm inclined to think that the requirements made on the workforce are keeping attendance down, especially for those between 20 and 40 years old.

But that was the minor gaffe in that post. He then said:

>>It is absolutely
>>foolish to legalize something that causes far more harm to this
>>country then the threat you're
>>trying to defeat.

showing that he has virtually no understanding of what happened Sept 11 nor of the current war, NOR the war on drugs. On Sept 11 the terrorists mounted a crudely coordinated attack where they planned to do far more damage than would up being done, severe as it was. And that was just another assault of many in a war in which the "threat we're trying to defeat" is to their intent to eradicate the entire USA along with numerous other "decadent" and "satanic" nations so that the world will be free to practice pure Islam. What a load of nonsense. A pair of loads, from both the Islamic terrorists and from Stewart.

Lennie, you never cease to amaze me with such total lack of mental
aptitude. So I don;t know what I'm taking about?? Let's see what some
experts have to say shall we??

From CNN

http://asia.cnn.com/SPECIALS/2001/trade.center/reserve.activations.html

1179th Deployment Support Battalion, Brooklyn, New York -- 38 personnel

From Fox News

493rd Criminal Investigation Division Kansas City, Mo. 11
1179th Deployment Support Battalion Brooklyn, N.Y. 38
323rd Military Intelligence Battalion, Company A, Detachment 1 Odenton,
Md. 8

http://dsc.mtmc.army.mil/AboutDSC/WARTRACED.htm

NEW YORK
*1179th Deployment Support Brigade, Brooklyn
*1174th Transportation Terminal Battalion, Flushing
*1302nd Port Security Company, Orangeburg
873rd CD DET, FT Wadsworth
139th TC DET CD, Flushing

>
> Anyone who has been in the US Army knows damn well there
> is a difference in size and would NOT confuse "battalion" with
> "brigade." Your TO&E fell off the table onto the floor.

Absolutely of course there is a difference, and there certainly is an
ARMY 1179th DSBrigade.

However, the unit that was activated was the ArmyReserve 1179th
DSBrigade. If you bothered to research it you'd know but in leaving out
that 1 little detail, I knew you step in shit and then put that foot in

your mouth.

So again, where they go I go=.

Now don;t you feel foolish AGAIN?? Aren't you tired of proving to the whole world you haven't a clue to anything. Must you show the world that you are indeed the village idjiot

Newsgroup name. How bet

rec.radio.Letsmake LHA look stupid again
or
rec.radio.lhaproces his ignorancemany times.policy
or
flameawaylha.idiot

feel free to add newsgroup names to the list

Problem is, those of us
> who get full header information will spot the new handle. You
> will be busted again.

No clue as to this rant however,an email from 3 NG members have clued me in. And I have no clue who he am, or for that matter who you are there Len aka NOCWTEST, LENOVER21, LENOF21, AVERY FINE all fine anonymouse calls of Leonard H. Anderson. Interesting it's OK for you but not for anyone else. How inferior you must feel.

I subscribe with EARTHLINK and come in from a NYC..that's NEW YORK CITY entry point. Whom you keep referring to shows, through a Lycos search has a MINDSPRING address and according to a DNS number search engine comes through a Succasunna NJ pop. In fact, in reading these posts, there is Bill Sohl who has a MINDSPRING address and comes through the same dialup. So maybe I'm also Bill Sohl oooooo :-)

Ya Know, Lennie, NYC is 60 miles due west and slightly North of NYC. Mindspring although owned by Earthlink maintains totally separate accounts. So that would mean I post making long distant calls and pay for 2 separate ISP's? For what? To bug you? My my aren't we pretentious. How inferior to think people go out of their way to make you look foolish when you do the job so well yourself.

Tell you what Len. You post all the header info you'd like. All it will show is that everything you know is wrong.

So as to busted. Nahhhh. You haven't a clue there copper. yea seee. top of the world ma, top of the world.

I'll be around till Sunday Lennie, so don't disappointment. Look forward to seeing what misinformation

Leonard H. Anderson. Must really suck to be you

The coalition should have never have pull out of the inspections
in Iraq. When Sadam threw them out he should have been forced to
let the inspections continue or face the consequences of the
bombing of Bagdad. We may very well suffer greatly because of
this, I think there is no doubt that he now has biological weapons
and is supplying them to the terrorists. We may well have to wipe
Iraq off the map before all this is over. Bush Sr. should have
take care of him the first time.

When it is obvious, like in the paragraph above, the statement is false, there is no edge to tread close to, Dick. The problem is when it is not obvious.

> What you said is there for all to read.

The fact that you're basing your comment on something I said in the past makes no difference, Dick. Did you provide a reference so people could see what I actually wrote? Do you expect everyone to read back through all my previous messages to see what was actually said versus your version of what was said? If you're going to paraphrase what someone has said, do so accurately or don't do it at all.

I agree with everyhting you wrote except the ages quoted above. I would say "20
to 60-65" or even older - just about anybody in a family with both adults
working fulltime. Add children to the mix and it gets even more complicated.
End result is that many hams don't have lots of predictable free time in big
blocks anymore. Instead, their free time is in bits and pieces at odd times of
the day, which kinda cuts into meeeting attendance.

So how are National Guard troops at airports, untrained in civil law enforcement, going to stop terrorists from taking plastic knives on airplanes, Dick? As a result of the WTC attack, Congress is now considering several pieces of legislation that will have sweeping implications (including the authority to detain and deport immigrants merely on suspicion, expand the government's authority to monitor online communications, ease grand jury secrecy laws, expand the government's wiretapping authority, and so forth).

http://www.cnn.com/2001/US/09/25/inv.civil.liberties/index.html

These are not temporary measures because of "wartime," Dick. These are new laws that you and I, and other Americans far into the future, will have to live with.

> Tell it to women living under the the
> Taliban.

This is not about the "women living under the Taliban," Dick. Our government does not give a darn about the women of Afghanistan. If they did, they would not be off bombing the young men and woman of that country's military (the children of these women) simply because the government of that country has refused to turn over a suspected terrorist. Those young men and women had no say in that government's decision, any more than a young private in our military has over the international affairs of this country. They simply joined the military to defend their country and are now dying because they wear a uniform. When our military leaves that country, not a thing will have changed for the women of that country (other than the fact that they'll have to bury their now dead sons and daughters).

This is not about republicans versus democrats, Ryan. Much of the legislation in Congress is being strongly supported by members of both political parties. Instead, this is about members of Congress who feel they must do something (to look good to voters) and are therefore rushing through legislation with little thought about possible future implications.

I also urge you to to learn more about republicans. Most are exactly opposite of your description above.

What's the matter, afraid someone might find some of your "one his
shit" while looking you over? Really its no surprise you'd take that
attitude. But there's noreason for you to slander me as you just did to
assauge your own insecurities. I'm in favor of no such things and have
never indicated so, and you know it. All your *ass*ertions are the
product of your twisted mind.
You a strict law and order guy? In a pig's ass. All anyone has to do
is read through your postings in the archives to find what you are.

Nowhere have I indicated that I support rounding up Arabs nor that I
supported the WW2 rounding up of the Japenese citizens, just that I DID
understand why it was done under the curcumstances, while you in your
stupor can't see past the end of your nose.

It surely does. Can you imagine a withered old geezer with nothing more interesting to do with his life than hang out on a internet forum where he has no involvement nor interest beyond attempting to denigrate a hobby which he has never been even peripherally involved, where he will never, in his lifetime, actually participate but be only a uninformed critic and detractor, just to satisfy his minuscule ego?

They sure as heck know more than you. The History Channel said there was absolutely no evidence (at the time or ever) that American citizens were any threat whatsoever. Their constitutional rights were violated, pure and simple. It will be interesting to see you howl and whine when your constitutional rights are violated in a similar manner.

Dick, a few postings ago, you went on record as favoring giving up
some of our constitutional rights in order to catch more terrorists.
In particular, you said you didn't see anything wrong with
unconstitutional search and seizure and suspension of the
probable cause principle. How you can deny what you said
just a few postings ago is beyond belief.

Didn't see that one but I did see one that was two panels. The first
panel had
a sword waving terrorist on a camel charging ahead shouting, "Holy
War!". The
second panel, he was retreating even faster shouting, "Holy $hit!".
There was
an AC-130 after him. Who said battleships were obsolete? :-)

Correct, of course. But the days of the French Connection thru Corsica and Marsailles are pretty much over. The new stuff comes out of the Golden Triangle in Thailand, Burma, and Laos plus some is being grown in South America. Hot stuff they tell me.

There is an old Phillipine Insurrection song that begins "In this land of dopey dreams, happy peaceful Phillipines" (tune is God Save Ireland or Jesus loves the little children if you like) because the southern Phillipines were the heroin capital of the planet. The arrival of US missionaries led to an international control body plus the 1914 Harrison Act implementing it. We were just booted off the UN body that dates from the period.

Dick

Cecil was wrong. Poppy production in Afghanistan has increased under the
Taliban (according to DEA).

Krell was right. And it's only one more example of what happens when
religious rhetoric is used to front for political power. I am sure the Taliban
make great hay over "destroying" poppy fields and opium stores.

Jim and Tammy Faye in rags...substitute a few key words here and there,
and it's all the same.

AMATEUR RADIO NEWSLINE(tm) REPORT #1262 - OCT. 19, 2001

Amateur Radio Newsline report number 1262 with a release date of
Friday, October 19th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The International Amateur Radio Union speaks out on Morse and the ham radio community responds. This story is first on Amateur Radio Newsline report number 1262 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: IARU MEETS - MORSE ON ITS WAY OUT

The International Amateur Radio Union meets to discuss the future of our worldwide hobby service including the Morse code. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

The Administrative Council of the International Amateur Radio Union met between the 6th and 8th of October in Guatemala City. The principal business was to continue preparations for WRC-2003, which has several items of importance to the amateur services on its agenda.

Items discussed he harmonization of amateur and broadcasting allocations near 7 MHz; adequacy of HF broadcasting allocations below 10 MHz; possible revision of Article S25 of the international Radio Regulations; changes to terms and definitions in Article S1 as a result of amendments to Article S25; review of provisions concerning the formation of amateur callsigns in Article S19; additional allocations for 'Little LEO' satellites; study of a possible allocation to the earth exploration-satellite service for synthetic aperture radar near 435 MHz; and possible identification of globally harmonized frequency bands for use by agencies and organizations dealing with public protection and disaster relief. The IARU objectives with regard to these agenda items were affirmed.

The IARU Council adopted a resolution urging member societies to seek, as an interim measure, Morse code testing speeds not exceeding five words per minute. The IARU Council, setting aside previous decisions, resolved that IARU policy is to support the removal of Morse code testing as an ITU requirement for an amateur license to operate on frequencies below 30 MHz.

Jeramy Boot, G4NJH.

--

The next scheduled meeting of the IARU Council will be in September of 2002, immediately prior to the Region 1 Conference in San Marino. (RSGB)

**

CW: HAMS REACT TO IARU DECISION ON MORSE

The IARU policy decision to support the removal of Morse code testing as an international requirement for an amateur license to operate on frequencies below 30 MHz is again sparking a hot debate. This, between those who favor retaining mandatory Morse testing and others who want to see an end to CW as a requirement to operate the high frequency bands. There is really nothing new in the arguments on either side. Amateur Radio Newsline’s David Black, KB4KCH, has more:

--

Morse code. Most hams love it or hate it.

CW, as it's also known, was developed for land based telegraphy in the early 1800's by Samuel F.B. Morse. Morse code and ham radio have gone hand in hand ever since. But now, CW as a requirement for a ham license may be going away.

The International Amateur Radio Union Administrative Council has taken the first steps. Less than two weeks ago, the group voted to set aside any previous decisions and support removing Morse code testing as an ITU requirement for hams to operate on frequencies below 30 MHz. In effect, that move seems to suggest there's little chance that the IARU will support keeping Morse testing as a requirement for getting a ham radio license.

Long time CW operator Jerry Womble, WA4QIN, of Steele, Alabama, says losing code as a license requirement would not be good for the amateur radio service.

--

Jerry Womble, WA4QIN: “If you remove code from the process of getting' a ham license I think you dilute the talents in the community, and I think it means a little less to the person who actually gets the license that he did not go through a process that most of us have gone through to obtain our license”
--

But that view is not universal.

--
Jim Baker, N4RVH: “It wouldn't bother me if they did remove it”
--

Birmingham resident Jim Baker, N4RVH, says ham radio would continue just fine without Morse code as a license requirement.

--
Jim Baker, N4RVH: “Radio is gonna to continue and its gonna progress beyond that. With what the technology is getting into now it is going to far surpass what the code started out to do and that's to communicate.”

--

These people are the middle grounders. They welcome an open exchange of viewpoints but they also know that they must accept the judgment of the service's political leaders and the world body of telecommunications regulators.

One side or the other will lose, but both sides will eventually have to live with whatever the final ITU decision on Morse code testing turns out to be.

From Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

The bottom line. Regardless what’s decided at the next World Radiocommunications conference, not everyone in ham radio is going to be happy. (ARNewsline™)

CHANCE FOR A RARE CONTACT: GHANA COMING TO 6 METERS

Its considered one of the rarest of the rare countries on VHF, but now Ghana is coming to 6 meters. This with word that a group of DXers will be operating from the city of Elmina from Friday, October 26th through 1700 UTC on Sunday, November 4th.

Arliss Thompson, W7XU, Richard Hanson, K5A-D and Ed Gray, W0SD are the expedition leaders. Thompson says that the group plans on using the call sign 9G5SIX. And while they will have the capability of operation on 160 through 10 meters they will concentrate mainly on operating the 50 MHz band both C-W and SSB.

As to gear, Thompson says that the station dedicated to 6 meter operation includes a pair of Yaesu FT-100D transceivers, a 3CX800 amplifier and a 7 element yagi on a 27 foot boom. A Icom IC-706 transceiver and loop antenna will be dedicated to monitoring 28.885 MHz on 10 meters. This is the internationally recognized frequency used by 50 MHz operators to plan 6 meter D-X contacts.

And to let everyone know if the signal from Ghana is on the air, Thompson says that they will establish a beacon on 50.106 MHz. If you hear it, there is a better than even chance you can tune up the band and make contact directly with the D-X pedition itself.

As to the High Frequency bands, Thompson says they will use a Yaesu FT-746 with Acom kilowatt amplifier feeding wire, vertical and loop antennas for 160 through 10 meters. That station will be primarily manned by W0SD. QSL information will be released at a later date.

We will have more D-X related information at the end of this weeks Amateur Radio Newsline report. (VHF Reflector)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Reading Amateur Radio Club's W3BN Repeater serving Reading Pennsylvania.

(5 sec pause here)

**

AMERICA FIGHTS BACK: A NEW EAS STRUCTURE

As reported last week, the Emergency Alert System or EAS was not activated before or during the terrorist attacks on the World Trade Center and the Pentagon. Instead, President Bush chose to use the commercial media as a way of informing the public. And shortly after the attacks the FCC suspended the need for regular tests of the EAS system for a short period of time, presumably so as not to cause panic in the general public that another attack was taking place.

Does this mean that the EAS need restructuring or modification? Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He says that its time to look at future technology and how it can be incorporated into the E-A-S system to better serve the American public.

--
Richard Rudman W6TIA: "Where I really hope we can take this is to look at something that my national advisory committee already is studying under the heading of Advanced Warning Systems. Amateur Radio operators are already familiar with them because we have been doing this for years. We have a lot of advanced warning systems."

"We need to look at the capabilities of technology are, what people are going to have for personal communications devices in the future and come up with some intelligent ways to allow people to program their devices so that they can get alerts to the hazards they want to be notified about, in some cases 24 hours a day, 7 days a week wherever they are."
--

From Rudman's comments it appears as if the concepts developed by ham radio operators along with overall advancements in personal communications technology could play a role in the future of the Emergency Alert System. Translated into everyday language, it means saving lives. (ARNewsline™)

**

AMERICA FIGHTS BACK: BAYGEN RADIOS DROPPED ON AFGHANISTAN

Radio has become an important tool in the United States military campaign in Afghanistan. In addition to its on tactical communications, the United States air dropping wind up radios to the Afghan public. Amateur Radio Newsline's Bruce Tennant, K6PZW has the details:

--
For more than two weeks the United States and its coalition allies have not only been dropping bombs and food ration packs into Afghanistan. They have also been air dropping a new secret weapon in their war on terrorism. The world famous Bay-Gen wind-up radio.

According to the British Broadcasting Company on-line service, Americans forces have reportedly also been air-dropping hundreds of the small Bay-Gen Freeplay wind-up radios into Afghanistan as the first step in what promises to be a battle for the hearts and minds of the Afghan people. The radios are thought to be specially designed fixed-frequency models that will automatically tune to information broadcasts issued by the United States military.

The BBC says that Washington is relying on the work of its renowned Commando Solo broadcasting unit to reach Afghans over the airwaves. The six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. The unit has a record of operating in U-S conflicts such as those in Panama, Bosnia and Haiti. And in addition to the efforts by the U-S military to air-drop radios, relief agencies are also working to supply commercial wind-up models to refugees, many of whom have fled their homes because of severe food shortages in Afghanistan.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The BBC on-line article says that the wind-up radios will be used to publicize food drops and the message that "the people of Afghanistan are not the enemy." The article also quotes journalist Nick Grace, of the website Clandestineradio.com who believes the Commando Solo unit is also involved in jamming the Taleban-run station Voice of Shari'ah. (BBC)

**

HAM RADIO AND THE WAR: TERRORIST ATTACKS CAUSE 2 METER BEACON DELAY

The terrorist attacks in New York City and the Pentagon caused a new ham radio beacon to be delayed. This, according to Tim Marek, K7XC, who was getting ready to put one on 144.288 MHz from Northern Nevada when the attacks on the East coast occurred.

Marek is a Radar Tech on the Naval Electronic Warfare Range in Nevada and he says service to the nation came first. In a posting to the VHF Reflector, Marek says the Navy compressed a four week pilot training event into two weeks. As a result he wound up working 18 straight days of 12 hour or longer shifts helping to train US pilots for their missions.

This task completed, Marek, has finished assembling the new beacon and has K7XC slash B running 10 watts into a Ringo Ranger from his home in grid DMZ09. He hopes to find a mountaintop location and a horizontal antenna for it in the near future. A 432 MHz beacon at the same location is in the works as well. (VHF Reflector)

**

HAM RADIO AND THE WAR: HEALTH CONCERNS CAUSE CQ TO ASK CONTESTERS TO E-MAIL LOGS

This is Rich Moseson, W2VU, Editor of CQ magazine, with a message for anyone planning to participate in next weekend's CQ World Wide DX Contest, or any other CQ-sponsored contest.

Because of security concerns, we are asking everyone who submits a log for our contests to do so by e-mail. The rules for each contest give you the appropriate e-mail address. Logs received through the mail at the CQ offices will be held unopened until all potential health risks have been evaluated. We cannot guarantee that these logs will ever be opened.

We know this will inconvenience a small number of participants in our contests and we regret the need to make this request. But our logs come from all over the world, and even from Trenton, New Jersey. And while the risk that amateurs might be involved in any sort of terrorist activity is very small, mail en route may be subject to tampering. We cannot ask our staff members or contest committee volunteers to possibly expose themselves to dangerous packages sent through the mail when there is an alternative.

We've already received several e-mail messages critical of this request, suggesting that we are giving in to terrorists. We don't see it that way. We are not canceling the contest. But we are taking reasonable precautions to protect our staff from what is, based on this week's news, a very real and fast-growing threat. (CQ Magazine, W2VU)

**

ENFORCEMENT: PART 15 VS HAM RADIO

Interference to a Washington state two meter repeater has been traced to a legal albeit faulty Part 15 device. The Portland, Oregon FCC office recently investigated interference to the Clark County Amateur Radio Club repeater in Vancouver operating on 147.84 MHz. The interference was traced to a Gemini model V C 2000 Part 15 video transmitter located about one mile away. The owner was contacted and voluntarily removed the device from service. Interference gone. Case closed. (Portland SBE Bulletin)

**

EMERGING TECHNOLOGY: SATELLITE RADIO VS. RF LIGHTING

A major battle has developed between the deliverers of satellite radio and a company that will soon manufacture R-F lighting. This, as XM Satellite Radio and Sirius Satellite Radio ask the FCC to reduce the level of allowed emissions from a particular new model of outdoor light bulb to reduce potential interference to satellite delivered radio signals.

The trade publication Radio World reports that Sirius and XM have specifically asked the FCC to require that Fusion Lighting lower the bulbs radio frequency emission levels y 99.9% of current levels. According to Radio World, Fusion's R-F lamps are designed to operate in an unlicensed portion of the microwave spectrum. Unfortunately, the lamps hold the possibility of interfere with S-band communications channels used by satellite services.

But Fusion says that granting the request would be undue overegulation and effectively put the company out of business. They say that the microwave powered lamps are still in development and at least a year from commercial sale.

Reportedly, the FCC has already spent several months trying to resolve the dispute. So far, no resolution. (Radio World)

**

EMERGING TECHNOLOGY: PAY TO LISTEN TO OLD ART BELL RADIO SHOWS

If you are a fan of Art Bell, W6OBB's, "Coast to Coast A-M" radio program and you miss tuning in one night, its going to cost you money to hear a repeat of the show on the world wide web. This, after Premiere Radio Networks announces that as of Monday October 15th there will be a fee to access old shows.

According to the Premiere announcement the longtime free audio streaming has disappeared and has been replaced with a new $6.95 a month subscription service called Art Bell's StreamLink. With StreamLink you can listen anytime you like to any Art Bell Show from the last 30 days.

Not everyone is happy with the decision to charge including Bell. According to a posting to his website, it was not his decision to change the free Internet access. Rather it was a decision made by Premiere based on cost.

Bell says that there are now millions of people on the Internet and bandwidth costs money. About $1.5 million per year for all the Premiere shows. He says that Premiere hopes to break even.

W6OBB says that he has been receiving many angry e-mails and that he understands the anger at having to pay for what was free. But he also understands the company cannot continue to cover the ever growing cost.

Bell adds there is at least one bright spot. Says W6OBB, "it is still free on the Radio."

More information is on the web at www.artbell.com. (Art Bell Website)

**

SPECIAL EVENTS: JOTA 2001 AND THE ISS

If you are hearing this newscast between 0001 local time on Saturday, October 20th, and 2359 local time on Sunday, October 21st, then as soon as its over get on the air to contact the Boy Scouts Jamboree On The Air 2001. Several hundred thousand Scouts and Scout Leaders and others are expected to be on around the world for this annual event.

Listen for scouts on 3.740 and 3.940 on 75 meters, 7.270 on 40, 14.290 on 20, 21.360 on 15, 28.390 MHz on 10 plus the WARC bands.

And as a special added attraction, International Space Station Commander Frank Culbertson, KD5OPQ has said that he will try to make some general QSO's for the scouting Jamboree. He will operate on the usual ham radio space to ground

frequencies. Because of Culbertson's limited time on the air, non-scouting stations are being asked to give preference to scouts trying for a contact with KD5OPQ on board the ISS. (Q-News, SAREX Remailer, K6DUE, KC6ROL)

OUR HERITAGE: RADIO PIONEER DONALD HINGS

Tom Farley, KD6NSP writing in the CGC Communicator notes that he is always trying to publicize radio pioneers that have not been written about. One of these is Donald Hings whom Farley describes as a Canadian wireless inventor who came up with an early form of the walkie talkie and played a big role in the Canadian and British war effort.

Unrecognized compared to people like the late Al Gross, Hings was recently presented with the Order of Canada by her Excellency, the Right Honorable Adrienne Clarkson, the Governor General of British Columbia.

His granddaughter has built a nice web site to honor his radio accomplishments. Its at http://sitka.triumf.ca/morgan/dlhings. (CGC Communicator)

**

OUR HERITAGE: THE SOUTHERN APPALACHIAN RADIO MUSEUM

According to an Internet posting by John Travis, W4QCF, if you like old radios, there is a new museum just for you. Called the Southern Appalachian Radio Museum, its located in Ashville North Carolina and is described as a dream come true for many years for members of the Quarter Century Wireless Association Smoky Mountain Chapter 145. The sponsoring group also recently received the club call W4AFM, which once belonged to Bill Hayes who was licensed in 1926. You can get a glimpse at what's there by visiting the museum website at www.saradiomuseum.org. The real world museum is open every Wednesday evening and John Travis says that you are invited to come and see it. (W4QCF)

**

NAMES IN THE NEWS: W6VQP NAMED FELLOW IN THE RADIO CLUB OF AMERICA

The Radio Club of America has announced its list of names to be inducted as Fellows in the organization. Among them is one well known to anyone who remembers the very early days of our news reporting operation.

One of the 20 inductees for the year 2001 is Radio Design Group president James R. Hendershot. Ham radio oprerators better know him as Jim Hendershot WA6VQP, the founder of the Westlink Radio Network. Westlink Radio was the original

name of the Amateur Radio Newsline when we first went on the air way back in 1977. (ARNewsline™)

**

INTERNATIONAL - IRELAND: NEW TELEPHONE TECHNOLOGY COULD CAUSE RFI

New high speed telephone technology in Ireland has been announced by their regulatory agency Eircom. The new system will provide Internet access using ADSL brand named 'I stream' using existing phone lines with subcarriers in the range 100 kHz to 1.1 MHz. This will allow faster speed downloading from the Internet and allow for existing voice calls to be carried on the same phone lines in the range 0 to 4 kHz.

But there is a downside. A large number of reports from United Kingdom trials show that radio receivers placed near the phone lines will have strong interference in the Long Wave and Medium Wave bands. There also may be interference in the High Frequency bands. And the system may be susceptible to interference from High Frequency transmitters as well. More details are available at www.eircom.ie. (IRTS, Q-News)

**

DX

In DX, C98RF in Mozambique has been really active on 30, 12 and 10 meters. Watch 12 meters from 1100-1730 UTC, 30 meters after 2100 UTC and 10 meters very early after 0900 UTC. QSL via DL6DQW. (OPDX)

And ET3VSC in Etheopia has been pleasing many CW operators over the past week with activity on 12 and 10 meters. Look for him between 1830 to 2130 UTC on either band. QSL via K3IRV. (OPDX)

**

THAT FINAL ITEM: WHO REALLY WAS SAMUEL FB MORSE

And finally, we started this weeks newscast with reference to the Morse Code. There is no need to tell anyone that the Morse code is synonymous with ham radio. For almost a hundred years the “code” has been such an integral part of the Amateur Radio service that for some in the hobby its a way of life. To others it was a dreaded obstacle to upgrading to a higher license class until restructuring capped the test speed at 5 words per minute. Yet without the code there might never have been ham radio because its use preceded voice transmission by many years. Even so, there are probably very few in the hobby who know much about the man behind the dots and dashes. But as Amateur Radio Newsline’s Henry Feinberg K2SSQ tells us, the code is only a small part of the story of the man:

--

Samuel Finley Breese Morse was not a ham radio operator. In fact, radio was more than a century away when he was born on April 27, 1791, in Charlestown, Massachusetts.

His childhood is described as almost mundane. He was the son of Jedidiah Morse, a church pastor who was as well known for his abilities in geography. A close family friend was Noah Webster who was equally known for his dictionaries.

Morse attended college at Yale where he is described as having been an indifferent student. But his interest was aroused by lectures of the then newly-developing subject of electricity. After college, to the his parents dismay, Morse directed his enthusiasm to painting which he studied in England. After settling in New York City in 1825, he became one of the most respected painters of his time.

In 1832, while returning by ship from another period of art study in Europe, Morse heard a conversation about the newly discovered electromagnet and conceived of the idea of an electric telegraph. By 1835 he probably had his first working model in the New York University building where he taught art. Being poor, Morse used such crude materials as an old artist's canvas stretcher to hold it, a home-made battery and an old clock-work to move the paper on which dots and dashes were to be recorded.

In 1837 Morse acquired two partners to help him develop his telegraph. One was Leonard Gale, a quiet professor of science at New York University and Alfred Vail, a young man who made available both his mechanical skills and his family's New Jersey iron works to help construct better telegraph models. With the aid of his new partners, Morse applied for a patent for his new telegraph in 1837, which he described as including a dot and dash code to represent numbers, a dictionary to turn the numbers into words and a set of sawtooth type for sending signals.

By 1838, at an exhibition of his telegraph in New York, Morse transmitted ten words per minute. He had dispensed with his number-word dictionary, using instead the dot-dash code directly for letters. Though changes in detail were to be made later, the Morse code that was to become standard throughout the world had essentially come into being.

During the next few years Morse exhibited his telegraph before savants, businessmen and committees of Congress, hoping to find the funds to give his telegraph a large-scale test. He met considerable skepticism that any message could really be sent from city to city over wire. On his own, in 1843, without significant help from his discouraged partners, Morse finally secured funds from Congress to construct the first telegraph line in the U. S. from Baltimore to Washington D.C. Morse directed the wires to be mounted on poles and by May 1844, the first inter-city electromagnetic telegraph line in the world was ready. Then, from the Capitol building in Washington, Morse sent a Biblical quotation as the first formal message on the line to Baltimore These were four words that changed the world of telecommunications forever. The four simple words: "What Hath God Wrought!" And trhe rest -- as they say -- is history.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

By the way, some of the information in this story came from the Locust Grove Samuel Morse historical site at www.morsehistoricsite.org. If you want to

learn more about the man and his contributions to society, we say its well worth a visit. Its one of the best. (Various Morse related websites)

>
> Told ya.

The numbers grew steadily until March 2001, then started downward. The main cause of this is clear: The oldest of the post-Feb 1991 Tech licenses expired in that month. AH0A's site shows renewals and expirations by class, and Tech is not combined with Tech Plus in those columns.

To attach some numbers to the trend, note that for the 7 months from March to September of 2001, 5225 Technician class licenses expired and 9724 were renewed. Of the expired licenses, 1043 renewed in the grace period, so a more accurate count is 10,767 renewed and 4182 expired wihtout renewal. That's a 72% renewal rate.
>

Too soon to tell for sure.
>
> I offered a solution a year ago, but it was ahead of its time, and
> probably still is.

Actually, your "Colt" idea was behind its time. The time for it was 1998-1999, when the FCC was asking for ideas and input on its restructuring NPRM. After wading through over 2000 comments and numerous proposals, the FCC wasn't about to start all over again six months later.

The other problem with your idea was that it was way too restrictive. The privileges granted were too limited, and the age restriction is just not a good idea. (Note that some folks (NOT ME) support the idea of a minimum age of 14 for a ham license!)

But the basic concept you promote is worth developing. As I understand it, the idea is a sort of super-simple beginner license that doesn't require testing the wide variety of technical and regulatory stuff that the Technician now requires. Here's one idea:

At some time in the future, it is likely that the code test will disappear entirely. If nothing else is done, we'll wind up with a license structure that is a holdover from an earlier time, for no good reason. The idea of an easy beginner license should be part of a general rethinking of the license structure, looking forward.

One way to structure it would be to have a "Basic" license that gave a set of limited privileges on MF/HF/VHF/UHF. "Basics" could be limited to segments of the bands that are worldwide exclusive amateur, allowed relatively low power so that RF exposure questions are minimized, and perhaps limited as to modes. The idea is that beginners of all ages could get a license that gave them a good set of basic privileges to get started.

There would then be more comprehensive tests for licenses that gave full privileges.

Perhaps the bands could be divided into subbands by mode - CW only, digital only, and analog voice/image only. The Basic would grant limited access to parts of these subbands, and higher class endorseements (say, "Telegraph", "Digital", and "Phone") would grant full privileges on their respective segments. The tests for these endorsements would be specific to those modes.

The main point is for us to begin rethinking the license structure in advance, rather than after the fact.

> But, mark my words, eventually the Amateur Service
> will be FORCED to implement something similar to what I've suggested.

Forced by whom?

> Either that, or the FCC will eventually auction off or open up most of
> the virtually unused VHF/UHF frequencies(other than a few high-level
> repeaters, these bands are basically dedicated to a sea of unused
> closed repeaters), where they can be put to good use.

Around here, most repeaters are open.

My favorite is the one in which a protestor tries to burn an American flag and
sets himself on fire. The caption reads:

One American flag - $25
One can of gas - $2
One lighter - $0.50
Seeing some a$$hole set himself on fire trying to burn the flag - priceless.

6089. Re: Complements and Compliments

>>>Is my observation not true? What is wrong with stating the truth?
>>
>>Delusional. You state personal opinions as if they were TRUTH.
>
>You just demonstrated a textbook example of the ad hominem fallacy, Len. You
>attacked the messenger, (me) rather than analyze the message. In fact, you
>completely snipped the message.

The messenger (you) stated an observation as "truth." Then
the messenger (you) asked why not state such a "truth."

It is not a truth just because the messenger (you) says it is
the truth. The delusion is thinking that whatever you think is
the truth.

>I'm not delusional. I simply posted some observations that you don't like. I
>think those observations are true - otherwise I wouldn't have posted them.
>>
>>Sorry, your godhood, they are just opinions.
>
>They are observations. If they are not true, why don't you show why they
>aren't?

The messenger (you) does not seem to understand when
something is proven NOT true. The excuses and misdirections
for this make for extraordinarily long postings. The delusional
cannot be dissuaded from their false path.

>It is interesting that in one post you call me an idiot and a few days later
>you call me a god.

"God" in that case was in sarcasm. The "idiot" part remains.

The delusional behave as idiots, sometimes as egocentric
idiots.

>..... But you don't want to deal with the
>reality of a ham who is also an EE, has mastered both Morse code and the
>Smith Chart, and who isn't intimidated by you.

BWAHAHAHAHAHAHAHAHAHAHAHOOHOOHOOHOOHO!!!!!!

Good heavens, NO. I don't have enough time to spend on pointing
out your errors, spin, and presentation of amateur mythology as
"truth" when it isn't anything more than mythology. I won't waste

anymore time answering endless "arguments" and misdirections or claims that knowing basics are "mastery," post-graduate or not. I've been around the industry and have shared information and knowledge both ways with all ranks, including PhDs, all who did not wave credentials as surrogates for "mastery" of "having mastered" something.

Stay rooted in the past and its mythology. That way is fhe safe way where you won't feel intimidated by anything or anybody since it has all happened. You can interpret the past safely and spin endless more spin on "why" it should always be so. Change is your enemy. Looking to a future where things have changed is your enemy. Fight them with all your might. There are others who will enter that future who will do things differently than you, embrace new technologies and accept them. Those of the future will not glorify the past and past technology as religious myths as is common among certain old-timers.

>>The first of the "scientific" pocket calculators, the HP-35,
>>appeared on the market at the beginning of the 1970s.
>
>1974-5. It cost almost $400 and ate batteries fast. Classmate of mine had
>one.

The HP-35 was made and sold from early 1972 to 1975.
Advance word and select look-see was available in late
1971. Initial cost was $395 in single quantities, $225 in
quantities of 100.The HP-45 was better, cost $395, was
made 1973 to 1976. The HP-35 single-unit price was
reduced to $295 at the introduction of the '45.

While at Naval Air Development Center in 1972 I had a chance
to talk to the H-P representative that called on NADC. His
territory included Bell Labs, Holmdel, NJ. He was very happy
on selling 700 HP-35s to Bell Labs for use by their staff. They
would be given out FREE to staff that could use them. 700.

We can now compare the engineering expertise of Bell Labs
against a "classmate" and determine the apparent "faults" of
the HP-35?

RCA EASD arranged for a group purchase for engineering
staff in 1973, $225 each, no profit to the company. The three
of us who already had HP-35s were given a $170 rebate.
That was the least RCA could do since all three of us had to
endure all those nagging borrowers.

But, you will no doubt tell me your "classmate" knew more
than anyone and the slide-rule (3-place maximum accuracy
for a 12") was "better."

I still have my HP-35. It works on AC or my own battery
pack. Some of the faceplate lettering has worn off. I had an
HP-25 for two years, sold it to my Technician at Teledyne
for half price...Gene got copies of my microwave programs
written for it and had a ball doing accurate plottings with it
plus learning the basics of step programming. My HP-67
programmable (replacing the '25) still works except for the
card reader (no replacement parts six years ago), some of
the snap in the snap key switches is gone and the
faceplate lettering is likewise worn from use. There's only

one battery pack left ('35 and '67 took the same kind) and
the NiCad battery technology was never all that good in
early days, "smart chargers" not appearing until the very
late 1990s.

My present-day "slide rule" is the HP 32SII, uses non-
rechargeable coin batteries, has an LCD display, is
programmable and all the memories are "keep-alive" after
turn-off. I store constants like 2pi (for radian frequency
conversion) in it without fear of losing them. It handles
complex quantities of add, subtract, multiply, divide,
invesion and power as if they were scalar as well as the
polar-rectangular conversion existing since the '67. The
original batteries are still in there, it is light and rugged,
having survived two cross-country trips to the midwest
and three coastal trips to Washington and back. It cost
all of $60, a fair-trade price at Fry's, Office Depot, or
Office Max.

>>That was 30 years ago. The "younger engineers" (who
>>have not used a slide rule) are now bumping up against
>>the age of 50! :-)
>
>Most of us in the engineering classes of 1976 or so used slide rules because
>the early calculators were expensive and prone to battery failure at
>inopportune times. In a few years things changed to the point where a
>calculator cost less than a good slide rule. End of story.

NO. NO. NO. Not the end of the story, just the beginning.

The HP-25 (no C suffix), product life 1975 to 1978, was
$110, and featured 49-step programmability. You can see
five HP-25 programs on handling transmission lines in the
May 1978 issue of Ham Radio magazine. If you have a
TI-58 or TI-59 you can see similar programs in the following
article by another Anderson (late editor Jim Fisk's little
joke...:-)

The HP-25C was introduced in 1976 as the '25 with
continuous memory through the innovative (for its time)
use of a large capacitor to keep the CMOS memory
"alive" even when the battery case was opened, the
battery pack replaced. This became a standard feature
with all pocket calculators later. Cost was $125.

What was overlooked by many in 1972 was that all users
had 10 digits of accuracy for ALL functions, transcendental
and logarithms included. Not even a 1-foot cylindrical slide
rule could approach that versatility or accuracy.

Those that bitched about battery life in the early 70s had
to simply follow battery life and charging rules. At the time

the only cheap rechargeable battery was NiCad. Those
that turned on their calculator and forgot to turn it off until
the next morning wound up with bad battery packs. TS.
Each rechargeable-battery calculator had an AC adapter
for either charging or running the calculator, adapter part
of the price. An extra-cost item was a battery pack
holder for charging a second pack while the first was in
use.

Rockwell International had an inter-division cooperative
of shared calculator programs for the '67 to the '41 models
during the 1980s. In the 1970s the PPC or Personal
Programmable Calculator organization had a monthly
newsletter which featured shared programs, care,
explanations of programs, mods, and "secret" program
steps to add "letters" to the numeric display. I had some
contributions to this largest of all private US calculator
user organizations, including an explanation of perspective
plotting trigonometry that was included in the HP
Calculator Library. You will find nine other programs of
mine in that Library...but only a few library collections
exist since the Corvallis, OR, H-P division dropped the
Library over a decade ago.

>>>And to a certain extent, that's the function of the Smith
>>>chart these days. But it's more than just a relic of bygone
>>>technology. It also provides a conceptual model for the
>>>impedance/admittance transformations that take place through

>>>in the intuitive insights it provides the user rather than
>>>in the precision of the calculations done with it.
>
>Yup. Just like Morse code and ham radio.

<insert at least a half hour of racous laughter at that non-analogue>

Try to explain why the Smith Chart is STILL IN USE IN THE
RF INDUSTRY. Try to explain why the Chart format is
still present in TODAY's network analyzer front panel
displays.

>>Vacuum tubes, slide rules, and steam engines...along
>>with morse code skill...are becoming artifacts which are
>>quaint, amusing relics of a bygone era.
>
>It is interesting to see how you demean and denigrate them. Says a lot. You
>want to tell us what we should like and dislike.

NO, NO, NO. *YOU* and other PCTAs have kept insisting
that everyone wanting to get into amateur radio MUST LIKE
WHAT YOU LIKE. You and other PCTAs think that amateur
radio is "all about morse code." You and other PCTAs think

that lack of skill or desire to use morse code is "dumbing
down." You and other PCTAs insist that morse code skill is
the epitome of amateur radio skill.

You and the PCTAs have been telling everyone else what to
be, what to like for years. You and the PCTAs simply don't
want to give anyone any freedom in modes.

>Vacuum tubes are still in wide use. Ask anyone with a CRT. Or a high-end
>stereo.

Wrong use of "wide" in the entire electronics world. I've
been using an oscilloscope with a flat screen. No CRT.
My 1982 Philips 50 MHz scope is gathering dust. It has
a vacuum CRT...but every other circuit in it is solid-state.

At home we have two "high-end" music systems (civilians
call them "stereo"). Actually three if the monaural one is
counted. All of them are solid-state.

Yes, all three TV sets use vacuum CRTs...which is the
extent of their vacuum tube use. After four decades of
design improvement, including computerized alignment of
the shadow mask and deflection, are relatively cheap.
Everything else in the TVs, the VCRs, the 200+ channel
digital cable decoder box is solid-state. Both high-end
PCs are all solid state except for their CRTs...and now
there are TFT flat screens for under $300 in 15-inch size.
It's kind of a toss-up whether we get TFTs for the
computers' present-day 17 inch monitors or budget for
a MEMS projection TV that is HDTV compatible.

My "old" Icom R-70 is all solid state unless you want to
endlessly repick nits about the gas-discharge numerical
display. It ain't vacuum in any way, sport.

>Most of the electricity generated in the modern world is the result of steam
>engines (turbines) driving alternators.

"Steam engine" in the modern verhacular refers to
RECIPROCATING engines...you know, like the old
locomotives called "choo-choos" by kids. Find me a
steam locomotive on the railways today that carries
freight and/or passengers. Only the rare tourist
attraction or an outdoor museum has them. There's
a railway museum just 4 miles from here in Griffith
Park, quaint and fun for kiddies, and an arboretum
that has a neat little kiddie ride with a miniature
reciprocating steam engine, wow! Two major railways
go through the eastern end of SFV here and neither
one has felt a steam choo-choo for years.

>Morse code still appears as a standard feature in modern HF/MF amateur radio
>transceivers and is still being used by today's hams.

Used by SOME. That is still NOT a reason for the license
test requiring tested manual-aural skill...not by the FCC and
now not considred meaningful by the IARU!

It's a losing argument full of holes that you present. You won't
give up because you don't know how to grow with the times
and your ego prevents you from captitulating in any way.

It might, if capitalism has anything to do with it. To tell you the truth Cecil, I'm not a big fan of the war on drugs either. The best way to stop foreign countries from selling drugs to the US would be for the US to stop buying them.

The point was simply that we have been sending money to folks which have used that money to fund their terrorist activities. Get it?

Reckon most of the money financing the terrorists came originally from
the US either directly or indirectly involved with oil?

At least we got something in exchange for the oil money. What did we
get in exchange for the $43M "war on drugs" money - aside from a well
armed and well funded Al Quida network?

Well, some don't think copyrights "exist," but the laws on
copyrights are still in effect. As far as I know, Kay Electric
has the copyright on the Smith Chart as a chart although
someone else may have bought it (not sure). Ask Roy
Lewallen on his copyright of EZNEC...he has rightfully
complained of pirated copies of his antenna analysis CD
floating around hamventions.

>What about the white folks who might be terrorists? How could we tell them?

Asked and answered. However, being "politically correct" with regard to our
security will not help us to ensure our security. We cannot fail to closely
examine the actions of certain individuals just because they look like the
people who committed the terrorist acts of Sept. 11. I know that I, for one,

will never look at a person of Arab descent the same way, but that doesn't mean I'm assuming the worst about them. I'm just going to be more alert to anything they may be doing which seems out of the ordinary. And that applies to non-Arab looking people as well.

Dick, Dick, Dick. Do you think that the *only* terrorists there are in this world are bin Laden et al? Do you *really* think that it's going to stop at him? Do you *honestly* think that?

You see, some of us are looking well beyond the noses on our faces. I'll ask you one more time: Is the KKK a terrorist organization? How 'bout the Posse Comatatus(sp)? How 'bout the Nazi Party (and the many derivatives thereof)? How 'bout the Citizens in Solidarity with the People of El Salvador (once labeled a terrorist organization)? Give us *your* list of terrorists once the bin Laden gang is taken care of. You've been told, I've been told, we've all been told that terrorism is going to be stomped out--once and for all. Do we stomp it out just in everyone else's borders, or do we do ours as well?

Just some clarifications I am looking for--if you just happen to have thought beyone the nose on *your* face.

On the other hand, some seem to think that holding a copyright gives them absolute control over any use of anything even vaguely like their creation; they're also wrong.

> As far as I know, Kay Electric
> has the copyright on the Smith Chart as a chart although
> someone else may have bought it (not sure).

At best they could claim copyright on the exact layout of their particular version of the chart -- where the minor and major ticks are in the scales, the exact words, exactly where the various curves get left off when they get too close together at the right hand side, etc. Basic ideas -- like "plot constant resistance and reactance curves on a polar coordinate system where the radius is the SWR ratio and the angle is the phase delay" aren't copyrightable. They are often patentable, but in this case the patent has expired.

> Ask Roy
> Lewallen on his copyright of EZNEC...he has rightfully

> floating around hamventions.

But I'm sure he doesn't think his copyright prevents other people from writing their own antenna programs and selling them, even if they turn out to give the same answers. If it had exactly the same screen displays, input formats, etc. he might have a case even if the actual code was different (this is the "look and feel" copyright issue Apple tried to sue Microsoft over.)

Kim:

What you fail to recognize is the fact that while crime is an ongoing problem in our country, we are also actively engaged in the ongoing response to crime -- through the operation of our criminal justice system. The present focus on the 9/11 incidents is different because this is something relatively unusual in the American experience -- a direct attack on our homeland with a high cost in human lives and economic impact. Every country has it's internal problems, such as crime, and countries that are equipped to deal with them do so through the application of law. The only way to deal with an attack of the 9/11 magnitude is to go to war against the people who caused it, which we have now done. And, as we have an ongoing response to crime in place and operating, we will now have to establish an ongoing response to terrorism as well, through the Office of Homeland Defense created by President Bush, and led by former PA Gov. Tom Ridge.

Dick:

I think the answer to the cost of fighting the War on Drugs is a simple one.

1.) Make all presently illegal "recreational" drugs (marijuana, cocaine, heroin, etc.) perfectly legal to possess and use.

2.) Allow companies, such as the present tobacco companies, to manufacture and sell such drugs under strict federal control and levy high taxes on them.

3.) Provide absolutely NO government support for the "victims" of the legal use of such drugs. No medical care, no rehabilitation, no protection from being fired, NOTHING. Create a situation where the users of recreational drugs are free to do so, but must accept 100% of the consequences of their actions every step of the way. The government will use the tax revenue gained from the sale of "legal" recreational drugs to build more Tomahawk missiles, buy more F-22A Raptors, increase pay and benefits for the military, build roads, bridges, and tunnels, and anything except provide a single penny to the "victims" of legal drug use, their families, or anyone connected with them.

4.) Pass laws placing 100% of the negative consequences of "legal" recreational drug use squarely on the shoulders of the users, REGARDLESS of any mitigating circumstances. You get rear-ended by another non-drug using driver, and test positive for any "legal" recreational drug -- YOU are 100% at fault and pay 100% of the damages out of your pocket.

Now, before you think about "surrendering" the war on drugs, think about how much it would cost the average, non-drug using driver to get a basic liability auto insurance policy under the above conditons! Believe me -- it costs far less for us to fight the War on Drugs than it would cost us not to!

What you fail to recognize, Larry, is that this "war on terrorism" was created under extreme measures and is sure to fail--maybe not in terms of snuffing out Al Queda and bi Laden et al but, certainly in terms of snuffing out terrorism.

I don't see how any of this "stuff" that's been going on now for a little over a month can sustain itself, either in interest from the American people, save whatever political arguments/actions there end up being over all of this. Our military will continue on and we'll end up with oh, maybe, once every-other-day-or-two updates from the media on what they did.

I don't think it's any more major than that. I look at *no one* any more differently today than I did, and I really think all this reactionary stuff that's going borders on ridiculous. The first couple of days after the incident I admit I was quite concerned. But, then I just thought about it and decided that there's not a whole hell of a lot I can do about it--and I sure as all hell don't want to spend waking moments on what ifs. The terrorists that struck the WTC (in my opinion) never in a million years thought it would collapse those two buildings. The anthrax "scare" that's going on would surprise me to hear if it is connected in any way to this particular group/incident.

There's just a lot of sickos running around in our world, your world, my world, and the world. It's a part of life, just like the fact that we now deal with fear of killing in our schools, we will learn that terrorism has a lot easier entry as we become a more global world.

By the way, I don't like the idea of the Homeland Defense office. We've got CIA, FBI, BATF, NIS, and a whole bunch of other alphabets running around already. I feel no safer with a Homeland Defense office than I do with any of the others.

Our greatest challenge in this free land, the wonderful world of the United States of America, is to learn that freedom has a price attached to it that we must *all* realize and be willing to confront. Added to that is the challenge that we must realize that the sickos in this world get far more than their 15 seconds of fame; and we need not lend them any more time than they deserve.

I am not particularly worried about the addicts either; like the poor they will always be with you and they will be with you in general until they face the consequences of their own actions. Having dealt with a few drunks I have no particular urge to enable the practice. There are, however and in contrast to Hillary, limits to the effectiveness of the judicial process. In your state and mine there are about 1% of drivers, all known unto DMV, who can be predicted to be involved in a serious death/maiming within 5 years with an error rate attributable only to the grace of God.

But the Drug War has victims outside of the addict. We have prisons full of low-level dealers who if the studies are correct, never made minimum wage doing it. I am not particularly interested in supporting them at about 30k a pop per year plus the rent on a $100k cell unless there is no alternative. There is, as they say, no cure for stupidity but one questions just who is being stupid.

What has happened though are at least three really bad effects:

1) Drug running supports everyone from FARC to the IRA including the Taliban and more than likely ben Laden. My initial suggestion was to take the profit out of it. This implies some form of government intervention up to and including buying enough to make a pure and known product available at a price that bites but undercuts the present cartels. Taxing is fine but in my lifetime one in three bottles of Canadian Club was actually bootlegged. Until the alcohol tax became farcical by sheer inflation old Snuffy Smith ran his still.

2) It has toppled governments and is in the process of toppling more worldwide. This includes Mexico and Columbia for sure but has been a factor in a number of others. Just as with pirates it is the duty of a country that harbors terrorists and druggies to stop them and deliver them up. When a country won't (as in the present case) or can't it is the privilege of others to repair this lack of sovereign control. Nothing new about that: Afghanistan and the Barbary pirates are one and the same although there is some evidence that the US simply lacked the hard money to buy the pirates off and took up shooting. But I am not sure I want to spend the lives and money to police the world.

3) Just as it did in the 20s prohibition has corrupted every police operation in the US and a good number of related government institutions. There is just too much money involved. Where they are not directly on the take, the gendarmes are looking for something to confiscate to buy new gizwidgets for the department.

Not to mention that a lot of innocents are killed in drug wars, drive bys, etc as gangs fight for turf and a lot of things are stolen to pay for the drugs. Again, money begets violence.

No, I really give rat tits for the addicts so long as we can keep them from threatening public health and safety. But I am really worried about corruption and financing sociopaths.

> accept them. Those of the future will not glorify the past and
> past technology as religious myths as is common among
> certain old-timers.

You can look to the future all you like, Len. Change seems to be your
friend. Take your self appointed "advocate for change" role in
attempting to remove morse testing from a radio service in which you are
not remotely involved as an extreme example. You've often accused those
who hold some amateur radio traditions dear of living in the past.
I think you have it screwed up. We licensed hams are living in the
present--enjoying amateur radio daily or weekly. You can continue to
live in the future, where you might possibly become an amateur radio op
some day.

If the unit activated is a brigade as you say in the sentence directly above this, why did you mistakenly say "battalion" in your response to me (first paragraph above)? Anyone in the Army would know there is a significant difference between a battalion and a brigrade. And certainly anyone actually in that unit would know it is a brigrade, not a battalion. A mistake like that is certainly enough to cause people to wonder if you're telling the truth.

> (snip) Let's see what some experts

I don't care what the "experts" at CNN and Fox News have to say. When it comes to the military, the military is the expert. And the

Army's web site at...

http://dsc.mtmc.army.mil/AboutDSC/WARTRACED.htm

... said the Army RESERVE unit activated (1179th DSB) is a brigade, not a battalion. Again, you should know that is you're actually in that unit.

>
>The maximum-ever total US ARS licensing peaked in March, six
>months ago. The trend as been a continual, small loss in total
>numbers since March.

Total US ham licenses, from AH0A site:

May 2000: 677,348
March 2001: 684,359 (growth of 7010 from May 2000)
September 2001: 682,933 (drop of 1426 from March 2001)

>Since 1998, the growth in total US ARS licensees has been
>due to the no-code-test Technician class, roughly 10:1 more
>Techs v. all other classes combined. This can be seen by
>the un-spun AH0A tabulations up to ULS changeover.

How do you figure?

Per AH0A:

In January 1998, the number of Techs was 180,665
In July 1999, the last time AH0A shows Techs and Tech Pluses separately, number of Techs was 198,467

But unlike all other classes, none of the Tech licenses back then expired.
>
>The "standard argument" that "the numbers aren't changing"
>is either wishful thinking or some spin saying "extras grew
>the most" (while not demonstrating they are class changes
>from so-called "lower" classes).

These are the number of unexpired FCC ARS licenses held by individuals on the dates listed. They are NOT from the AH0A site. Note that it is still possible to separate Tech Pluses from Techs:

These numbers do NOT overcount expirations.

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

Total Novice/Tech/Tech Plus: 383,583
Total General/Advanced/Extra: 291,209

As of October 17, 2001:

Novice - 40,893 (decrease of 8,436)
Tech - 231,497 (increase of 26,103)
Tech Plus - 87,716 (decrease of 41,144)
General - 138,164 (increase of 25,487)
Advanced - 86,915 (decrease of 12,867)
Extra - 97,346 (increase of 18,516)
Total - 682,531 (increase of 7,739)

Total Novice/Tech/Tech Plus: 360,106
Total General/Advanced/Extra: 322,425

>The AH0A tabulations confuse the issue by combining the
>code-tested Tech-Plus with no-code Techs after April 15th
>restructuring.

Yup. But there are other sources of the data that keep them separate.

There is also the issue of the FCC renewing Tech Pluses as Techs.

>Up to that point in time, the separate tabulations
>by class showed that growth in ARS licensees was all due to
>the no-code-test Techs.

"All"?? Nope.

Per AH0A, from June 1997 to July 1999, the number of Extras grew from 73,737 to 75,166. That's a growth of 1429, or about 2%. The Sep 2001 number of Extras per AH0A stands at 97,227. The trend in the Extra and General classes has been steadily upwards since April of 2000.

>The combined Tech tabulations now
>indicate a fall-off of the "Tech-Tech" numbers which is mostly
>due to Tech-Plusses "upgrading."

That is partly true. There is also the effect of Technician expirations. For the time period March 2001 to September 2001, AH0A lists 9724 Tech renewals, and 5225 Tech expirations. There were also 1043 Tech renewals in the grace period, so the corrected numbers are 10,767 Tech renewals and 4182 Tech expirations in that time period. That's 72% renewal rate for Techs.

>There are no significant
>trends in the non-renewal of no-code Techs despite all the
>previous assurances that their numbers will drop.
>
72% have renewed so far.

Note that the number of expired Techs is 4182, but the decline in total ARS licenses is only 1426.

>

This *might* be just a little tipped. There's two months lacking between May and March 2001 (doubt it would have been enough to tilt it the other way, but still). The other thing is, what was the total in September 2000 to September 2001. That evens out the numbers (probably the same trending though). I don't think it's ever really a surprise that the numbers of new hams goes up through the Fall and Winter months, nor that there's a drop in new hams during the Spring and Summer months. Even here in Texas, Fall and Winter see less participation in "hamming" than in the Spring and Summer.

Another thing I'll throw out (just as a hrrumpphh) is that I think, many times, when folks post things that seem to predict and prove the decline in ham radio--it is to somehow lament and enforce the opinion that restructuring did no good so why have done it? The same argument could be made that since restructuring did no good, it also did not harm then, did it? :)

Want to hear some Steve Anderson "6.900 UPR"
emulators on the high frequency ham radio bands?
Listen in to the Eastern United Patriots Network on
3.860 mHz at 8:00 PM on Monday Tuesday, Thursday
and Saturday nights. Ham radio Lower Sideband
3.860 mHz. Three people on there stand out as quite unbalanced in
the head. True candidates for the mental health unit.
One guy in Pa in particul;ar sounds just like he needs Prozac
saying all kinds of nasty things about
law enforcement and the "gubumint" and other such stuff.
Hopefully the FCC and the FBI are monitoring this group
like they did Anderson's looney broadcsats too.

Ba cause trying to respond to an Anderson post makes me mess up. It's so
hard to maintain composure when I read the merde this guy dishes up.
Next time I'll try to be p[erfect like you Dwight, although I am sure
it's not a NY type of thing to be perfect like you Dwight.

So just for your edification there Dwight of Conway, South Carolina (home
to a through road to Myrtle Beach)

Main Entry: 1bri&#65533;gade
Pronunciation: bri-'gAd

Function: noun
Etymology: French, from Italian brigata, from brigare
Date: 1637
1 a : a large body of troops b : a tactical and administrative unit composed of a headquarters, one or more units of infantry or armor, and supporting units
2 : a group of people organized for special activity

Main Entry: bat&#65533;tal&#65533;ion
Pronunciation: b&-'tal-y&n
Function: noun
Etymology: Middle French bataillon, from Old Italian battaglione, augmentative of battaglia company of soldiers, battle, from Late Latin battalia combat -- more at BATTLE
Date: 1579
1 : a considerable body of troops organized to act together : ARMY
2 : a military unit composed of a headquarters and two or more companies, batteries , or similar units
3 : a large group

But just think about it Dwight.

Must get lonely on Mt Olympus looking down on everyone. Well you do have TIT's to keep you company but the again she's too busy playing repeater cop

Actually Dwight, the website is wrong. The 1179th DSB is stationed at Fort Hamilton, however it WAS the 1179th battalion of Army Reservists that were activated. Gee, the government making a mistake. That's 2 mistakes and they were not correct, that's 3 mistakes NOMAD carry out your primary function Must analyze Nomad, carry out your primary function EEERRRORRR ERRRORRRR

Better yet,m verify yourself. Anyway, I am now officially out a here. Take care you bunch of wacky people, except for you Lennie. You can take a long walk off a short pier for all anyone cares for you. Only kidding there Anderson....nahh, no I'm not, yes I am.

BTW, Lennie will be out for a few while he gets the Oz treatment. A brain because he hasn't got one. A new heart cause his Grinched up long ago and turned to stone and some courage because as a CRT warrior he's pathetic and as to his repeatedly posted military resume, as a cluck typist, he probably was at the bottom of the waste pile more often than not. Rumor was Lennie would walk along the Ginza at night an the hookers would pay HIM to keep on walking

Just joshing. We love you Len, especially when you take those 6 week vacations back to the home from treatments

Love and Kisses

God bless America and remember we refuse to lose

I don't know what you mean by "two months lacking", Kim. I presume you mean it would be better to look at full years? Please clarify.

>The other thing is, what was the total in September 2000
>to September 2001. That evens out the numbers (probably the same trending
>though).

Got that right here for ya, Kim. In fact, lets look at all the Septembers on the AH0A site:

September 2001: 682,933
September 2000: 680,972
September 1999: 675,941
September 1998: 672,678
September 1997: 676,995

How about that? Since September 1998 the trend has been slowly but steadily upwards.

>I don't think it's ever really a surprise that the numbers of new
>hams goes up through the Fall and Winter months, nor that there's a drop in

>Winter see less participation in "hamming" than in the Spring and Summer.

Yup. The distribution of VE sessions and their attendance is all over the map. Here in EPa, winter is prime time to get on the air and do homebrew projects, spring and fall are prime time for antenna work and hamfests, and summer is the quietest time. How that correlates with new hams I don't know. But it sure sounds reasonable that there would be seasonal variation.
>
>Another thing I'll throw out (just as a hrrumpphh) is that I think, many

I say it's way too soon to tell!

Consider this: The fact that restructuring had little observable effect on the numbers shows that it's not the tests that are causing the trends - it's some other factors.

From: billsohl@mindspring.com
Message-ID: <3bd1dee1.814010@news.mindspring.com>
Source record: 22365

Excerpted from:
Amateur Radio Newsline report number 1262 with a release date of
Friday, October 19th, 2001 .

The International Amateur Radio Union speaks out on Morse and the ham
radio community responds.

**

INTERNATIONAL: IARU MEETS - MORSE ON ITS WAY OUT

The International Amateur Radio Union meets to discuss the future of
our
worldwide hobby service including the Morse code. Jeramy Boot, G4NJH,
reports
from Nottingham in the U-K:

--

The Administrative Council of the International Amateur Radio Union
met between
the 6th and 8th of October in Guatemala City. The principal business
was to
continue preparations for WRC-2003, which has several items of
importance to
the amateur services on its agenda.

Items discussed he harmonization of amateur and broadcasting
allocations near 7
MHz; adequacy of HF broadcasting allocations below 10 MHz; possible
revision of
Article S25 of the international Radio Regulations; changes to terms
and
definitions in Article S1 as a result of amendments to Article S25;
review of
provisions concerning the formation of amateur callsigns in Article
S19;
additional allocations for 'Little LEO' satellites; study of a
possible
allocation to the earth exploration-satellite service for synthetic
aperture
radar near 435 MHz; and possible identification of globally harmonized
frequency bands for use by agencies and organizations dealing with
public
protection and disaster relief. The IARU objectives with regard to
these agenda

items were affirmed.

The IARU Council adopted a resolution urging member societies to seek, as an
interim measure, Morse code testing speeds not exceeding five words per minute.
The IARU Council, setting aside previous decisions, resolved that IARU policy
is to support the removal of Morse code testing as an ITU requirement for an
amateur license to operate on frequencies below 30 MHz.

Jeramy Boot, G4NJH.

--

The next scheduled meeting of the IARU Council will be in September of 2002,
immediately prior to the Region 1 Conference in San Marino. (RSGB)

**

CW: HAMS REACT TO IARU DECISION ON MORSE

The IARU policy decision to support the removal of Morse code testing as an
international requirement for an amateur license to operate on frequencies
below 30 MHz is again sparking a hot debate. This, between those who favor
retaining mandatory Morse testing and others who want to see an end to CW as a
requirement to operate the high frequency bands. There is really nothing new
in the arguments on either side. Amateur Radio Newsline’s David Black,
KB4KCH, has more:

--

Morse code. Most hams love it or hate it.

CW, as it's also known, was developed for land based telegraphy in the early
1800's by Samuel F.B. Morse. Morse code and ham radio have gone hand in hand
ever since. But now, CW as a requirement for a ham license may be going away.

The International Amateur Radio Union Administrative Council has taken the
first steps. Less than two weeks ago, the group voted to set aside any previous
decisions and support removing Morse code testing as an ITU

requirement for
hams to operate on frequencies below 30 MHz. In effect, that move seems to
suggest there's little chance that the IARU will support keeping Morse testing
as a requirement for getting a ham radio license.

Long time CW operator Jerry Womble, WA4QIN, of Steele, Alabama, says losing
code as a license requirement would not be good for the amateur radio service.

--

Jerry Womble, WA4QIN: If you remove code from the process of getting' a ham
license I think you dilute the talents in the community, and I think it means a
little less to the person who actually gets the license that he did not go through a process that most of us have gone through to obtain our license
--

But that view is not universal.

--
Jim Baker, N4RVH: It wouldn't bother me if they did remove it.
--
Birmingham resident Jim Baker, N4RVH, says ham radio would continue just fine without Morse code as a license requirement.

--
Jim Baker, N4RVH: Radio is gonna to continue and its gonna progress beyond
that. With what the technology is getting into now it is going to far surpass what the code started out to do and that's to communicate.
--

These people are the middle grounders. They welcome an open exchange of viewpoints but they also know that they must accept the judgment of the service's political leaders and the world body of telecommunications regulators.

One side or the other will lose, but both sides will eventually have to live with whatever the final ITU decision on Morse code testing turns out to be.

From Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur
Radio Newsline.
--
The bottom line. Regardless what’s decided at the next World Radiocommunications conference, not everyone in ham radio is going to

be happy.

Why do you need 6 to 7 kilowatts on CB?

Don't you care about interference to your fellow CBers who share the band with you?

-Aaron-

Yep. That's what I meant: better to look at full years (even though--as
evidenced below--trending ends up about the same). It's easier to cause
confusion for the naysayers without it, I my opinion.

> >
> >The other thing is, what was the total in September 2000

Yep, looks that way. And, whether it is existing hams about to expire or new hams entering the hobby doesn't matter--at least I don't think so. I "number" is a number, right?

I think the correlation is that in the Fall and Winter months, hams are more likely to "be on the air" or be seen using ham radio, are more likely to bring ham radio into conversation with friends and co-workers, and are certainly out in the public more--what with storm spotting and public service events. There's lots of opportunity for non-hams to "see" ham radio at those times of year.

They don't understand power ratios. They think the more power, the
better. Give me a good antenna and I can compete with them.

You're fighting a losing battle, DP. When I had a CB years ago, it was one of the best sounding stations in the area. I could hear, and easily talk to, stations most could not. I received endless praise about the sound quality (thanks to a good, clean, microphone). And the station was totally legal (which seemed to surprise everybody).

Regardless of my endless lectures about the quality of the antenna and it's installation (height, location, grounding, etc), almost everyone in the area went with linears instead (and D-104 mics with echo, with radio modulation cranked to the max). Of course, these people could easily be heard, but half could not be understood and the other half could not operate most of the time because of complaints from neighbors. And still few of them could hear (receive) the distant stations in nearby counties I routinely talked to.

In other words, you could draw these people a blueprint of the perfect CB station, and they would still not get it. The lure of the bad boy image surrounding illegal linears is simply too much for many CB'ers to resist. The same with the need to fit in with the crowd (be like everyone else). For most people, both of these will outweigh "the right way" every single time.

Doubtful

We run better or equal antennas as you do.

So, yes, power IS the deciding factor, when running a stacked set of
mono-band 7 element antennas.

Power IS the deciding factor.

No, operator skill and experience, a well designed antenna setup,
quality radio equipment, and the ability to use that well, are the
deciding factors. Sadly, most CB'ers have none of those, so they
resort to power to help conceal their own limitations.

>What kind of truck you got?

Typically the outlaw CBers who "compete" to see who can output the
most outrageous number of watts create a powerplant by loading up the
engine compartment of a 1980's vintage Chevy Suburban with
alternators. The "32 pill" refers to 32 RF power transistors lashed
together Jethro Bodine-style in order to produce upwards of several
thousand watts of overmodulated, unfiltered RF which results in a
broad, spectrally dirty signal that freely propagates harmonics across
many frequency bands. The truck itself is likely festooned with
antennas sporting 1/4" copper coils, more for show than resonant, and
often features some inane slogan (e.g. "World Wide SkullCrusher")
decaled across its side windows.

Does that come in a mag-mount model?

> Power IS the deciding factor.

I don't think so, toll. You, like many of the other misguided souls in
this newsgroup, have misconstrued the meaning of the word "communication".
It's not about 'power'; it's about control, cooperation, and courtesy.
With nothing more than a stock CB, I can communicate with anyone anywhere
on the planet. I can also win a keydown against the biggest amp you can
find. It's easy. All you have to do is know how to communicate.

BTW, in reference to your recent comments regarding grammer, I can send
you the same book I offered to give to twist -- it will define for you
the 'preposition', and it will explain how it's something you shouldn't
end a sentence with. (pun intended)

>>inopportune times. In a few years things changed to the point where a
>>calculator cost less than a good slide rule. End of story.
>
>NO. NO. NO. Not the end of the story, just the beginning.

YES. YES. YES. YES. You missed the point - again.

When pocket calculators were $400, they were too expensive for almost all
students. Even at $100, they were too expensive for most. (These are 1970s
dollars we're talking about). But when they became price-competitve with a good
slide rule, it was all over - end of story - for slide rules.

>What was overlooked by many in 1972 was that all users
>had 10 digits of accuracy for ALL functions, transcendental
>and logarithms included. Not even a 1-foot cylindrical slide
>rule could approach that versatility or accuracy.

If the measurements are only good to 3 decimal places, 10 digits of calculation
doesn't make them more accurate.
>
>>>>And to a certain extent, that's the function of the Smith
>>>>chart these days. But it's more than just a relic of bygone

>>
>>Yup. Just like Morse code and ham radio.
>
> <insert at least a half hour of racous laughter at that non-analogue>

It's a perfect analogy.
>
>Try to explain why the Smith Chart is STILL IN USE IN THE
>RF INDUSTRY.

Because some folks like it. Is there ANY sort of design calculation that can
ONLY be done on the Smith Chart?

>Try to explain why the Chart format is
>still present in TODAY's network analyzer front panel
>displays.

Because some of the folks who buy them like that display. And with the
processor-based nature of those analyzers, it's not that expensive or difficult
to include such a display.

The same is true of Morse code and ham radio. Most HF/MF amateur transceivers
have Morse code capability because many hams USE the mode, and the folks buying
the rigs want that capability.

It's a perfect analogy.

>>>Vacuum tubes, slide rules, and steam engines...along
>>>with morse code skill...are becoming artifacts which are
>>>quaint, amusing relics of a bygone era.
>>

>>engines (turbines) driving alternators.

>
>"Steam engine" in the modern verhacular refers to
>RECIPROCATING engines...you know, like the old
>locomotives called "choo-choos" by kids.

"Verhacular"?

If you meant reciprocating steam engines or steam locomotives, then you should have used those words. A turbine is a form of steam engine.

Did you know the Titanic and sister ships had 2 reciprocating steam engines and one turbine? Did you know that there were locomotives that used steam turbines?

>Find me a
>steam locomotive on the railways today that carries
>freight and/or passengers.

They are called "railroads" in North America. There are still some steam locomotives in use today.

>Only the rare tourist
>attraction or an outdoor museum has them.

China and South Africa still use steam locomotives in main-line service.

> There's
>a railway museum just 4 miles from here in Griffith
>Park, quaint and fun for kiddies, and an arboretum
>that has a neat little kiddie ride with a miniature
>reciprocating steam engine, wow!

There are several scenic railroads around the country that use steam locomotives. The Strasburg Railroad near Lancaster is the closest one to me. They have some nice ones. There is nothing miniature about them.

>Two major railways
>go through the eastern end of SFV here and neither
>one has felt a steam choo-choo for years.

The Union Pacific Railroad and the Norfolk Southern Railroad, to name two, still have a few operational steam locomotives that are brought out for special occasions.
>
Steam locomotives were replaced by diesel-electrics in the USA during the 1950s. The transition would have occurred much earlier (1930s) but the Great Depression and WW2 got in the way. Diesel-electrics cost less to operate per ton-mile than steamers, so the "professsional" railroads (those who have to pay their employees and show a profit) replaced their steamers with diesel-electrics. Those railroads don't run trains just so that people can have fun running them and riding them.

But among "amateur" railroads (those which exist for the fun of those running them and riding them) steam locomotives are in wide use.

Your diatribe is just another example of how you apply what "professionals" do as the sole criteria to what amateurs should do. You completely miss the point of an amateur activity.
>
Both steam and diesel electric locomotives were obsolete from a purely theoretical level by 1915, when practical high voltage AC railroad electrification (11 kV, 25 Hz) was in service on the New Haven Railroad. Only the high initial cost of electrification and repressive property taxes prevented more widespread use of electric motive power.

You do not want to get into a debate about railroads with me, Len, you really don't. Believe it.

>>Morse code still appears as a standard feature in modern HF/MF amateur radio
>>transceivers and is still being used by today's hams.
>
>Used by SOME.

That's all it takes for the manufacturers to decide that the mode is worth including in their products.

>That is still NOT a reason for the license
>test requiring tested manual-aural skill...not by the FCC and
>now not considred meaningful by the IARU!

So? Who was talking about a test? I keep telling you that the test issue is a dead duck, done, over, end of story. The IARU thing was no surprise at all.

Point is, ham rigs have Morse code capability for reasons similar to network analyzers having Smith Chart presentations.
>
>It's a losing argument full of holes that you present.

Nope. You just don't like admitting you're mistaken, Len.

>You won't
>give up because you don't know how to grow with the times
>and your ego prevents you from captitulating in any way.

That's not me you've described, Len. Again, you're projecting.

>might. There are others who will enter that future who will do
>things differently than you, embrace new technologies and
>accept them. Those of the future will not glorify the past and
>past technology as religious myths as is common among
>certain old-timers.

Nope. Not at all.

Change just for the sake of change is pointless. Progress involves change, but all change is not progress. You hold up "change" as a sacred mantra that no one must question. Well, I'm questioning it, and showing that the emperor has no new clothes.

You say you're all for "change" but you don't say why or where that change should lead. Anyone who follows such a pied piper deserves what they get.

Was the recent change in the Manhattan skyline a good thing? I don't think so.

Rather than present a coherent future direction for a radio service that you don't even use, you sit on the sidelines and argue endlessly with those who DO use that service. And when opposed, and your errors revealed and rebutted, you call your opponents names and insult them with snide comments. If you are the future, Len, it's no wonder some folks want the past.

But not me. I'm living in the present, working on the future.

Ever hear of affirmative action? Every time I don't get a job because
it was given to a less-qualified minority member solely for the
purpose of satisfying a minority hiring quota, I'm paying not for the
actions of my ancestors - who didn't arrive in this country until the
1930's - but for the ancestors of others. My ancestors had nothing to
do with it. But as a taxpayer, I'll still be asked to foot part of the
bill if they ever convince the government to pay reparations to the
decendants of former slaves.

As for the sneak attack on Pearl, I already posted the body count for
that one action. What about all the other people, in both the Pacific
and European theatres, who lost their lives or those of loved ones as
a result of the actions of the Axis powers? The mistake wasn't in
rounding 'em u, the mistake was that we didn't repatriate 'em to
Hiroshima and Nagasaki before we dropped the big ones, so they could
fry along with their fellow countrymen.

To which Jim replies.....
>I have NO idea what this is supposed to mean.

What it means, Jim, is that one very lonely, dispicable old man is sitting in front of his computer screen right now wishing he was in front of the controls of his own radio station doing the very things WE can enjoy any time.

But he doesn't....He long ago set himself up for the fall by assuming that his 15 years of night school education made him better than "mere mortals", and should be accepted carte blanche as proof of his "worthiness" for licensure in the Amateur Radio Service. Sitting for the exam would validate his mortality, and he can't stand that.

He's a broom handler, Jim. Always has been, always will. He's been second fiddle because he always THOUGHT he knew better and HE was better than whoever DID "know better".

He was wrong. Unfortunately, the Internet in general and the relative anonymity of newsgroups in particular allows him to express his arrogant vileness with a degree of impunity, and now we are destined to suffer this insufferable creep.

>But not me. I'm living in the present, working on the future.

Ditto.

The argument for an age limit for a ham license would have more than zero credibility if the arguer could cite even ONE case where a ham's youth was a cause of a rules violation.

The young hams I have met have ALL been very focused on following the rules and being the best possible operators they could be.

Exactly. Look at the FCC enforcement letters, then look up the age of the
alleged violators. It sure ain't the teenagers causing the problems.

And the modes of choice for violations are almost all voice modes. Not a
violation by use of Morse code in the nonvoice subbands in the bunch...

OOOPS! Sorry!

Correct that to read:

"A very WISE friend of mine..."

(That never would have happened using Morse)

>"number" is a number, right?

If number of licenses is the concern, yeah. But the important factor isn't number of licenses, it's number of ACTIVE licensees, which is a very different issue.

And note the growth trend:

Sept 1998 to Sept 1999: +3263
Sept 1999 to Sept 2000: +5031
Sept 2000 to Sept 2001: +1961

More growth BEFORE restructuring than after! How about that?

>at those times of year.

Maybe in TX but not in EPa. But the point is still valid: ham radio is much more visible in some seasons than others.

Here's another point: with a few exceptions, ham radio has historically grown more in bad economic times than in good ones. During the '60s there was no growth at all - the number of US hams was stuck at a quarter million or so from 1960 to about 1970. Then, through the stagflated '70s and early '80s, it grew and grew until there were more than 550,000 in 1984. Maybe the current economic slowdown will translate into more new hams...

Personally, I am more concerned about an Anonymous Coward (you) that can make such infammatory allegations, yet can't even spell "license" correctly, let alone foramt a proper sentence.

Do YOU have a callsign, Anonymous Coward? Do you have a name? Who are you to make such allegations without sharing YOUR name, YOUR callsign or YOUR qualifications to decide if this person warants ANY scrutiny.

Until then, stick it in your ear, you creep.

None of this should come as a surprise. The member societies have been
moving towards reduction and elimination of code testing for several
years now, and so have many of their governments. At the last Region 3
IARU meeting, the vote was one short of unanimous to recommend
elimination of mandatory Morse testing. The one vote to keep it was
the ARRL rep, who had to vote that way because he was directed to do
so by ARRL BOD policy of the time. Shortly after that meeting, the
ARRL BOD changed that policy.

Nope. It's been going on since the 1938 Cairo conference. Back then, many governments wanted more room for SWBC to push their version of news and hopefully influence world events. The sharing of 7100 - 7300 was a compromise based on politics, not propagation. The problem is simple: shortwave broadcasters don't want to give up any spectrum, or even move their existing transmitters.

So, if your running equal antennas as I am, and I run twice the output power that you do, you still have a chance of being heard when I am keyed up?

Typical argumentative "I am holier than you, and my antenna system will whip your linear's butt".

Notice how he only quoted PART of my text, since if the rest was taken into account, it would make his comment fecal matter.

No, that would be on the base station.

On the mobile, it isn't uncommon to find people running 3, 4, 5 even 6
element mobile antennas at a keydown.

>
> > Power IS the deciding factor.
>
> I don't think so, toll.

So, with equal antennas, you believe the guy with a lower power output from
his transmitter or amplifier will have a greater
chance of being heard than someone with twice the output power?

Please explain that.

You, like many of the other misguided souls in
> this newsgroup, have misconstrued the meaning of the word "communication".

We are not talking about comms, we are talking about a shootout competition.

Listen during CQWW and you will find the same things on the amateur bands.

Besides, you can throw anything into an argument, and if it is off topic,
you will
find that you can argue any point.

> It's not about 'power'; it's about control, cooperation, and courtesy.
> With nothing more than a stock CB, I can communicate with anyone anywhere
> on the planet.

And with my 2Kw amplifier, I can do so more often, with more reliability.

If that WASN'T the case, you wouldn't find the proliferation of amplifier manufacturers
in the commercial and amateur arena, would you? I mean, after all, everyone wants to spend
money on unecessary items? Don't you?

I can also win a keydown against the biggest amp you can
> find. It's easy. All you have to do is know how to communicate.

lol.

Your going to win against a mobile to mobile competition using a barefoot radio against someone
with a 80Kw output? All else being equal?

extranneous BS snipped in the interest of brevity.

75 meters. Enough said.

2 meters, just in case you didn't get it the first time.

Hollingsworth went after the ARS before CB radio service. You wonder why?

ARS is just as dirty, just as political, and has just as many bad apples as
the CB radio
does in proportion. When the US ARS service has as many people in it as the
CB service does,
then you can compare the two. Otherwise, your comparing apples to oranges.

In addition to caring about our
> own enjoyment of radio, we hams also care about other people's
> enjoyment of radio. They don't.

lol.

Hence the problem with ARS operators coming to the 11 meter band.

Hence the problem with ARS operators getting busted for signal jamming

Hence the problem with ARS operators building illegal output amps.

Hence the problem with ARS operators and them building illegal 11 meter
amps.

Blah Blah Blah.

Hollingsworth is beginning with the ham bands because hams raised enough hell to get him appointed. His title is 'Special Counsel for Amateur Radio' BTW. And if you want to see some the results just go to Rec.Radio.Amateur.Misc where a few idiots that have been Rileyed now find it safer to conduct their stupidities.

Apples and Oranges, all right. The Amateur Service cared enough to begin the resurection of the Enforcement Bureau.

I see it as "the federal government tired of the constant problems that where brought to their attention via letter writing and phone calls, and as such, they got a "cop" to police the problem area (spectrum).

Reading anything else into it is utter gibberish.

His title is 'Special Counsel for Amateur Radio'
> BTW. And if you want to see some the results just go to
> Rec.Radio.Amateur.Misc where a few idiots that have been Rileyed now find
it
> safer to conduct their stupidities.

I am not saying he is doing a bad thing, nor am I against what he does.

Nor do I disagree that the idiots running class C boxes, dirty overmodulated radios (see my problem with Eitner and his advocation of clipping limiters, etc) or trashy equipment need to be run off the air, given stiff fines, etc.

However, the person running a clean station, that has fun on his radio doesn't need to be bothered, either. I can run 3Kw - 3500 watts around my neighborhood and have no problems with any of my neighbors. However, I can also hook up a driver amp, and a CB radio and take out the entire subdivision.

I have ALWAYS been an advocate of running power, but running power CLEANLY.

>
> Apples and Oranges, all right. The Amateur Service cared enough to begin
> the resurection of the Enforcement Bureau.

lol. I doubt that very much. Please cite reference to the claim (not calling you a liar, but I don't think that it was ARS that brought Hollingsworth on, I see it more as the Senators and Reps. getting tired of the constant complaints). However, you may be right, what with the @$$holes that proliferate 75 and 2 meters. I may be wrong, but I doubt it.

Because hams literally begged him to. The majority of hams are decent
people who do not want anarchy and lawbreaking on their bands.

Do you mean as in you would have a website about forest preserves
because "park" is part of your name?

Picking some titillating combination of letters out of context from a
complete symbolic set such as a callsign or name to make some
pejorative assertion thereupon is imbecilic.

>
>I predicted that nothing I could do would convince you.

No, you wish to attack the messenger for not admiring
your whatevers in what you SAY you can do. So far, in
regards to "mastery of the Smith Chart" all that anyone
has seen is some homework on "examples" that were
contributed after at least a week.

>Change just for the sake of change is pointless. Progress involves change,
>but
>all change is not progress. You hold up "change" as a sacred mantra that no
>one must question. Well, I'm questioning it, and showing that the emperor has
>no new clothes.

Saying that old things are still with us, as if they were a part
of everyday technology in sizeable numbers, is false.

The rejection of anyone advocating change is seen by Miccolis
to be some sort of "sacred mantra that no one must question?"
Ridiculous. Absurd.

>You say you're all for "change" but you don't say why or where that change
>should lead. Anyone who follows such a pied piper deserves what they get.

Anyone who continues to favor a code test as a pass-fail
criterion for amateur radio licensing seems to think they
are "deserving" of a federal welfare program to yield them
titles, status, and privilege. Anyone who follows such a
pie-eyed piper deserves to remain rooted in antiquity.

>Was the recent change in the Manhattan skyline a good thing? I don't think
>so.

Excuse me? Is advocacy of eliminating the amateur code
test "terrorism?!?!?"

Miccolis must think so considering such an off-the-wall
question.

>Rather than present a coherent future direction for a radio service that you
>don't even use, you sit on the sidelines and argue endlessly with those who
>DO use that service.

The FCC does not require any part of its staff to USE
amateur radio...nor to be licensed as an amateur.

The FCC allows ANY citizen to comment on its
regulations about any radio service.

Miccolis favors "turf ownership," part of the human Territorial
Imperative which is, in this case, false and misleading. I will
not stress that it is also against the First Amendment since
some amateurs feel that it does not apply to anyone
concerning amateur radio regulations.

>And when opposed, and your errors revealed and rebutted,
>you call your opponents names and insult them with snide

>comments.

So...one cannot call N2EY as N2EY even though that is how
he "signs" his messages? He cannot be called "Miccolis"
because using a surname is a "bad name?"

I do not accept some statements of mine being called
"erroneous" or "in error" for being based on referencible
databases. I do not accept some statements of mine
being called an "error" because they show certain things
that are against the error-caller viewpoints.

> If you are the
>future, Len, it's no wonder some folks want the past.

Ah, so snide comments, indeed borderline insults, are
"acceptible" if done by Miccolis but are "unacceptible"
if done by others against his viewpoints? Yes, a double
standard at work.

>But not me. I'm living in the present, working on the future.

...and with very old ideas on what constitutes entrance intp
amateur radio...except to do as Miccolis did....

We know that.

>that you do, you still have a chance of being heard when I am keyed up?

Believe it or not, yes, he would still have a chance of being heard
when you are "keyed up" especially in single sideband mode when you
would be emitting basically no signal at all unless you were speaking.
The second you stop talking, even if your transmitter is still on, he
can be heard regardless.

Furthermore, the propagation path from your location to the receiving
station may not be as good as the path from his location to the
receiving station. If I'm on the east coast and in the greyline along
with a station on the east coast of, say, Australia, and you're in the
midwest...the greyline enhancement on my signal at the receiving
station might be the difference that allows me to (as we used to say
on the CB band back in the 70's) "walk the dog" so to speak.

>Typical argumentative "I am holier than you, and my antenna system will whip
>your linear's butt".

It isn't ONLY power or ONLY the antena, Toll. You key up with 10,000
watts on AM, and if I key up with a "measly" 100 watts P.E.P. on USB,
my signal will ride your carrier right to the receiving station. I
will be heard. Get a shortwave receiver and park it on 10 MHz at night
and eventually you'll hear the proof of this concept in the
Spanish-speaking sideband stations riding WWV's 10kW AM carrier across
most of North America.

>Notice how he only quoted PART of my text, since if the rest was taken into
>account, it would make his comment fecal matter.

I think neither of you took everything into account. I haven't either,
since I'm not here to write a book on basic communications theory.
What we're saying is that there are less expensive and more efficient
ways to get your signal to a desired location - without interfering
with everyone else on the band for 500 khz on either side of you.

>Sorry, that was not an "admission," but an answer to "it's
>the simple truth."

Oooooh-kay....Lennie says people have to "admit" to things, not "answer" them.

If that's not the delusions of a manipulator, I don't know what is.

>It is not truth if Miccolis says it over and over again. (he will,
>it is his style

And that is another Leonard H. Anderson blatant lie.

Does your wife know what a liar you are? Or perhaps she LIKES being lied to...Helps to make her life in Scumbagville tolerable.

>Translation: You know I'm right, so you attack the messenger
>instead of the message.

Again, you are lying. You canopt answer this maturely. Not that we ever expected you to. You cannot.

>Judging from all those claims of "superiority" I doubt there
>are many mortals who can meet such a "challenge."

Considering the pedestal you have put yourself on, that shouldn't be an issue.

>No, you wish to attack the messenger for not admiring
>your whatevers in what you SAY you can do.

Jim's "problems" employing the Smith Chart have been rather thourough. Guess you're having a problem with that, huh...?!?

>So far, in
>regards to "mastery of the Smith Chart" all that anyone
>has seen is some homework on "examples" that were
>contributed after at least a week.

Which so far is two years ahead of anything you have had to offer.

We are still waiting on the microwave practices thread, Lennie. What's a matter...no time in your busy schedule???

You have been so adamant that "professional engineers" have so much to offer us, yet so far all you offer is lies and antagonism.

>Saying that old things are still with us, as if they were a part
>of everyday technology in sizeable numbers, is false.

It is true. Analog satellites are still in orbit. Analog technology is still a sought after engineering skill...Ergo, it IS true.

>The rejection of anyone advocating change is seen by Miccolis
>to be some sort of "sacred mantra that no one must question?"

It is a mantra that you reject. You refuse to accept that change in the Amateur Radio Service is a daily occurence. THAT is a false assumption on Your Gonadlessness' part.

>Ridiculous. Absurd.

Yes...You are...

>Anyone who continues to favor a code test as a pass-fail
>criterion for amateur radio licensing seems to think they
>are "deserving" of a federal welfare program to yield them

And here we have it...Anyone who does not support Lennie the Liar is antiquated.

Of course we (yes...WE) know who the antique is...He's dying a slow, lonely death on Lanark Street.

>>Was the recent change in the Manhattan skyline a good thing? I don't think
>>so.
>
>Excuse me? Is advocacy of eliminating the amateur code
>test "terrorism?!?!?"

Why do you ask? It was NOT a part of the quote that you paraphrased Jim from.....

.>Miccolis must think so considering such an off-the-wall
>question.

You must have given a lot of consideration on how to pose a trollfull question in order to further obfuscate your own foolishness. That's the one thing you do well and without fear of contradiction.

>The FCC does not require any part of its staff to USE
>amateur radio...nor to be licensed as an amateur.

Which has nothing to do with the comments at hand...More obfuscation.

>The FCC allows ANY citizen to comment on its
>regulations about any radio service.

Even lying scumbags such as yourself.

>Miccolis favors "turf ownership," part of the human Territorial
>Imperative which is, in this case, false and misleading.

He said nothing of the sort.

>I will
>not stress that it is also against the First Amendment since
>some amateurs feel that it does not apply to anyone
>concerning amateur radio regulations.

The First Amendment pertains to freedom of speech guaranteed to citizens over the government...Not by citizen over citizen. Your only "guarantees" are from the government by the government.

>So...one cannot call N2EY as N2EY even though that is how
>he "signs" his messages? He cannot be called "Miccolis"
>because using a surname is a "bad name?"

What's your problem with calling him "Jim" like he calls you "Len"..???

>I do not accept some statements of mine being called
>"erroneous" or "in error" for being based on referencible
>databases.

Sure...why should you accept ANY responsiblity for ANY of your actions? You never have...you never will.

>I do not accept some statements of mine
>being called an "error" because they show certain things
>that are against the error-caller viewpoints.

They are called that because they ARE in error. You can't stand it that we mere mortals (including some of whom are far more educated and talented than you ever THOUGHT of being in 15 years of night school...) can routinely see through your lies and rhetoric.

>> If you are the
>>future, Len, it's no wonder some folks want the past.
>
>Ah, so snide comments, indeed borderline insults, are
>"acceptible" if done by Miccolis but are "unacceptible"
>if done by others against his viewpoints? Yes, a double
>standard at work.

That's not what he said. But I am sure you wish it was.

>>But not me. I'm living in the present, working on the future.
>
>...and with very old ideas on what constitutes entrance intp
>amateur radio...except to do as Miccolis did.

That's not what he said either, but again, I am sure you wish he did...It would justify the rants...

>We know that.

>>YOU<< think you know that. WE know better than you.

As always.

Easy. Each doubling of output power gives a 3 dB increase. If I have
a million watts and you have two million watts, your signal isn't
going to be twice as strong.

>So, if your running equal antennas as I am, and I run twice the output power
>that you do, you still have a chance of being heard when I am keyed up?

Good point. Equal antennas will mean virtually equal signal.
Doubling the output power gives a 3 dB increase. That's less than
half an S-unit. If he's running an S-9, and I have an equal antenna,
that means I'll be slightly over an S-8 1/2. That's not much of a
difference.

Well no reply, so either you were trying to stir up trouble or you realize I am here.

I enjoyed my day off, I walked down to the USS Intrepid museum, then walked to the port authority terminal and took the c train to spring street, then walked west to cross verick to the N.Y. Fire Department museum, they have got some great old equiptment in the apparatus room there, reminds me of the pictures of my grandfather on the equiptment at the station back home many many years ago.

hope everyone had a great and a safe weekend.

A couple reasons why clubs aren't as full as they probably should be.....

Politics-

Any time you assemble a group of people together, you are not going to get an unanimous (sp.?) agreement on ANY topic.

Time-

The structure of a person life, now requires more people to be working more hours to achieve the same amount of income. Working families also have even less time.

Topic or Purpose of Club-

What is the purpose of the club? Is it just a "repeater" club? Is it a club that participates in contests, public service agencies etc? Some people may not be served well by the club in thier area for what they are looking for in the area. I have witnessed some clubs that worked under the "pod" system where they had the main pod being the club in general, with smaller pod cells surrounding the main pod and connected to it. (if you want to mentally visualize that) This way the different pods could serve a particular niche and satisfy that interest.

Promotion-

Does the club promote it self and the hobby? I have developed a plan for agressively putting amateur radio in the forefront. With contact with all radio, tv and print media within a 30 mile radius of our city, we actually have achieved some growth in our numbers. Hopefully more will come in my second year of doing this. I am writing a report for club promotion and will be distributing that in some form or another for interested parties.

Education-

Does your club educate? Offer classes? Offer training or practice sessions? This is a great way to increase membership.

Shyness or personality differences-

Some people are just naturally shy. The may like to speak to people on the air but not in groups. They may like to converse in the coldest, most impersonal form of communication, morse code, but again, may not like being in groups. Some hams are what may be (not properly though) viewed as "goody-two-shoes/anal retentive type of nerds," which is a bad impression of our community. Some people may be turned off by that. I have personally had to contend with that stereotype when trying to promote the hobby. Hams come from a variety of lifestyles, personalities etc.....

I guess the main thing also to remember, clubs seem to operate in cycles. Some years there is record attendance and enrollment. Others it is just the opposite. Also, some clubs always seem to have 20 percent either doing most of the work or participating, and the other 80 percent do not. This may be a turnoff to some club members especially if they are in the 20%.

Well, if you're going to make such blanket stereotypes, then you obviously haven't seen your fair share. Republicans, nationwide, are as diverse in their political opinions as the Democrats, perhaps even more so. It would be almost impossible to pin a single opinion on ALL Republicans. Indeed that is probably one of the weaknesses of the party at the moment - they have few common goals and opinions (other than the desire to beat the Democrats and their disorganized support for the Bill of Rights). The Democrats, in addition to their common goal to defeat Republicans, also have other relatively common political opinions and goals (environment, social engineering, and so forth).

An experienced operator would not "key up" when you "key up."
Instead of trying to make it a competition about who can shout louder,
he will likely bide his time and wait for the opportunity for his
signal to be heard. He will also have enough experience to know when
and where to look on the radio dial to avoid that type of garbage.
But, even if he did "key down" with half the power, your signal would
not be that much stronger - twice the power does not equal twice as loud.

What is a "keydown," Toll? I envision a dozen or so drunken CB'ers sitting around a car wash parking lot transmitting at the same time to see which can be heard over the other.

> We are not talking about comms,
> we are talking about a shootout
> competition.

What is a "shootout competition?" Is this the home version of the car wash "keydown?"

Three reasons. Most ham operators invite that level of enforcement,
ham radio contributes more so is more valuable to the country, and
Amateur radio is easier to police because there are less problems to address.

> ARS is just as dirty, just as
> political, and has just as many
> bad apples as the CB radio does
> in proportion. When the US ARS
> service has as many people in it
> as the CB service does, then you
> can compare the two. (snip)

You have got to be kidding. There is routine garbage on the CB
frequencies that is very rare, if not totally unheard of, in the ham
bands (decent women afraid to even open their mouths for fear of
sexual harassment, widespread illegal equipment and operation, threats
of violence, and the list goes on). Ham radio, even on it's worst day,
is not even close to as bad as CB on it's very best day.

> Hence the problem with ARS
> operators getting busted for
> signal jamming

Once or twice a year, while a daily routine on CB.

> Hence the problem with ARS
> operators building illegal output
> amps.

Extremely rare for both radio services. Hams rarely operate illegal
power amplifiers, while most CB'ers (99%) would not even know how to
build an amplifier. However, if you compare the USE of illegal power
amplifiers (including those purchased), this is again extremely rare
for hams, while commonplace for CB'ers.

> Hence the problem with ARS
> operators and them building
> illegal 11 meter amps.

Again, extremely rare for both radio services. Most CB'ers (99%)
would not even know how to build an amplifier, while very few hams
would build illegal equipment for CB'ers.

> Blah Blah Blah.

Got any more of them, Toll? Why don't you talk about the treatment
of women on the CB frequencies? And we're not talking about the truck
stop prostitutes that hang out on channel 19 (even though most of them
are now avoiding CB also).

Thanks for clearing that up -- I always thought that the whole purpose
of radio communications was communications. I didn't realize that radio
was invented and developed for 'shootouts'. With that in mind, the FCC
and the ARRL need to rethink the rules of the game. All those QRP rigs
are for people that don't have a life, I guess. And what's the point
of using a microphone? Just make a big switch, the bigger the better
(which seems to be the mentality of radio engineering these days, huh?)

BTW, my mommy has been dead for quite a while, so I guess that makes
you a necrophiliac.

Perhaps on their best days, but not on the average. There are just so many fast food places, located so close together, with costs so high, it is getting very hard to make decent money in that industry anymore. About the only way to make a good living (forget about making big money) is to own several in different locations (and even that is not certain).

I've talked to Antartica, Argentina, Japan on 28MHz (ham 10 meters)
using a lousy attic dipole and 100W rig (TS440SAT) so you don't
need kilowatts of power when propagation is good.

Get a "general" ham license, only 5 words a minute code test now
and some multiple choice written test.
Look at http://www.aa9pw.com/radio/exam.html for practice
tests.

You can then use a linear
legally on many ham bands, AM, FM, SSB, digital modes, and there
are many HF SW bands with differing long distance DX "skipland"
propagation characteristics. Many work just fine when "skip"
is dead on CB 11 meters, like when the sunspot cycle bottoms out.

Don't feel blown off by a previous bad experience with a ham
club, there's many more out there that you'll like.

It is my sad duty to report the silencing of truly great key. Got this from a reflector....

Jim Ricks, W9TO, passed away Friday, 20 Oct, at Lake Forest, WA. (Seattle)
He was 86 and had been battling prostate cancer for a couple of years. Jim was well known in CW circles as well as engineering, and was responsible for the monumental sea-change in keyer design, from analog to digital, in 1955, with the innovative astable-bistable multivibrator configuration, leading to perfect code without having to set multiple adjustments. Hallicrafters marketed his design as the "TO" keyer for many years, the tube design followed by the the solid state version.

Jim was also "founder" of the High-speed CW group CFO, (chicken fat operators: dit - dit - dit - - - di-dahhhhh) which he fondly called the "ultimate disorganization," not wanting to take any credit for it or have it attain any artificial importance.

Jim was a widower for nearly 10 years, following the passing of his wife, Pat.

>
>If the "problem is so simple" then why hasn't there been
>any resolution since WARC-79?

The problem is simple but the solution is not. The SWBC folks don't want to
give up any spectrum and they don't even want to move. Many SWBC stations are
operated by their respective governments, so there is a vested interest in
holding on to their allocations.

>22 years is a long time to wait, isn't it?

Radio conferences that deal with HF don't happen very often. And the sharing of
7100-7300 has been going on for 63 years.
>
>>> Meanwhile, the FCC IB IWG-6 hasn't yet reached any position

getting
> their licenses?

My guess is a lot of 'em are just too shy to get on the air. There seems to be this mental hurdle people have to get over when getting on the air for the first time.

After people take their exam and pass, take them into a radio room, or hand them an HT, and show them how to get on the air. Let them get on the air and talk (allowed using third party rules) so they get a feel for what it's like. (Might want to make sure there's a few folks who know about what time tests get done and will be available to chat on the local repeater).

Also try to keep an ear out for new callsigns out on your repeater. Make an effort to reply to that new sign, and get them talking. Invite them to club meetings, etc.

73s,

Robert / N4IXT

Ahh yes. But you see, nobody was talking about SSB mode until you
brought it up. We where talking about keydowns, and the amplifiers
we use in them, and the antenna systems. With keydowns, you use
AM, and AM only. I would prefer to use FM, since their is no
heterodyne, etc., and the capture effect of FM would REALLY prove
who won the event. However, FM doesn't have the "loud scratchy" AM
quality, and the people won't use it.

Gets rid of the cheaters, so they don't want it.

> The second you stop talking, even if your transmitter is still on, he

Nobody runs SSB in keydowns, so you are bringing up apples and oranges.

> Furthermore, the propagation path from your location to the receiving
> station may not be as good as the path from his location to the

You pull up on a line, seperated by about 25 feet. How much different can
the propogation be?

If I'm on the east coast and in the greyline along
> with a station on the east coast of, say, Australia, and you're in the
> midwest...the greyline enhancement on my signal at the receiving
> station might be the difference that allows me to (as we used to say
> on the CB band back in the 70's) "walk the dog" so to speak.

Blah blah blah. He is talking about something irrelevant. We where talking
about mobile to mobile competition, in a controlled environment.

>
> >Typical argumentative "I am holier than you, and my antenna system will
whip
> >your linear's butt".

> watts on AM, and if I key up with a "measly" 100 watts P.E.P. on USB,
> my signal will ride your carrier right to the receiving station.

Actually, not if I am modulating my carrier. And at 100 watts, you won't do
that. Experiemented with it, tried it, and it doesn't work.

The sideband noise is so large on those massive multi-amplifier setups that
you easily
see 4 or 500 watts of BS alongside the carrier when viewed on a spectrum
analyzer.

Besides, again, we aren't talking about SSB. We where talking about a
controlled
environment shootout.

I
> will be heard. Get a shortwave receiver and park it on 10 MHz at night
> and eventually you'll hear the proof of this concept in the
> Spanish-speaking sideband stations riding WWV's 10kW AM carrier across
> most of North America.

That has more to do with propogation of different regions of the earth, than
it does
with real world applications with CB shootouts, which is what this
conversation was
about until you attempted to change it.

I understand what you are talking about, and have used it to my advantage at
times.
However, your off topic. Which basically invalidates your argument.

>
> >Notice how he only quoted PART of my text, since if the rest was taken

> What we're saying is that there are less expensive and more efficient
> ways to get your signal to a desired location - without interfering
> with everyone else on the band for 500 khz on either side of you.

I totally agree. FM is best for shootout, since the capture effect will
ONLY
let the strongest station be heard. SSB is best for long range comms (that
the average person has access to.. Spread Spectrum is even better, but
how many of us have a nice Harris sitting in the shack)?

However, the conversation we where having, that you interjected into, was about CB amplifiers and competition with them. Not about what was the best way to talk.

Have a good one bud.

Power doesn't equal splatter. I can kick a speech processor on, and
effectively
get another 3dB, which would be an S unit, with louder modulation, which,
in effect, puts you down in the dirt.

Not typical CB mentality. Its laws of physics here. Please see my other
post
regarding how the shootout competition is held before you begin to tell me I
am
wrong.

No, but it does put the edge on the guy running the double power.

3db isn't important? Then why do they make more than one style of beam, ya know?

lol

CQWW proves you wrong. And also puts the amateur community in the
same ballpark as the CB radio crowd. Take a look at the amps reflector,
and the people bitching about people taking up too much bw, as well as
when they are questioned about it, they actually ADMIT to splattering
to keep the frequency to themselves.

Hams are no better than CBers when it comes to competition. It's called
human nature, and no license will take the human element out of it.

Actually, on the keydown line, all else is about equal.

It comes down to a fight about who has the largest PEP output, and the most efficient antennas.

Hams argue it is ALL about antennas. CBers argue its all about power.

I argue its all about who spent the most fucking money. :)

You have proven nothing, other than my point. The guy with the bigger amp
will have a stronger signal, and a better chance of being heard.

Thank you.

You would be about as wrong as you can get. It usually involves little
drugs
or alcohol, and the kids are all given something to do, and we have a good
time,
see friends that we talk to on a regular basis, etc. etc. ,etc. Sounds like
a field
day to me. Maybe that is something that you can understand.

So did I. My first radio competition was CQWW single / single.

Then I discovered the CB radio competition scene. Now I enjoy both.

I didn't realize that radio
> was invented and developed for 'shootouts'. With that in mind, the FCC
> and the ARRL need to rethink the rules of the game.

Yes, they do. All those stupid fucking contests that destroy the 80-10
meter
spectrum should be made illegal. Gee, I can get a **5***, your 5/9. QSL
via bureau.

Seems I hear a lot of the same on 11 meters. Guess their isn't ANYTHING
that seperates our
testosterone from yours, is their?

All those QRP rigs

Please post the FCC page or otherwise where you get your numbers.

If the ARS was so clean, then why did Riley Hollingsworth need to be hired.

Remember, he is attacking ARS FIRST AND FOREMOST.

No, I guess the racism, sexualism, etc. that took place on 75 meters
never happened, did it?

Denial is the worst form of vanity. I agree that CB needs to be cleaned up,
but I don't agree with a bunch of hams attacking CBers when they try
to run clean power, NOR do I agree with amateur operators coming
to rec.radio.cb telling us how fucked up this radio service is, when their
own is coming under scrutiny for the same.

You think the ratio of bad apples to good isn't about the same? How many
ACTIVE
licensed amateurs are on the air? How many CBers?

This would actually be fun to look into, as I KNOW the amount of hams is dwindling.

Take a look at the big 3 ham mags. All they can talk about is how it is a dying hobby.
Sad but true.

CB is growing more and more. Which yes, means you get more idiots.

I also lived in SoCal, and had to fire up the 8877 2 meter box sometimes just to make it
into the repeater. So yes, the ARS also has its problems.

>
>
> > Hence the problem with ARS

lo.,. Hollingsworth has made a career out of it. I suggest you get your facts straight, and get the hell out of lala land.

>
>
> > Hence the problem with ARS
> > operators building illegal output
> > amps.
>
>
> Extremely rare for both radio services.

Bullshit. Take a look at the people on the amps reflector. Most of them talk
of buildling, repairing, and selling "tetrode with handles" amplifiers.

I personally know of 3 in use on the amateur bands here in a 100 mile radius.

My 4CX5KA7 box does 80-10.

Hams rarely operate illegal
> power amplifiers, while most CB'ers (99%) would not even know how to
> build an amplifier.

Oh yes, and the ARS hasn't become a bunch of appliance operators, have they?

Hell, most amp manufacturers offer no-tune tube amps now, just because they got tired of people having tubes sent back, destroyed, because they didn't know the proper way to tune and load, and stripped the grid coating from mistuning.

However, if you compare the USE of illegal power
> amplifiers (including those purchased), this is again extremely rare
> for hams, while commonplace for CB'ers.

Total bullshit. Most people on the amateur radio service run way more power
than is
necessary for comms. 100 watts is what comes out of the rig, thats what
they run.

I know this for a FACT, having WITNESSED it at the peoples stations I
frequent.

No, not all of them are CBers.

Dwight, give it up. Your preaching to the choir. The ARS is just as hosed
as
the CB community. When you can boast the same amount of users, in the same
amount of spectrum come back and talk.

Otherwise, meet you on 20.

1 2290 driving 2 2879s, driving 8 2879s driving 5 8877s off a single 300A
leece neville driving a pair of 4CX15000s, with 5 double stator alternators
for power (on the large amp), and 5 3a 7.5kV transformers.

A0 output.

You honestly think that won't do 80 grand carrier power?

Nobody said anything about linear amplification here, either. The tubes are
biased WAY into cutoff (hence the massive overdrive, to overcome the grid
bias).

Had this argument on the ham amps reflector, and they finally admitted it
WAS and IS possible.

Unless we ham exceed the upper power limit (typically 1KW) we
can legally build linear output amps for use on most ham
bands. Even 10 meters if we build one for our own personal
use.

Why mess with illegal 11 meter CB stuff if you have a ham license,
Toll Free?

Have I done that? Nope.

> The rejection of anyone advocating change is seen by Miccolis
> to be some sort of "sacred mantra that no one must question?"
> Ridiculous. Absurd.

What is ridiculous and absurd is the idea that all proposed change is somehow automatically "good" and must be accepted by all. What is ridiculous and absurd is the idea that those who oppose change are somehow automatically "bad" because they see the proposed "new order" as inferior to the old.

> >You say you're all for "change" but you don't say why or where that change

Translation: "Old" = "bad", "new" = "good"

Ridiculous. Absurd.
>
> >Was the recent change in the Manhattan skyline a good thing? I don't think
> >so.
>
> Excuse me?

What are you apologizing for? I can't forgive you unless you admit your offense.;-)

>Is advocacy of eliminating the amateur code
> test "terrorism?!?!?"

Nope.
>
> Miccolis must think so considering such an off-the-wall
> question.

Then I will explan it to you.

You and others promote "change" as if all change is automatically good and any resistance or opposition to change is automatically bad. I simply gave a clear example of how "change" is not always good.
Simple.
>

> >DO use that service.
>
> The FCC does not require any part of its staff to USE

> amateur radio...nor to be licensed as an amateur.

Are you part of the FCC, Len? I don' think so.

FCC is empowered to regulate civilian radio in the USA. You aren't.
>
> The FCC allows ANY citizen to comment on its
> regulations about any radio service.

No one disputes that. Least of all me. That has nothing to do with my statement:

"Rather than present a coherent future direction for a radio service that you don't even use, you sit on the sidelines and argue endlessly with those who DO use that service"

It's a true observation.

> Miccolis favors "turf ownership," part of the human Territorial
> Imperative which is, in this case, false and misleading.

I have no idea what this is supposed to mean.

> I will
> not stress that it is also against the First Amendment since
> some amateurs feel that it does not apply to anyone
> concerning amateur radio regulations.

WHAT is against the First Amendment? Stating this?:

"Rather than present a coherent future direction for a radio service that you don't even use, you sit on the sidelines and argue endlessly with those who DO use that service"

ALL are free to comment to the FCC or on this NG. I have never told anyone to shut up or go away. Nor have I said anyone should not comment to the FCC.

> >And when opposed, and your errors revealed and rebutted,
> >you call your opponents names and insult them with snide
> >comments.
>
> So...one cannot call N2EY as N2EY even though that is how
> he "signs" his messages?

Where did you get that idea? Nowhere have I said anything against referring to me or other hams by our callsigns.

But you don't do that very often, Len. Even though almost everyone here signs there posts with a first name and callsign, you call those who disagree with you by their last names, or diminutives of their first names, or nicknames you make up based on their profession, nationality, or other characteristic. I think you just don't like calling hams by their callsigns for some reason.

> He cannot be called "Miccolis"
> because using a surname is a "bad name?"

It's inapproriate in this sort of forum. Why do you do it - not just
to me, but to anyone who disagrees?
>
> I do not accept some statements of mine being called
> "erroneous" or "in error" for being based on referencible
> databases.

I know. Even when your errors are pointed out, you don't accept the
obvious truth.

> I do not accept some statements of mine
> being called an "error" because they show certain things
> that are against the error-caller viewpoints.

You don't accept anything you disagree with here no matter how much
proof is presented. That's obvious, Len.
>
> > If you are the
> >future, Len, it's no wonder some folks want the past.
>
> Ah, so snide comments, indeed borderline insults, are
> "acceptible" if done by Miccolis but are "unacceptible"
> if done by others against his viewpoints?

How is that a "snide comment", Len? Can't you take a "minor tweak"?
;-)

You keep promoting "change" and decrying "the past" and "antiquity"
but you never give a coherent picture of what you see as the future.
Never.

> Yes, a double standard at work.

Not by me.
>

>>But not me. I'm living in the present, working on the future.
>
> ...and with very old ideas on what constitutes entrance intp
> amateur radio...except to do as Miccolis did....

See? You characterize my ideas as "old" as if that's a bad thing. But
you do not say what YOUR ideas are, other than endlessly repeating
that the code test must go.

And you are mistaken. Nowhere have I said others must do as I did.

N2EY

You must have had a bad antenna system, operating 147.435MHz
or doing DX. Yes, 147.435 has been a real problem for ham
radio, but Riley is on it now. Most of us hams behave ourselves.

Good for FM or Morse code, but not AM or SSB. And you better
have a good harmonic filter on the output of that setup!

> it...

Yup.

You shoulda seen us in the CW tent on Field Day 2000, Steve. We had a
seventh-grade Extra who could do 25 per at least but who didn't have
much contest savvy yet. So I logged for him and gave him some
pointers. He picked up on the game and was doing really well after a
short while. I wish I was nearly as skilled as him when I was a
seventh-grader.

Yet there are those would deny him ANY amateur license until he was at
least 14.

Toll,
It was because the hams themselves requested it. ARRL and individual hams had become disgusted with the junk that was being carried on and pressured FCC to do something about it.
It was at this time that Mr. Hollingsworth was promoted to Legal Counsel for the Enforcement
Bureau. At the same time, there was another storm brewing out in Wisconsin and in Michigan
from consumers being swamped/receivers paralyzed by illegal CB stations. No need to rehash
the results of that. Anyway, a few out of the larger number of hams were creating much adverse
attention in the international community, so ARS was hit first. Rest assured, it won't stop with
ARS. No need to argue over that, either. Que sera, sera.

I started out in radio with a CB set with a bad mike. Heard
complaints about a "carrier chucker" from a few local
ops when I tried to talk. Got that fixed and was able to
do the CB thing. Then graduated to a ham tech license
back in Oct 76 (hey, I'm about to be a quarter century
ham). First ham contact was in the novice 80M band
using CW, then I got on 2M FM. For a week or so
I carried a Motorola HT220 modified for 2M on my
belt. That got old as my belt sagged. :-)

Anyway, ham clubs would seem to be mainly for
running a repeater or organizing field day events.
Back in olden days, mere mortals couldn't afford
a decent HF station, and so hams clubbed together
to build a good setup, assuming they could find free
real estate to set up in. Today, such clubs probably
still have that now vintage equipment and individuals
each own good modern rigs.

Toll,

Me fears ya just said a mouthful. I admit I run into them all the time.
Like the time I retubed and
cleaned up a Swan 700CX and took it to a hamfest. The rig was perfect in
every way, and the
night before, I talked all over the place on 75. Next day at hamfest, I
quickly found a customer.
Rig had book, all instructions. About an hour later, the two guys that
bought it came back saying
the radio was bad! Yeah right. The stupes didn't know anything about
tuning and loading a
tube rig and burned out a new pair of 8950s @ 90 bucks per pair. Yes, I
gave them their money
back, but not before taking off the cover and showing them what they had
done. I told 'em I
KNEW damned well that radio was fine, and I showed them the burned out tubes
AND the
instruction book--which they never bothered to open. I pointed my finger in
one of the guys'
faces and said, "DON'T YOU EVER COME BACK TO ME FOR ANYTHING AGAIN"!
I mean, if you can't tune and load a rig, ya gots no business with it,
right?

I know I don't know everything to know, but that's the thing that attracts
me to ARS--I'm still
learning. And I can build a mean mobile HF antenna. LOL!

Hey Tim, how come you are on 20 meters every single day? This lends a lot of credence to what Leland says - that you are likely bootlegging on ham bands. Since you can't really have a conversation there my guess is that you look around for a "zoo" frequency to play on.

Hope they nail ya.

Did a little DX, that is, until the TR9230 2mtr all mode was stolen (along
with the car it was installed in) :(

>Yes, 147.435 has been a real problem for ham
> radio, but Riley is on it now. Most of us hams behave ourselves.
>

Agreed. And most SERIOUS CB operators do the same.

Its the same on all fronts. Every group has its bad apples. However since
their is a ratio of 5 to 1 (I am guessing, but
would actually believe in practice, that ratio is low) CBers to licensed
hams, we have 5 times the idiots that
you guys have on your bands.

5 times is a lot. Makes us look bad. That doesn't mean that every CBer is
a bad apple, runs fiendish amounts of
DIRTY power, or talks bad about everyones girlfriends / wives, either.

lol.

I have a mint Pal 201BDX sitting on my bench now that I am not willing to give back to the original owner, because I just put 200 dollars worth of 8950s in it.

Has the 15 meter coil as well. Its a kick ASS amplifier. I doubt the owner will ever see it again, though. He has went through a couple sets of used tubes (testing 90 percent or better on the Sencore), and said it was the tubes.

So, when he comes up with the cash for 6 8950s, he can have it :)

Depending on the band, from 200 to 1500 PEP output, +/- 10 percent.

we
> can legally build linear output amps for use on most ham
> bands. Even 10 meters if we build one for our own personal
> use.

Agreed.

>
> Why mess with illegal 11 meter CB stuff if you have a ham license,
> Toll Free?

I mess with whatever I like to do. I enjoy some of my friends that I have
met on this newsgroup and talking with them on the freeband. They have
no interest in becoming licensed hams (because of posts like yours that I am
responding to right now... But don't take offense. Some people get turned
off by that attitude), but enjoy the hell out of radio.

And with the prices the way they where on multiband HF equipment, I don't
blame some of them for sticking with their 125 dollar modified 148s. Not
all of us can afford a 781A, ya know? Prices are getting better, but this "
HF Radio on a Chip" thing is going to bite us in the ass already. Hams
are now looking to get RID of the DSP and go back to mechanical filters.

Oh well, I enjoy both services, and will continue to operate both. I will
also continue to promote people to use power properly in WHATEVER
SERVICE THEY WANT TO, even if it means they are illegal.

To each his own. But your point is taken, and was made almost 10 years
ago when I got my ticket.

I wasn't talking about spectral purity. And I agree.

However, my point is, that it DOES happen.

You are such an eloquent writer!

Sooo, just because YOU don't like the contests, that means it should be ILLEGAL???

There are sooo many other places that a person could go to have a QSO. Have you tried 2m SSB?

Perhaps the reason that the bands are so crowded during a contest is that there are a lot of hams ACTUALLY OPERATING AND ENJOYING THE CONTEST???? Why not try it instead of complaining??

I personally don't like traffic nets, but I don't want to make them illegal!

Contesters do a lot for the hobby.... coming up with new communications methods (i.e. PacketCluster), finely honing their operating skills and stations, trying out new antennas and radios. The big thing with some of the contesters I know is running QRP and Fox hunting. It is not so much how much power, but how efficient your operating skills are. And of course every contest I know has Mid-power and low power categories. But again this requires more skill.

I don't expect everyone to like contesting. At least I respect the other person to be able to like this thing they like to do.

I like contests, not because I try to compete for the high score, but it
provides a steady supply of quick contacts when I'm trying out an
antenna or rig. Also, the "WARC" bands (10MHz, 18MHz and
24MHz) usually do not have contest activity when the more traditional
HF bands are hopping with contesters.

I have found HF to be a lot of fun since I got my Extra Lite :-)
Been mostly SSB, but there's a code key around here somewheres...

6261. The Rant Is Back

Newsgroup: rec.radio.amateur.policy
Date: 2001-10-24 01:29:26 UTC
From: Hans Brakob <k0hb@qwest.net>
Message-ID: <a2336c1e658ff54859856c6ef885182b.15732@mygate.mailgate.org>
Source record: 22455
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Following ranting heard on 14.175 MCs

Originally scheduled for return on 1 June 2001, the IARN bulletin service (heard on 14.275 USB, 3.975 LSB,and 3.890 AM for 13 years during 1987 through 1999) and very popular amateur radio talk show came alive again to a shocked amateur radio community. The shock stems from FCC Special Counsel Riley Hollingsworth's devious public representations at large ham gatherings for the last two years that he was somehow responsible for K1MAN's suspending the show at midnight on 31 August 1999. Nothing could be further from the truth.

The reason given by licensee Glenn Baxter for this action was the pending $10,000,000 lawsuit for libel against the FCC for its bogus fines against K1MAN for perfectly legal bulletin transmissions which the FCC tried to maliciously and falsely characterize as willful interference (a felony). K1MAN appealed to the full Commission and this entitled appeal was illegally "deep sixed" by the FCC and thus blocking K1MAN from the Court of Appeals in Washington, D.C. where they knew full well that they would lose. A pretty slimy bunch, indeed, who are simply afraid to face K1MAN in open court. The Supreme Court in Washington has inscribed on the building "Equal Justice Under Law." What a sham the corrupt FCC makes of the great United States of America!

K1MAN sued the Commission for libel under the Constitutional Amendment that guarantees the right to petition the government for a redress of grievances. United States District Judge Gene Carter dismissed the suit with prejudice, and this dismissal was upheld by the Court of Appeals in Boston. We have enemies in this country that are just as dangerous as Mr. Bin Laden. These enemies will do away with due process of law as well as the rest of the Unites States Constitution if we allow them to.

Riley Hollingsworth of the FCC swaggers around the amateur radio community and scares hams with his illegal and bullying tactics and covers this with a claim to be "cleaning up" amateur radio. He has done that, for sure, but at the expense of the United States Constitution? And you fools and ARRL are buying this?

This is what the American Amateur Radio Association is all about. We need an amateur radio representative organization with the courage to stand up to this devious and slimy bully (Riley Hollingsworth) whose real agenda is to deliver our valuable HF spectrum to the commercial interests. Make no mistake about this fraud who resides at the FCC

and who gets paid by our hard earned tax money out here in the real workaday world.

Fortunately the United States government has checks and balances to fight corruption, and one of these is called freedom of speech and freedom of the press. This is what the IARN Amateur Radio Talk Show is for all of us loyal Americans at this defining moment in the history of amateur radio.

So, Riley, old pal, the opera isn't over until the fat lady sings, and we challenge you to try and trash our precious (and hard fought for) United States Constitution. You, at the FCC, have won a few rounds by cheating and have fooled many fellow radio amateurs by your clever and cunning trickery, but this football game is far from over.

We at AARA, the American Amateur Radio Association, are glad to be back in the game, and we are going to fight hard to preserve our wonderful hobby and valuable public service called amateur radio. You cheap and tricky politicians are going to have to compete for our valuable radio spectrum in the proper manner and through honest methods in the full view of public scrutiny and the sound understanding by both radio amateurs and the public of what is really going on here. 73, and good luck in the contest, Mr. Hollingsworth.

Exactly the opposite. I'll give the prize anyday to the guy who built
a single-frequency QRP CW rig from junk parts, unwound an old
alternator to make a longwire tuned perfectly for that exact
frequency, and worked the world for $0.

You mean, like CW? ;)

Boy, that one could really piss off the "If it ain't CW, it's just CB"
corwd, pointing out that a CW pileup is nothing more than a CB
shootout with a lobbying organization.

Try to please everyone, and you'll please no one. I, for one, care nothing about pleasing people who endorse criminal behavior that endangers the life and/or safety of others.

Besides, complaining about whether a post is on top or bottom is pretty lame.

lol

Judging by the number of amateur "appliances" sold every year, I doubt that
is the masses.

And last time I looked, not too many of the amateur contesters using that
type of equipment.

Next troll, please.

Have
> you tried 2m SSB?

Yes, please see other post describing my 2 meter station. TR9230 with 8877
homebrew amp.

Had a small mirage Class AB brick to drive the 8877 with, due to 10 watt
output of Kenwood, though.

It was thoroughly enjoyable. As is my CB DXing, and amateur radio DXing.

I can, and do, enjoy both services.

>
> Perhaps the reason that the bands are so crowded during a contest is that

Of course. Same with the CB shootout contests. They judge the power levels
by
the amount of transistors in the final output amplifier, or the number of
alternators
in the AC output categories.

>
> I don't expect everyone to like contesting. At least I respect the other
> person to be able to like this thing they like to do.

So do I. Thank you for sharing this with us. You have totally agreed.

Depending on the amount of QRM, either, both, or neither.

It was a licensed, ACTIVE amatuer that taught me how to build tetrodes with handles.

I will be forever in debt to him, as well as his 35 Kilowatt 4CX15000 station.

Because the ham bands are infinitely more important than the cb
garbage band and hams had been requesting the FCC to do something
about the bad apples in ham radio for some time. They do not want
ham radio to become anything like the sewer pit of
miscommunications the children's band is, so Hollingsworth was
appointed to clean it up. When he gets done there, cb is next.

Only if your licensed in the USARS and operate CB radio.

Lawrd knows we can't do BOTH at the SAME TIME!

I think 10% is better than par for "joiners" in hobby clubs.

About 1% of fishermen join clubs.
About 3% of woodworkers join clubs.
About 1% of stamp collectors join clubs.
About 1% of deer hunters join clubs.
About 0% of joggers join clubs.
Etc........

With all kind wishes,

de Hans, K0HB

Nope. Generally, the guys doing that are pretty much unique in that
they don't feel the need to slavishly follow the 'bigger is better'
crowd.

>And last time I looked, not too many of the amateur contesters using that
>type of equipment.

Not many, but they're the ones who know that *they* earned every point
they made, not Kenwood, Yaesu, or Icom.

I have no intent of working only with homebrew QRP stuff, but I do
intend to build some for the real challenge.

I'm not trying to mock anyone, Toll. That (drunken CB'ers sitting around parking lots) is just a very common type of mobile Cb'er seen around here. You can hear them, and see them as you drive around town, every night of the week (drunk as a skunk and talking trash on the CB).

You're talking about a small minority of hams on a limited set of frequencies, while I'm talking about a widespread problem on the CB frequencies. The two issues are not even in the same ballpark (and one has been reduced even further while the other is still commonplace).

> Denial is the worst form of vanity.
> I agree that CB needs to be cleaned up,

I agree. So why do you insist in endlessly downplaying the problems on the CB frequencies? If the CB radio service wants respect, then it has to clean up the problems first. And that means honest CB'ers (those running legal stations and not causing problems) have to start screaming for enforcement and stop empowering those who do cause the problems (socializing with them, ignoring their illegal activities, etc).

> but I don't agree with a bunch of hams
> attacking CBers when they try to run
> clean power,

Those operators are being "attacked," as you call it, because they are operating illegally. I would just as quickly "attack" a fellow ham, or a member of any other radio service, who was operating illegally.

> NOR do I agree with amateur operators
> coming to rec.radio.cb telling us how
> fucked up this radio service is, when their
> own is coming under scrutiny for the same.

First of all, I didn't come to rec.radio.cb. I'm posting from a ham radio newsgroup to a cross posted thread. Second, as long as I have a CB in my desk drawer (a handheld I use in the truck occasionally), I have just as much right to be in rec.radio.cb as you do. And, finally, the problems in ham radio are not the same as those of CB - the problems associated with the CB radio service are much more severe and much more commonplace. And it is the hams themselves who have

requested the increased enforcement of ham radio, while no such
widespread request has come for CB'ers (including yourself).

> You think the ratio of bad apples to
> good isn't about the same? How many
> ACTIVE licensed amateurs are on the
> air? How many CBers?

Sorry, my friend, but that just doesn't cut it with me. I was a
CB'er for over twenty years (in 6 different states) and now a ham for
almost five. In fact, I suppose you could still call me a CB'er if you
count the very rare use of a handheld while traveling. At one time,
there were more good CB'ers than bad. But that is simply not true
today. The overwhelming majority are operating illegally (out of band,
excessive power, etc) or violating the rules in one way or the other
(foul language, causing fights, and so on). The exact opposite is true
for ham radio - the overwhelming majority operate properly and don't
violate the rules.

> This would actually be fun to look
> into, as I KNOW the amount of hams
> is dwindling.

And how would that compare to the slow decline of CB since it's peak
in the seventies?

> Take a look at the big 3 ham mags.
> All they can talk about is how it is a
> dying hobby. Sad but true.

At least there are hams magazines to talk about. Care to name a
single magazine dedicated solely to CB still in existence? Care to
name one with anywhere near the same number of subscribers? Care to
name one with the same level of technical coverage? Or perhaps we
should talk about books instead? Or perhaps you'd like to show me the
CB radio organization with the scope and influence of the ARRL? If
you're going to use talk in a magazine as proof that a hobby is dead,
then it should be very clear to you that CB was dead a long time ago.

> CB is growing more and more. Which
> yes, means you get more idiots.

Care to provide some proof of that? CB is nothing but a shadow of
what it was in the seventies. And, based on what I've seen, it has
been in slow decline ever since (in spite of the occasional peaks of interest).

> > However, if you compare the USE

> than is necessary for comms. 100 watts
> is what comes out of the rig, thats what
> they run.

Well, the last time I checked, it was legal to run 100 watts on the ham bands. But, regardless, your response avoids the subject of illegal power amplifiers (running more power than necessary is not an illegal power amplifier). So how does your comment about running more power than necessary dispute my comment about the use of illegal power amplifiers in the two radio services? For that matter, I noticed your message avoids responding to most of my comments (the treatment of women, for example).

Both you're not enjoying both services, Toll. You would have to actually be operating within a service to enjoy it - the so called "freeband" is not a radio service, it is a violation of the rules of the CB radio service. So, by your own admission above, you're operating illegally on frequencies outside one service ("freebanding") and who knows what you doing with the other radio service. Are you even licensed to operate in the ham bands? At this point, I sincerely doubt it.

While we're on the subject, is there anyone out there that still likes fast food? I've almost gave up completely on fast food joints. I just cannot stand the taste, or lack thereof. What happened to "REAL" food in this country? Even the meat at the grocery store has changed (it is almost impossible to find a decent steak, or decent hamburger for that matter). And the pre-prepared stuff has hit rock bottom - I HATE ARTIFICIAL FAT FREE FOOD.

Luckily, there's a Griff's about 20min away...standard Dairy
Queen-like burger joint, except that the burgers are still actually
meat colored, greasy as hell, and rather large.

Other than that, I pretty much have to head back to my hometown to get
choleserol served right.

Actually, Dwight, you were very close...

A "keydown" (or at least one type) is an event where "operators" meet to compare some monster mobile radio installations.

Have you seen any of those "Penetrator" type antennas that have bonding strap or conduit in place of the wire-wound coils? Chances are, with the exception of the guy who gets one for purely aesthetic purposes, that under the hood are extra alternators, 200w linears used as buffer amps, and "trunk" amplifiers running into the tens-of-thousands of watts.

Other that to do it just for doing it's sake, I don't know what these IDIOTS think they are trying to prove. I met one of these jerks in the parking lot of Crittenden Memorial Hospital in West Memphis a few years back. He was quite happy to show me his "power pack". I asked him what he did with it, and he told me, literally, that it was "...doing the keydown lockdown on any ********* channel I want to. When I key down, NO ONE talks..."

I am sure they don't. But on 11 meters, who CARES...?!?!

Living proof that some folks have more money than common sense.

because youll never again have to replace that 45 dollar tube if its tuned properly into a good load. it is done to make the amp more bullet proof and not
to increase the power output. i own a 4 tuber 811a amp myself that i am getting
ready to retube with 572b's and replace the power supply to allow them to run
full output.

Hey, if it don't use two tin cans and a string, it's just CB!

It also shows that they know nothing about signal strength. In a QST article about two years ago, tests were independently done on signals with and without an amp. A 100 watt signal produced a reading of s-5. Boosting it to 1000 watts with a linear only produced an increase to s-7.

All that power for a two point increase in strength? I'll take a good antenna any time. Besides, you can't work 'em if ya can't hear 'em.

Most of the ones I have dealt with basically could care less about anyone else, but themselves and are the radical religious-right type. The kind that would make Rush Limbaugh as simplistic as Winnie the Pooh. The real irritating type.

I am glad that I do not support either party, nor do I believe that these are the "only" two parties to choose from. Both parties see it as that. Granted, they are the two largest though.

Ryan

I agree. I spent my time putting together a LOWFer station back in High
School as my
final exam project in electronics class. While everyone else was using 555
or 556 timers to
make stupid little fart noises or beeps, etc., I built a working transmitter
and QSL'ed almost
the 11 western states. It was a blast. Found out interesting things, too,
like black PVC is
about useless at RF, since it has something in the paint that screws up
inductance calculations
pretty bad.

So, I guess I can say Been their, done that. It is fun, though. I just
prefer building high power
amplifiers now. Nothing different, except the power levels.

>
> >And last time I looked, not too many of the amateur contesters using that

>

It can be a blast. When you really want to get down to it, build a couple
single or dual tube
transmitters. Pain in the butt, but it is nice to have your filaments light
your logbook rather than

a lightbulb :)

Nobody has argued against that.

You guys are so quick to jump the proverbial CBers ass, that you don't realize what
your saying, nor that I have agreed with you.

My statement was, and still is, that if your sitting side by side in a mobile, with the same antenna
systems, the guy with more watts is going to win the competition.

Bottom line.

Well, then someone should smack the shit outta them, and I truly hope
that local law enforcement takes care of their drunken activity. One thing
I can't stand is an alcoholic. They are worst than most other drug abusing
types, since they view their vice as "legal", it can't be as bad as anything
else,
and it makes their attitude worse.

You can hear them, and see them as you drive around town,
> every night of the week (drunk as a skunk and talking trash on the CB).

Hopefully they don't kill anyone.

Of course, in Texas, they will die anyway... We aren't afraid to flip the
switch
on deserving sons-of-bitches.

No, you shouldn't be. Just because someone enjoys something you don't
doesn't make them the idiot, though.

Your lack of comprehension in the fact that someone else could actually like
doing something you find no enjoyment makes you one, however.

lol

I know Tim personally, have met him, and consider him a friend.

You have never met him, and know him from nothing but a newsgroup.

You believe EVERYTHING you see on the internet.

I also retract my statement about him not owning an amp. I just remembered
he did pick one up while I was away from the newsgroup.

However, Yeah, I do consider myself his guardian angel. Jealous?

Please figure out the number of active amateurs, and the number of active
CBers.

Then look at the ratio. Its about the same, I would venture to guess.

We have millions upon millions of active CBers throughout the US

Hams have thousands. You do the math.

>
>
> > Denial is the worst form of vanity.
> > I agree that CB needs to be cleaned up,
>
>
> I agree. So why do you insist in endlessly downplaying the problems
> on the CB frequencies?

I'm not downplaying them at all. I am making a point, in that the amateur
community
constantly plays down the amateur problems, and points the finger at CB
radio.

You guys have thousands of operators, we have millions to contend with.

And yes, since their is no licensing structure, and CB is plug and play, any
idiot
can and does get on the radio. However, Cb radio still does, and ALWAYS
will have some decent operators. We escape to the freeband to get away
from the idiots.

Nice thing about Cb radio is you DON'T end up with the class structure that
is so prevelant within the amateur ranks, due inherently to its licensing
structure.

Not saying that is a bad thing, or a good thing. Just pointing it out.
Both services
have their problems and issues.

If the CB radio service wants respect, then it
> has to clean up the problems first. And that means honest CB'ers
> (those running legal stations and not causing problems) have to start
> screaming for enforcement and stop empowering those who do cause the

They do.

> First of all, I didn't come to rec.radio.cb. I'm posting from a ham
> radio newsgroup to a cross posted thread.

Noted. I don't look to where something is posted to make a reply, as I feel
it shouldn't make a difference. I speak my piece, and will defend it to
anyone.

However, I didn't see this was cross posted until you pointed it out.

Second, as long as I have a
> CB in my desk drawer (a handheld I use in the truck occasionally), I
> have just as much right to be in rec.radio.cb as you do.

I never said you did, and I don't believe a CB radio is a requirement to use
this forum, either.

And, finally,
> the problems in ham radio are not the same as those of CB - the
> problems associated with the CB radio service are much more severe and

> much more commonplace.

Because we have several hundred times more operators than the ARS.

Take a look. Your ranks are falling off. CBs are still sold every day.

Why can't the hams figure that out. Yes, CB is a mess. Yes, Amateur is a mess.

However, all the hams do is trash CB because we have more idiots, and it is more prevelant. We
have millions of operators crammed into a little portion of spectrum. You HONESTLY think
that if ALL of amateur radio was stuck in 75 and 80 meters in the US that the amateur community
wouldn't have the same problems the CB community does?

Pull your head out of the sand!

And it is the hams themselves who have
> requested the increased enforcement of ham radio, while no such
> widespread request has come for CB'ers (including yourself).

No, I'm not going to go crying to someone to please clean my band up.

The idiots come and go. Usually selling their butchered equipment to the next
moron that wants a radio because Jed has one in his truck / car / rv/ whatever
gave him his first taste of radio.

However, the idiots do go. And sometimes their equipment is sold to someone who
will clean it up, and use it respectably. I have quite a collection of piles - of - crap in
my garage that started out as trashy no limiter having tweeked to hell and back.

However, if the case is good, I will put the effort into turning it back into something
that is decent to operate.

But don't tell me that I haven't been a proponent of cleaning up CB. I don't agree
that linears and export radios are the root of all evil, I say run power if you want,
but run CLEAN power. THAT is the difference.

I suggest you research your claims about others before you go offhanded stating things
that you don't know about.... Especially about other people.

That totally depends on what area you are in.

When I was in Southern California, 2 meters was worse than 11 meters was,
and 11
meters was a MESS. CB shops would sell people 250 watt linears because
without
them they wouldn't be heard AT ALL.

Here in Texas, I find the opposite to be true. Most of the high power
operators are
decent, and have fun, but don't provoke, practice good neighbor policies,
and honestly
try to help people. I am honestly amazed at it, after being subjected to
other areas of
assanine attitudes.

However, I was shunned by the local amateurs during the MS150, when I walked
up,
HT in hand, and asked them what their call in frequency was during the bike
ride. I was
part of the Baker Hughes Bicycle chase team, and felt the need that I should
at least make
an attempt to help with the comms since I am also a LICENSE AMATEUR
operator.

They told me basically to go to hell. They also never knew I was a CBer.
They didn't need
me, nor did they want me.

About 3 hours later, I scanned the band, found their active call frequency,
and called in a DUI that
had run a couple bikes off the road. He was later apprehended, and the
bikers where safe, but shaken.

So don't you come and tell me their is no bad apples in amateur radio. It is one of the most
elitist groups of people to come around since the SS. I know. I am an amateur operator.

(however, I do also believe in not letting the idiots of the group keep me from enjoying my
hobby, so I didn't trash my amateur equipment at the time. I still use it, and still enjoy it.)

>

> > This would actually be fun to look
> > into, as I KNOW the amount of hams
> > is dwindling.
>
>
> And how would that compare to the slow decline of CB since it's peak
> in the seventies?

lol.

Take a look at sales. CB had a resurgance in the 80s, and again in the early 90s.

That comes from a CB Scene article in Popular Communications in the early 90s, when
they where saying CB was dead in another magazine.

CB comes and goes. It is probably on its way out, since computers and the internet have
not been flooded into everyones homes. However, I doubt that the hardcore hobbiests will
leave. It is too much fun.

>
>
> > Take a look at the big 3 ham mags.

>
>
> At least there are hams magazines to talk about. Care to name a
> single magazine dedicated solely to CB still in existence?

The amount of manufacturers of CB radio has dwindled. That has meant the amount of advertisers has also.

That doesn't mean the service is dead.

Yes, ARS has its place.

However, you STILL CAN'T argue the fact that their are less amateur operators
than their are CBers.... No matter HOW you try and word it. Hell, even the

amateur magazines will admit to that!

Care to
> name one with anywhere near the same number of subscribers? Care to
> name one with the same level of technical coverage?

They can't put technical articles in CB magazines since they are illegal to
modify.

11 meter times and journal proved that point.

Or perhaps we
> should talk about books instead? Or perhaps you'd like to show me the
> CB radio organization with the scope and influence of the ARRL?

lol.

The ARRL is a joke. It has its good moments, but overall it is a joke.

A LOT of the amateur community agrees.

If
> you're going to use talk in a magazine as proof that a hobby is dead,
> then it should be very clear to you that CB was dead a long time ago.

Yup. And the sales of CB radios, amplifiers and antennas proves it, doesn't
it.

As well as the frequency and volume of posts to the CB radio UseNET group.

>
>
> > CB is growing more and more. Which
> > yes, means you get more idiots.
>
>
> Care to provide some proof of that? CB is nothing but a shadow of

> > than is necessary for comms. 100 watts
> > is what comes out of the rig, thats what
> > they run.
>
>
> Well, the last time I checked, it was legal to run 100 watts on the
> ham bands.

No, not if you are able to maintain communications at a lower power level.

But, regardless, your response avoids the subject of
> illegal power amplifiers (running more power than necessary is not an
> illegal power amplifier). So how does your comment about running more
> power than necessary dispute my comment about the use of illegal power
> amplifiers in the two radio services?

It doesn't, wasn't intended to, and you completely missed the point.

I was bringing up the fact that it is illegal to use more power than
necessary in the
amateur radio service. Amateurs run illegal. CBers run illegal. Fact of
life.

For that matter, I noticed your
> message avoids responding to most of my comments (the treatment of
> women, for example).

I treated it as the jibberish that it is. So basically, screw CB, since
their are people who are
profane, but amateur is OK, since you had to study to get a ticket, and have
to say your
better to make yourself with your elitist attitude LOOK better? At least
their are those
of us in both services that can get along with all, and DON'T have to make
themselves look
better, and OVERLOOK the fact that their OWN bands are dwindling due to lack
of use,
profane and flagrant abuse, etc. Both services have their problems. Your
attitude is "My service
is better, though, since we don't have as many troublemakers"... BULLSHIT.
You don't have
the number of users crammed into the same amount of spectrum, so you can't
even begin to
compare the two!

Most of the amateur community is a good lot, I will agree with that. Some
of the CB community
is a good lot. You probably WON'T agree with that, since your involvement
in CB seems
to be with idiots only.

Well, bud, you know what, you hang with idiots, thats what your going to
find. Sorry your use

of the CB radio was so bad.

Another ?.... If you hate CB so much, and think they are all a bunch of idiots, why did you
stay in it for 20 year?

As I understand it, the First Amendment protects people from the govt.
, and to a certain extent, from each other. But since anyone with
usenet access can post here, I don't see what all the First Amendment
fuss is about.
>

Anyone can have ideas, Steve.

> He doesn't have a license, ergo cannot
> participate in any Amateur activities for the most part.

He can still have ideas.

> No participation
> means a lack of appreication for what the NEEDS of the Amateur Service are.

Maybe. Maybe not.
>
> No experience...again...

Doesn't really matter. Anyone can have ideas about the ARS, and they
are welcome to post them here.

But if you filter out the noise, what is left of Len's postings is
pretty sparse and repetitious. From what I have read, in both his
posts and reply comments to the FCC, his suggestions for the future of
the ARS come down to this: (These are HIS ideas, not mine):

- Get rid of code testing
- Reduce the number of license classes, aiming at a single license
class. (But no details on the test requirements)
- Institute an age limit of 14 for any ham license in the USA.

And that's about it. Interesting.

I do operate within the legal CB band. I also operate in the freeband.

So because I operate in the freeband at times means I can't also operate in
the
CB freeband and NOT have an opinion about the legal band?

You have a messed up outlook on life if that is what you TRULY believe!

- the so called
> "freeband" is not a radio service, it is a violation of the rules of

>We are not talking about comms, we are talking about a shootout competition.
>Listen during CQWW and you will find the same things on the amateur bands.

That's called a "pile up" and it's a recognized communication tool;
even the shipboard CW maritime operators utilized that technique for
some 80 years in order to pass their time-sensitive weather observations
every six hours. Don't attempt to equate your "shoot outs" with an 80+
year-old highly efficient communication method; that you'd even try
shows you have no understanding of basic single-channel mass comms.

>I can also win a keydown against the biggest amp you can
>find. It's easy. All you have to do is know how to communicate.

"Key-down" and "communication" are contradictory; doing one prohibits
the other from occurring.

I love the way the FCC quietly goes about its business subtly
collecting bits of evidence from here and there, maybe in your
neighborhood, maybe from a distant monitoring station, maybe
from on here, then jumps on the federal criminal with huges
fines and confiscation of communication equipment. From then
on other agencies such as the IRS join the fray and carefully
scrutinize this individual, who will for life have a federal
conviction on his record. Is all this worth it to you? It's so
easy to live a law-abiding life -- why not try it for a change?

Same here, Dwight. The stuff available in most chains is too salty,
too sugary, too bland and too processed.

> What happened to "REAL" food in this country?

Part of the change is the use of cost-effective production methods.
Things like feed and breed choices are based on how many pounds of
finished product can be delivered for a given dollar spent to grow
them. Much of what we eat has been frozen or near-frozen at some time
in its prodction, even if it's not frozen wehn we buy it.

> Even the meat at the grocery store has changed
> (it is almost impossible to find a decent steak, or decent hamburger
> for that matter).

You have to make 'em yourself. Takes time.

>And the pre-prepared stuff has hit rock bottom - I
> HATE ARTIFICIAL FAT FREE FOOD.
>
The latest nutrition info I have read says that "fat free" isn't
always good, and in many cases is bad for you! Here's the theory:

- Sugar (simple carbohydrate) is the worst thing for you. Not just
refined sugar, but sugar in any form. Complex carbs are only slightly
better. The reason they are so bad is that many people's bodies react
to sugar intake by converting it directly to fat, which is then
stored, rather than glyogen, which gives you energy. And sugar does
not make you feel full. This is why many people on lowfat diets have a
hard time losing any weight, feel hungry all the time and are tired
after a meal.

- Fats are not all bad. Some mono- and poly-unsaturated fats are
actually good for you, consumed in the right quantities. If you eat no
fat you're never satisfied. The "best" fats are olive, canola and fish
oils.

- Protein is essential, and is the backbone of a healthy diet.

How does this work out in real life? Consider the following two breakfasts:

Oatmeal with skim milk and raisins, plus orange juice.

Three-egg-white/one egg yolk spinach omelet, plus green tea.

The oatmeal breakfast is mostly carbohydrates and simple sugars. The protein and fat are both low, so many people don't feel full. The sugar may give a burst of energy, but 2-3 hours after such a breakfast many people will be hungry and drowsy.

The omelet breakfast has more protein and fat but far less sugar, and for many people will last a lot longer.

Often a person will lose weight on one diet and gain weight on another, even though the calories are the same.

That would be a contest as to whose receiver front end would be first to get trashed.

BTAIM, other things figure in also. Such as operator skill, mode, which band is being used, and location. I would put my money on a location close to the ocean and 100 watts, against a QTH several hundred miles inland and 1000 watts.

Krell still misses the point.

It is organized between classes that are compared by the amount of transistors in their final amp.

It is in a cordoned off area, with two lanes, similiar to the way a drag strip is arranged, via lanes.

They are both going to the same station, which has a tape recorder going, and the person who is heard over the other advances to the next round.

Their are no other variables, unless one is cheating.

Your entire argument is over something entirely different!

HAHAHAHAHAHAHAHA
Its a recognized communications nightmare today. Just look at the amount of
people
complaining about the contests in magazines, and the problems inherent with
them.

Not many people can get through when "the big guns" are operating.

Most also take up excessive bandwith, and actually USE that as a tool.

Nobody said CBers where any different, but your calling a pile-up a
communications tool
is simply amazing.

> even the shipboard CW maritime operators utilized that technique for
> some 80 years in order to pass their time-sensitive weather observations
> every six hours.

And they still do today? Doubtful.

The pile-up of yesteryear might have been helpful. Today it is a nuisance.
As are contests.

Don't attempt to equate your "shoot outs" with an 80+
> year-old highly efficient

When does the efficiency come into play? When the DX station is responding
and
some idiot is actually KEYING on him while doing so?

At least with CB shootouts our keydown period is on the order of 10 seconds.

communication method; that you'd even try
> shows you have no understanding of basic single-channel mass comms.

On CB shootouts, we aren't using single channel mass comms, and contesting
has
nothing to do with that today.

>
> >I can also win a keydown against the biggest amp you can

Yes, and having a contest going pretty much precludes me from using my
5 watt QRP rig (because I lost the finals in my TS440 while I am at sea
and that is all I can milk her for, while my ship is going down) to get
help.

Not saying it would be impossible, just a HELL of a lot harder.

Yes. 75 meters is becoming a joy to operate again.

From then
> on other agencies such as the IRS join the fray and carefully
> scrutinize this individual, who will for life have a federal
> conviction on his record.

Actually, that isn't true. After a statute of limitations, you can apply
for
your rights back, and have that felony removed or "stricken" from your
record.

Nice try, though. Wanna go another round full of half-truths?

Is all this worth it to you? It's so
> easy to live a law-abiding life -- why not try it for a change?

I have Jeff. And for the most part (aside from the occassional traffic
infraction or operating my radio in a way you don't see fit) I still do.

Early 90s Popular Communications magazine reporting that CB radio is on the upswing.

Sales figures and the reasoning for RCI (which is basically a CB radio company now... They found more sales in the CB category than they did in comm. or amateur market) to go to making legit CB radios, having owned a CB radio shop in a semi-rural area and watching the amount of people and diversity of them using their CB radios.

Not to mention listening to 11 meters during the band openings.

If I am lacking credibility in your eyes, then I am actually somewhat happy.

In another thread, you couldn't differentiate between someone sitting aside
from someone else in
two mobiles having a shootout and two fixed stations sitting in different
areas.

That's credibility?

That still doesn't explain where you came up with the "millions upon millions"
claim of active CBers. Did Pop Comm and RCI make this claim? Did they take a
poll? If so, what were the results? I seriously doubt that the number is in the
"millions" as you claim.

Talk to friends of mine that have no inkling to get an amateur license, but whom might just be as intelligent as
other so called "experts" in the amateur bands.

Seems pretty simple, actually.

Apparently K1MAN believes that FCC rules shouldn't apply to him - little
things like having an operator at the control point of his station while
it is broadcasting his recorded programs.

Does 'smoke and mirrors' ring any bells?

All this goofball K1MAN thinks about is himself. His idea of ham radio is trashing up segments of the HF spectrum with useless promotions of his organization and self aggrandizing his 'accomplishments' or should I have said 'alleged accomplishments'.

I operate 14.275, and have since his 'coincidental absence for the last 2 years. Recently he has decided to reclaim it. Fine, as long as no one else is there, go for it. Otherwise expect some QRM. I'll leave the frequency when I damn well want to. And go ahead and take me to court on 'felony QRM charges'. This guy is in need of a rubber room.

Joe, a lot of my transmitters are such as you describe; I've built
them out of components taken from junked TV sets. There's no greater
thrill than making on-air contacts with gear you've built yourself
from scratch. My 40m VFO uses a variable capacitor taken from a TV
UHF tuner; I can park it on any 40m frequency and it will stay put
all day. Those variables are built like a brick.

Or is it Aaron = Sparky = Leland?

The writing style seems to match. The use of any particular
name must be linked to the amount of alcohol in him.

You can tell a lot about people by listening to them, or in
this case reading them. If you would just linger and listen
you could also make these determinations.

>type of equipment.
>Next troll, please.

No troll, Toll -- a lot of my transmitters were built from scratch
(see previous post). Homebrewing is another branch of amateur radio
just like contesting, DX, moon-bounce, satellites, meteor scatter,
long-delay-echo, ssb, am, fm, digital, cw, spread-spectrum, QRP, et
al. Just as not all 600 kilo-hams are contesters, neither are all
homebrewers. Yet there are contests open only to those utilizing
homebuilt equipment.

Diversity is what makes this hobby so great.

The amateur radio service is the only service permitted to build
its own equipment without having to go through the type-acceptance
process, and we're the only service permitted frequency agility
(non-channelization). Just those alone show the measure of trust
the government has in us.

How would you know? Anyone can claim anything if proof is not
required. Heck, I can claim that I personally built the space station
as long as I don't have to provide proof of that. Of course, you would
certainly doubt that claim, just like I doubt Toll's claim.

Agreed. And we all know those contest generate as much magazine
space as the CQWW, etc.

My point is only that both services have useless competitions (in
my eyes)... However, they can be fun.

That is inherent.

Although, I have sat and watched most, and the guy who USUALLY wins (read this as, either
has something good as a rep, or is usually running an 8 pill into a 2 pill) takes the same lanes as
the other guys winning.

When talking about RF, the lane choice isn't as distinct an advantage as it is in drag racing.

Some people just don't understand that, though.

You miss the point. I don't care about credibility from my "credentials",
I would much rather have the credibility from being able to shred someones
technically incorrect answers and show them the error in their thinking.

Just like someone putting PHD behind their name does nothing for
me to lend credibility to them.

After all, Clinton got to put President in FRONT of his name. Look
at his credibility. If you only choose to look at ones initials / title /
etc
for credibility, you either don't know the subject well enough to formulate
your own opinions, or don't have enough self confidence to do so.

Either way, it's unfortunate.

Besides, the few people that I DO trust DO have my call sign, and have
stepped forward to show people that yes I DO hold a valid amateur
license.

Sounds good. Do they offer care packages to the "real food challenged" parts of the country? All we have around here are fast food joints and over priced restaurants geared towards tourists.

> Other than that, I pretty much
> have to head back to my hometown
> to get choleserol served right.

I almost moved to Alabama once because of this. I stayed at a hotel with a restaurant during one of my cross country trips and that place served the best pork chops, fried chicken, and barbecued ribs I've tasted in years. Of course, I was darn hungry after several days of eating fast food, so perhaps anything might have tasted good at that point. But I doubt it - the food was good.

Well, all that is nice to know I guess, but knowing why doesn't put
a decent hamburger on my plate.

> You have to make 'em yourself. Takes

Jim. Jim. JIM! All I want is decent tasting food. I don't want to
become an expert on sugar, carbs, or poly-unsaturated fats. My
grandmother is almost a hundred, and I seriously doubt she has any
idea what poly-unsaturated fats are. My step-grandfather died about
five years ago at 87 and his eating habits would drive today's health
food addicts crazy (lots of beef, pork, sausage, sweet deserts, and
everything else on the now nearly banned food list). My very healthy
mother is almost seventy and I doubt she could tell the difference

between a carb in food and a carb in her vehicle. My grandfather on my father's side starts each day with three eggs fried in home-made lard, home-made pork sausage, home-made biscuits raked in butter, rice with pork fat gravy, and a couple of cups of coffee loaded with sugar. And I swear he can still bench press me and he is well into his 80's. And I would like to live to be as old as the rest of my family, and if eating good food (as shown by them) is the way to do it, then I'm all for it. ;-)

What attitude? You mean the attitude that FCC rules should be obeyed?
That frequency assignments should be respected? That power limits

>but enjoy the hell out of radio.

Gosh, I wonder if hams care whether or not people who are "turned off"

Homebrew, QRP, and other contests serve a purpose for many of the hams involved; practice for those times when emergency communications are needed, and power is hard to come by, or equipment has been damaged and repairs must be made with what is on hand.

Last time the power went out, I decided to have some fun with it, and
built a crystal set from scavenged bits of old radios, and a tuning
cap made from foil covered paper towel tubes. The only part I had to
pull from one of my other sets was the earphone. All done in just a
bit over an hour, facilitated by a butane soldering iron.

Of course, having two clear-channel stations (WBAP and KRLD) within
20mi makes crystal set building a bit more tolerant of inefficiency.

When I travel, I just look for Italian restaturants run by *real*
Italians. Enough garlic, olive oil, and tomatoes makes anything good.

Failing that, I just look at the outside of the building; if it looks
like it was once a topless bar or laundromat, or it should have been
condemned years ago, the food's probably good.

The docs keep telling me I should watch my diet because of the family history of heart attacks. Sure, great-grandma died of one at 84. Her brother had his second and last at 92, and my paternal grandma at 78, after smoking over a pack a day for most of her life. Meanwhile, my maternal grandma died somewhat younger from pneumonia after years of exercize and watching everything she ate, trying to keep her cholesterol down.

Granddad was doing very well with his high-grease diet until his car wreck last Christmas. Even still, most of the doctors are somewhat impressed with his overall health and recovery ability at 72. If he gets use of his legs back, he'll probably hurt himself again trying to kick the ones responsible for all the health food he's having to eat.

Sounds like he went to my granddad's dietitian :) At 6'3" and 270lbs before the wreck, he was more active than I am at 25.

Toll Free <tollfree@bigradios.com> wrote:
>Its a recognized communications nightmare today. Just look at the amount of
>people
>complaining about the contests in magazines, and the problems inherent with
>them.

Out of 600,000 hams, how many complaints have you counted? 600? That would be 0.1% of all hams -- statistically negligible. Even if 6000 complained, that would only be 1%.

>Not many people can get through when "the big guns" are operating.

Even if there was a contest every weekend, that's only 28% of the week; but note that the WARC bands are always contest-free.

>Most also take up excessive bandwith, and actually USE that as a tool.

Please quantify "most" and "excessive" and tell us how your arrived at those conclusions.

>Nobody said CBers where any different, but your calling a pile-up a
>communications tool is simply amazing.

You say that because you've never participated in one. I have -- the maritime bands had a world-wide pile-up every six hours for some 80+ years as ships passed their time-sensitive weather observations to shore stations. No other communication technique would have worked as well; after just 20 minutes every ship in the world had passed their WX OBS. Again, this was done every six hours for over 80 years, non-stop.

>The pile-up of yesteryear might have been helpful. Today it is a
>nuisance. As are contests.

So we'll group you with the less than 1% of the amateur community who think likewise -- similar to that uncompetitive group who tend not to get very far in life, always being passed up for promotions and pay raises -- too timid to compete with others. But keep in mind that contesters and traffic handlers make the best HF operators during disaster communications.

>Yes, and having a contest going pretty much precludes me from using
>my 5 watt QRP rig

Nonsense -- there are never contests held on the WARC bands. Never. And no matter what the contest, no one band is completely filled band-edge to band-edge. Also you can always find room on 10, 15,

or 160 meters.

Yes we are. See below.

>>and we're the only service permitted frequency agility
>>(non-channelization).

>No, your not.
>I suggest you look at the 1750 meter license free band.

That's not a "service." 1750m is one of several frequency segments
set aside for Part 5 "intentional emissions" (such as garage door
openers and cordless phones) and "unintentional emissions" (computer
monitors, microwave ovens, et cetera). Hobbiests have utilized the
"intentional emissions" paragraph for comms, but no where in Part 5
will you see any mention of hobby communications; those hobbiests
fall in the same category as garage door openers. Again, Part 5
is not "service," as I specified in my paragraph above.

I suggest you read Title 47 CFR Part 5 -- the CFR collection should
be in any nearby college library.

Snide comments? Maybe you should read your own posts once in a while, Toll.

> > > > All those QRP rigs are for people that don't have a life, I guess. And

As I said before, you should go back and read your own posts. I believe
there is a difference between 'calls' and 'called', the verb from your
own 'snide' remark which -is- the context of this specific discussion.

He got it from Jay, who claims there are 12 million CBers running amps.
Jay, like Toll, refuses to provide his sources.

In what state is it a felony to drive 45mph in a 30mph zone? And are
you saying that everyone (or even most people) do that? Or drive 90mph
in a 60mph zone?

You are reaching again, Toll.

Amatuer Radio is a legal means of communication, the Freeband is not. See
the difference. SSB is Phone btw.

Nobody here is claiming to be a victim.

I was simply pointing out that you ADMITTED to flaming someone, or hassling them, and
we all know that a GOOD amateur radio operator WOULDN'T do that, especially in a world-wide forum.

If you can't handle being called out on what you are doing, I suggest you take a break
and find something else to do.

Or, pick up your ARRL manual, and read the Ham Creedo. YOUR certainly not following
it by admitting your hassling someone else!

Simple case of semantics. The phone is not Phone. Your point, as you wrote
it, was why
didn't I call my friends on THE PHONE, meaning a telephone.

I asked the same of you.

You came off with something nearly unrelated.

> stuff found so far is easily treated anthrax like that found in animals).

Well, the experts disagree with your opinion. Here are several quotes
from a Washington Post article.

"The anthrax spores that contaminated the air in Senate Majority
Leader Thomas A. Daschle’s office had been treated with a
chemical additive so sophisticated that only three nations are thought
to have been capable of making it."

"The spores were treated with a sophisticated process, meaning the
original source was almost certainly a state-sponsored laboratory."

"The finding strongly suggests that the anthrax spores in the U.S.
mail attacks were not produced in a university or makeshift laboratory
or simply gathered from natural sources."

"The presence of the high-grade additive was confirmed for the first
time yesterday by a government source familiar with the ongoing
studies, which are being conducted by scientists at the Army Medical
Research Institute of Infectious Diseases at Fort Detrick in
Frederick."

"Four other experts in anthrax weapons said they had no doubt that
such an additive was present based on the high dispersal rate from the
letter to Daschle."

"The evidence is patent on its face," said Alan Zelicoff, a senior
scientist at Sandia National Laboratories’ Center for National
Security and Arms Control.

David Franz, formerly of USAMRIID and now at the Southern Research
Institute in Birmingham, said, "In order for a formulation to do what
the one in Daschle’s office appears to have done - be easily
airborne - it would require special treatment."

"That particle size, 1ï¿½ to 3 microns in diameter," said Sen. Bill
Frist (R-Tenn.), "is extremely small - a first requirement for making
weapons grade anthrax spores for warfare or terrorism."

From the above it should be clear, even in South Carolina, that we are
dealing with a sophisticated attack on our homeland, not just some

kook with a basement lab and a grudge.

With all kind wishes,

de Hans, K0HB

Ya gotta wonder what it really IS.

And they don't use "a little salt" or "a little sugar" on anything.

What I'm tryin' to tell ya is that a lot of those lists are wrong.

I bet your grandfolks ate stuff that wasn't nearly as processed or
sugar laden as the stuff at fast-food joints.

> My very healthy
> mother is almost seventy and I doubt she could tell the difference

Key word is "home-made". From good ingredients.

> And
> I swear he can still bench press me and he is well into his 80's. And
> I would like to live to be as old as the rest of my family, and if

> for it. ;-)

Yup.

A lot of it is pure genetics. Everybody has an Uncle Harry that did
everything "wrong" and lived to be 97, etc., etc. Also a Cousin Mabel
who did everything "right" and keeled over at half that age.

I go by the philosophy of George Sheehan, who said each of us is "an
experiment of one". Means ya gotta try all different things and see
what works for you. There's no universal solution that works for
everybody. And if eating "right" (whatever that is) makes you
miserable, what's the point?
>
> > The "best" fats are olive, canola and

Yup. He gave his definition, but I know better than to take him seriously here. (For serious Cecilposts, see rec.radio.amateur.antennas).

The term "lie", to most people, means a false statement made by a speaker who knows it is false, with intent to deceive. A "mistake" is just a false statement that the speaker thinks is true.

To most people, anyway.

That's why I call the false statements by LHA and others mistakes or errors, rather than lies. I don't know the intent behind them.

I don't disagree that applies to "most people". Unfortunately, the
masses are ignorant of a lot of perfectly acceptable definitions
taken straight from the dictionary. Webster's says that the speaker
doesn't have to know it's false for it to be a "lie". Check it out
for yourself.

For instance, when the Taliban says The United States is committing
acts of terrorism, is that a "lie" or a "mistake"?

> You came off with something nearly unrelated.

I chose to talk to them thru legal avenues, I don't break the law to talk to
my friends you on the other hand do because of some lame excuse "Because
they choose not to talk their, to escape the majority." You can do the same
thing on a telephone as the freeband.

I don't know if that's true, Steve.

The Technician license, which grants ALL US amateur operating privileges above 30 MHz, has not had a code test for more than a decade, And the written test for it is not very difficult. Yet LHA has never gotten one. The other classes of US amateur license now require only a 5 wpm code test, and for more than a decade it has been possible to get a medical waiver for all higher code test speeds. LHA wrote on January 19, 2000, that he was going for Extra "right out of the box" but has not done so yet. If LHA wanted to have a ham license and a ham station, I think he would have gotten both a long time ago.

All I know about Mr. Anderson is his postings here on rrap. He never posts anywhere else, does not write for any current publication I know of, and of course is not on the ham bands. HE might be a very nice guy away from rrap - who knows?
>

Actually, I never recall him saying that he should get a license without the
test.

>Sitting for the exam would validate his
>mortality,
>and he can't stand that.

What I recall is that he has no regard for the license as any sort of
accomplishment. Also no regard for most things hams consider as accomplishments
in radio, such as code speed, homebrewing equipment, working contests or DX,
passing traffic, etc.
>

>insufferable creep.

Maybe. Or maybe his aim is to try to bring out the worst in those who disagree
with him. Notice that he never says what his goal really is (other than ending
the code test) and never gives any sort of coherent vision of where ham radio
should go, other than "no code test, one class of license, no kids under 14".

Fascinating.

Doing something equally futile, I suppose. Cecil would argue with a fence post
just to hear his head rattle.

If he defines "lie" as "a false statement" with no qualifiers, then he's going
to stick with that as long as anyone disputes it.

Sure. So do the drug dealers. For what it is worth, I knew a kid some 15 years ago who was selling drugs. I told him I wasn't the police, but he should think carefully before selling more. He had made a ton of money. Had he gotten smart, he would have had a big head start in life (and I do NOT recommend this to get that start in life); but no, he was greedy. He kept selling drugs until he got busted IN THE COMPANY PARKING LOT where he worked. He sold 20 pounds of marijuana to an undercover cop. Cool. He was engaged to be married; unfortunately, he became engaged to jail. Most of the time was served as in-house-arrest (with the ankle device attached). He lost his job. He lost his girl. He lost his car and house. He is a convicted felon. He can never own any gun (and he loved hunting). I do not condemn the occasional 'experimenter', but if you wish to continue, be my guest. The FCC started fairly recently at ground zero - no enforcement. It is slowly ramping up. Don't expect any more sympathy from me if you get whacked than the guy who lost everything with his drug conviction.

Hans, the problem here is that all the "experts" in that article are just giving their personal opinions without any reference to actual facts. In fact, some of your quotes contain no source at all. Read on and I'll point out what I mean when we come to it.

> "The anthrax spores that contaminated
> the air in Senate Majority Leader
> Thomas A. Daschle's office had been
> treated with a chemical additive so
> sophisticated that only three nations
> are thought to have been capable of
> making it."

No source given for this statement. However, based on a study for the CDC, "Bioterrorism as a Public Health Threat," by Johns Hopkins University, "the number of countries engaged in biological weapons experimentation has grown from 4 in the 1960s to 11 in the 1990s.* Recipes for making biological weapons are now available on the Internet, and even groups with modest finances and basic training in biology and engineering could develop, should they wish, an effective weapon at little cost. What of anthrax, which has been so enthusiastically embraced by both Iraq and the Aum Shinrikyo? The organism is easy to produce in large quantity."

*Now 17 according to a study for the CDC by the American Medical Association.

> "The spores were treated with a

>
> "The finding strongly suggests that
> the anthrax spores in the U.S. mail
> attacks were not produced in a
> university or makeshift laboratory
> or simply gathered from natural sources."

No source given for these statement. However, according to experts involved in the DoD Anthrax Vaccine Immunization Program...

http://www.anthrax.osd.mil/HTML_interface/default.html

"...anthrax spores can be produced in large quantities using basic knowledge of biology. Spores can be stored for decades without losing potency. Spores can be easily spread in the air by missiles, rockets, artillery, aerial bombs & sprayers."

> "The presence of the high-grade additive
> was confirmed for the first time
> yesterday by a government source familiar
> with the ongoing studies, which are being
> conducted by scientists at the Army Medical
> Research Institute of Infectious Diseases
> at Fort Detrick in Frederick."

Notice that the source was not actually named. No details about the source was given other than he is "familiar with the ongoing studies." The word "familiar" is a loose term that can mean almost anything without details.

> "Four other experts in anthrax weapons said
> they had no doubt that such an additive was
> present based on the high dispersal rate
> from the letter to Daschle."

Notice that these four, unnamed, experts were offering personal opinion - "they had no doubt that such an additive was present based on the high dispersal rate." They were not confirming, based on their own lab studies, that the additive was present. They were simply basing their opinions on the dispersal rate - with no details as to if they themselves had determined that dispersal rate or were simply guessing based on what they saw on CNN.

> "The evidence is patent on its face," said
> Alan Zelicoff, a senior scientist at
> Sandia National Laboratories; Center for
> National Security and Arms Control.

The evidence of what is patent on its face? Is Alan Zelicoff one of the experts mentioned in the previous paragraph confirming that the additive was present? If so, again based on what - that it is patent on its face? Science is not based on what is "patent on its face." And neither is the law. And the same should be true for our National Defense.

> David Franz, formerly of USAMRIID and
> now at the Southern Research Institute
> in Birmingham, said, "In order for a
> formulation to do what the one in
> Daschle's office appears to have done -
> be easily airborne - it would require
> special treatment."

A single word means so much. Notice that he says "appears" to have done. Again, this is not fact, nor is it confirmation of anything.

Also note that he didn't specify what type of "special treatment" was required. Again, no confirmation of the story's premise.

> "That particle size, 1* to 3 microns in
> diameter," said Sen. Bill Frist (R-Tenn.),
> "is extremely small - a first requirement
> for making weapons grade anthrax spores
> for warfare or terrorism."

Senator Bill Frist, who obviously has little education in microbiology, has no idea of what he is talking about. According to the article "Anthrax as a Biological Weapon, by the Journal of the American Medical Association,...

http://jama.ama-assn.org/issues/v281n18/ffull/jst80027.html

"...Bacillus anthracis is an aerobic, gram-positive, spore-forming, nonmotile Bacillus species. The nonflagellated vegetative cell is large (1-8 ï¿½m in length, 1-1.5 ï¿½m in breadth). Spore size is approximately 1 ï¿½m. Spores grow readily on all ordinary laboratory media at 37ï¿½C."

In other words, there is absolutely nothing abnormal about an anthrax spore 1 to 3 microns in diameter - that (1 ï¿½m) is the normal size of an anthrax spore. Furthermore, the size is not the determining factor for weapons grade material anyway (even a first year student of microbiology would know that).

> From the above it should be clear, even
> in South Carolina, that we are dealing
> with a sophisticated attack on our
> homeland, not just some kook with a
> basement lab and a grudge.

Look, Hans, I'm not arguing either way. You may be perfectly right that some group is responsible for these mail incidents. All I'm saying is that we have no proof at this point, so it is absurd to start pointing fingers. Once we have that proof, then we'll all have someone to point at - the person(s) who really did it.

Whatever the case, the press should be ashamed of itself for producing articles like the one you quoted (based on innuendo, supposition, misdirection, misleading words, and non-experts quoted as experts). One wonders why this writer, and this publication, would resort to such sleazy tactics, knowing that it would only inflame the American people.

That's alright. With the way these messages fly around, it is easy to get one confused with the other. I find myself doing to same thing occasionally - responding to a message like I would to a message written by another. However, I have so far avoided mentioning a name in these incidents. ;-)

Because it has not been issued by the FCC. Check out a callsign search engine, Hans.

> You sure sound like Leonard H. Anderson

No, I simply check out the facts before running my mouth, just like you should have checked that callsign before jumping on me. To be a valid ham radio callsign, it would have to be issued to that person by the FCC. That callsign was not.

Heart attacks at 84 and 92? If only we could all be so lucky to live that old. My wife's father died at 48 (heart attack), after endlessly fussing at me for smoking. By the way, since you mentioned smoking, I should point out that Grandpa Fields, the one who died at 87, also smoked most of his life. Even worse, he made his living growing tobacco. My grandma, his wife, the one almost hitting a hundred, also smoked for a few years when she was younger.

Sorry to hear about his injury. I feel for him (about both the injury and the food). How can food be healthy if it makes a person miserable? How can a person recover well if they're miserable? Actually, I think it is a hospital conspiracy - they make the food terrible so people will have more incentive to leave - hence be reported as healed by the hospital. :-)

Hopefully your grandpa is at home where he can get something a little better occasionally. My grandpa did that once when he injured his leg in an accident. We were all amazed that he repeatedly volunteered to watch the kids whenever the parents went shopping or whatever (something that would normally drive him crazy). We finally figured out he was using the kids to raid the kitchen for him whenever the other adults were out of the house.

There are hundreds of agencies besides the FCC which
are authorized by their governments to issue amateur
radio call signs.

An example of such an agency is:

Radiocommunications Agency,
Wyndham House,
189 Marsh Wall
London E14 9SX
England, UK
Tel: 020 7211 0211

> Check out a callsign search engine, Hans.

I did exactly that, Dwight, and it returned the
following information:

G4ZOW MR P DE CADENET
22 BEECHING CLOSE HARPENDEN
HERTFORDSHIRE, AL5 4LZ
ENGLAND, U.K.

> > You sure sound like Leonard H. Anderson

It certainly appears on the surface that you did a half-vast job
of checking out the facts.

Good luck on this one now.

With all kind wishes,

de Hans, K0HB

It is highly improbable that the FCC will ever issue a G prefix considering
that it is assigned to Great Britain.

We had been using N and A before the allocations began at the 1927
conference and simply added a dah to them for W and K. We donated half of A
to get Pakistan a non-British prefix in 1947 and it has since been used for
India, Spain, Australia, Argentina, Tonga, Bhutan, Liberia, and a great
shitpot of emirates on the Arabian Peninsula depending on the second
character.

The Brits got dah-dah (M), dah-dah-dit (G), and dah-dah-di-dit(Z) and V. So Z calls are spread over the old empire plus Albania, Brazil, and Paraguay, and recently Macedonia. V calls are spread over hell's half acre as well with Canada and Australia being the best known amateur ones.

Incidentally, the same allocations are used for tail numbers on airplanes, hence the N number on US aircraft.

Before WW2, Germany and Japan had D and J in their totality just as we have W, K, and N. Germany got to donate to recently independent South Korea and the Phillipines while Japan got to donate to Jordan, Norway, Indonesia, and Mongolia. Serves them right for losing, what?

It should be in your trusty Handbook; it is certainly in mine.

So the rest of the world cannot issue valid amateur licenses? Or must they be sure they are in American databases??

I don't know. My wife went by MD's on her way home from school the other day and I could not find any meat in the refrigerator that looked like that slab of stuff between those buns. It had the texture of what I would imagine cheap tuna fish in a can (the mushy stuff) might have if fried (not the taste or smell - the texture). Beyond that, I could not relate the rest (taste or smell) to any known living or dead thing. So your guess is as good as mine. Care to speculate?

> And they don't use "a little salt"
> or "a little sugar" on anything.

A "little" is a relative thing, Jim. A whole can of salt is a little if you're standing next to a truck full of salt. I understand what you're trying to say though.

> > Okay, now we're getting into

I know. But there is still hope. My CC&R allows for small outdoor pets. Perhaps if I put a dog collar on the cows, and built a dog house to scale with "Spot" over the door, nobody would notice.

> Sorry, I got carried away.

You certainly did. :-)

> What I'm tryin' to tell ya is that

That may have been what you were trying to say, but you lost my interest not long after you started on poly-unsaturated fats.

> I bet your grandfolks ate stuff
> that wasn't nearly as processed or
> sugar laden as the stuff at
> fast-food joints.

You're right (getting serious for a moment). Each grandparent grew up eating natural foods, often grown on their own farms. Years ago, the meats were naturally stored (salted pork, canned vegetables, etc). Later each switched to freezing most everything, though each still canned vegetables and some of the meat is still stored naturally (taste preference). My oldest grandma doesn't do much of this herself anymore, but she has no problem getting this stuff from friends (other farmers). The rest of the grandparents still live on farms, and it is rare to find processed foods from a grocery store in their homes.

And I hope some of that genetics has made it's way to me. Most of my family is living to be a ripe old age, and are relatively healthy well into that old age. The ones who didn't make it didn't as result of accidents or whatever. So far, the genetics seems to be working. I rarely get the normal illnesses (colds, flu, or whatever). However, there is a down side. I have noticed that when I do get sick, it tends to hit me a lot harder than most. It's like I have a fairly strong defense to most germs, but the germs that do make it through that defense are especially strong themselves. Thankfully, that is relatively rare (only a few times in my life so far).

Apples to oranges again.

Drag racing depicts cars.

Throroughbreds are usually depicted as horses.

Nice try, though.

lol

So far, most of the hams doing the "shredding" can't figure out that I was talking about
mobile to mobile shootouts, and keep telling me about locations, etc.

So, why not take a stab at it Aaron? Because EVERY time you attempt it, I take you
down like the Red Baron?

Poor poor Aaron. Can't compete on a technical base, so he has to cheerlead while
some hams that can't comprehend normal English take up his fight for him.

It matters where it came from.

In a matter of a couple weeks, I can get a PHD from a diploma mill.

Does that classify me as an EE? Not likely.

People who blindly follow those who just have initials are morons.

Those who prove themselves technically will always win, in the end.

But the FCC doesn't issue ham licenses in the UK. Some equivalent
UK government agency does that there.

Sorry, I didn't notice the guy's UK email address. I simply went off of his comment that he met Toll in Tyler a few years ago, which suggested he was here in the US. And that callsign is not a valid callsign here. A simple mistake, which I again apologize for.

"Toll Free" (who will not give his name or ham call) doesn't let
"laws" stand in the way of doing what he wants, when he wants,
wherever he wants. Is that about right, Toll?

Holy Smoke, Dwight!

Do you really believe that FCC is the only organization on earth to
issue amateur callsigns? Are you familiar with the prefix blocks used
by Great Britain?

I can't understand how you managed to get both of those brograns in your
yap at the same time.

Not yet. They just got him moved to the VA Hospital, though, so at least he'll have more people to talk to. Not sure what the VA's policy is, but all the other places would let us bring him a burger or whatever, as long as it got listed on his intake sheet.

Hopefully, he'll be able to go home in a wheelchair within the next few months. Then we can find out what his psychological condition *really* is when he's not bored half out of his mind.

All of the above, and more, all at once, the "more" being propaganda.

Most people who have free access to information recognize the distinction between lies, misinformation and propaganda. Without your references to any dictionary definition. And it should be noted that definitions in dictionaries change to adapt to common usage. All except yours, of course.

Of course it's a valid callsign here.

Taking advantage of the CEPT agreement (and before that reciprocal operating agreements) G4ZOW could operate freely in the US, with the full blessing of the FCC.

And here I thought you'd "checked the facts" before you spoke, chiding me for not having done so. Tsk, tsk!

With all kind wishes,

> California for one.

I had a license there about 20 years ago, but the laws may have changed since then. Do you have a link?

Now, since you claimed that speeding is a felony, but gave only one example but which had extreme conditions, can you give an example where speeding at any speed is a felony?

The point is, Toll, that if you want to compare the crime you need to compare the punishment as well. And the punishment for speeding is a drop in the bucket compared to illegal CB operation.

Where? I've seen no evidence that the Taliban government, which we're now bombing, caused the WTC attack. As far as I know, the only "sin" they did was to refuse to turn over a citizen of their own country to us. And I've seen no evidence that the young men of their military, which we're now killing, caused the WTC attack. As far as I know, they've done absolutely nothing to us. I'm not trying to defend the Taliban - I'm simply hoping you can provide some facts that I'm not aware of which would dispute the above.

I never developed much of a taste for Italian food (even while there). Now, Bratwurst or Schnitzel (spelling?) will definitely get my attention. But, beyond that, I tend to like basic foods - simple meat recipes, veggies, potatoes, pasta, plain breads, etc. If I have to kill the flavor of something with heavy spices, I probably should not be eating it.

Why only look for places that once were one of those. A restaurant that is also a topless bar and laundromat would even be better. Kill three birds (a meal, entertainment, and some light housekeeping) with one stone. On second thought, too many spices would probably spoil the broth. No way a place is going to get all three of those right, so stick to the dedicated establishment (you're lucky enough just to find a place that can do one of those alone right).

Keep an eye on him at that VA hospital. Most are pretty good, but some VA hospitals tend to get a little sloppy or lazy at times.

LOL. I'd like to say I understand what he is going through, but I cannot even imagine being laid up for months. Like him, I suspect it would drive me right out of my mind. Nurses are not paid enough to deal with that.

Maybe you missed the part in one of President Bush's speeches in which he said that there would be no distinction between the terrorists and the governments that harbor them.

The point is that the Taliban may *truly* believe that we, the infidels,
are engaging in acts of terrorism in Afghanistan. By your definition,
then, it wouldn't be a "lie". By my definition, it is a lie and IMO it
obviously is a lie. So do you think the Taliban is merely "mistaken"?

Interesting factoid:

G4ZOW is on Buckmaster, but not on QRZ or WM7D databases. ARRL and FCC are US only.

So depending on where one looks, it could appear to be valid or invalid.

AMATEUR RADIO NEWSLINE(tm) REPORT #1263 - OCT. 26, 2001

Amateur Radio Newsline report number 1263 with a release date of
Friday, October 26th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The ARRL says to get ready to fight to protect the 70 centimeter band and the FCC says to stop sending paper to its Washington office. These stories are first on Amateur Radio Newsline report number 1263 coming your way right now.

(Billboard Cart Here)

**

FORCED SPECTRUM SHARING: BATTLE LOOMS OVER PART 15 ACCESS TO 425-435 MHZ

The American Radio Relay League says that a battle is looming with the FCC over the agency’s proposes changes to its Part 15 rules governing unlicensed devices. Changes that would allow operation of advanced radio frequency identification devices between 425 and 435 MHz. And it could spell the word trouble for ham radio as we hear from our South-East Bureau Chief, David Black, KB4KCH.

--
The ARRL Letter explains the League's position. The FCC has decided to grant a request made earlier this year by SAVI Technology Inc. SAVI wants to us the spectrum for radio frequency package identification tags. To help make that happen, the FCC is issuing a Notice of Proposed Rule Making.

In comments on the VHF Reflector, Russ Pillsbury, K2TXB, discusses SAVI. He describes it as a big, multi-national company with significant worldwide funding. Pillsbury also says SAVI has large United States defense department contracts as well.

SAVI Technology sells radiolocation and wireless inventory control products. SAVI says it needs the rules change to meet customer demand for increased radio frequency identification system capabilities. And the FCC says it agrees with SAVI. The Commission says changes
to its Part 15 rules would allow more advanced radio frequency ID systems on the 433 MHz band and would serve the public interest.

The Commission proposes creating a new section to Part 15. It would allow operating radio frequency ID systems between 425 and 435 MHz. Transmissions could be up to two minutes at a time. Maximum field strengths would be at the level now permitted only for extremely short-duration, intermittent control signals. And that's what ham radio operators don't like. They see that as a high potential for interference to Amateur Radio operations nationwide. And

it's why the ARRL fiercely opposes the rules change.

The League takes a strong stand. The ARRL says the FCC has set the stage for another battle between amateur and commercial interests. League Executive Vice President Dave Sumner, K1ZZ, accuses the FCC of not having thought this one through. Sumner normally expresses ARRL Board policy. He says the Part 15 radio frequency identification proposal is: "contrary to the whole philosophy of the Part 15 rules."

Sumner says the radio identification devices SAVI proposes belong on other frequencies--specifically, those authorized for use by devices regulated by FCC Part 18 rules. Those regulations cover Industrial, Scientific and Medical devices. The FCC counters, saying the proposed rules change dealing with the ID systems is to harmonize its own rules with those in other parts of the world.

But Sumner fires back. He says 433.9 MHz is allocated for Industrial, Scientific and Medical devices only in ten European countries but not in the rest of the world. And it is not permitted in North and South America which make up I-T-U Region 2.

From the South East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

Another portion of the proposed rules change involves the Industrial, Scientific and Medical frequency allocation at 13.56 MHz. Dave Sumner says at first glance that proposal might permit increased emissions in the bottom 10 kHz of the 20-meter amateur band. Sumner adds that the ARRL will take a closer look at this section of the overall proposal before assessing its interference potential. The entire Notice of Proposed Rule Making and Order is contained in ET Docket 01-278 is available on the FCC website at www.fcc.gov and the ARRL Website at www.arrl.org. (ARRL, K2TXB, VHF Reflector)

**

FORCED SPECTRUM SHARING: FCC ISSUES 430 MHZ EXPERIMENTAL LICENSE FOR SOCAL

Hams in Southern California are on alert after the FCC issues an Experimental License to Digital Wireless Corporation in Los Angeles to test its systems in the 420 to 430 MHz Amateur Radio band. Digital Wireless Corporation is a manufacturer of secure, all-digital, Internet-linked trunked and non-trunked dispatch radio equipment that provides secure conversations and seamless network coverage for business, government and military users. The license with the call sign W-C-2-X-K-K permits holder Brent Jaybush and Digital wireless to operate within 5 km of their factory in Los Angeles through February 01, 2003. (FCC, ARNewsline(tm))

**
FORCED SPECTRUM SHARING: ARRL - NO COMMERCIAL USERS AT 2390-2400 MHz.

The ARRL says that it urges the FCC -- ‘in the strongest possible terms' -- to make no commercial allocations in the 2390 to 2400 MHz primary Amateur Radio

Service allocation. In a bulletin to its members released on Wednesday, October 24th the League did however tentatively suggest hams might be willing to share the band with compatible government services that are displaced to make room for advanced wireless systems.

In its communication to the regulatory agency, the ARRL tells the FCC that advanced wireless systems are fundamentally incompatible with continued amateur access to the band.' The ARRL says the federal government 'has historically been a compatible sharing partner and that government uses would offer 'the least disruptive opportunities for sharing' in the band. (ARRL Bulletin)

**

RESTRUCTURING: NEW LICENSING REGS IN NEW ZEALAND

It’s a nation that now only has two license classes and a 5 word per minute code test. This as New Zealand joins the worldwide move toward simplifying the entry to ham radio. Amateur Radio Newsline’s Jim Meachen ZL2BHF has more:

--

The introduction of New Zealand’s Radiocommunications Regulations 2001 has brought changes for Amateur Radio Licensing in New Zealand. Forthwith there are only two classes of Amateur Radio Licence available -- The Limited and The General. The Novice and the Novice/Limited licences grades have been removed.

The Limited licensing procedure remains unchanged and the General licensing procedure is changed by the lowering of the Morse Code test to 5 words-per-minute. Novice and Novice/Limited licences will no longer be granted. Existing licences in these categories will remain valid under the new Regulations and with their original licence provisions.

New Zealand’s Licensing Authority the Ministry of Economic Development is encouraging existing Novice and Novice/Limited licensees to review their qualifications to see if they now meet the requirements of the new General Licence.

Amateur who have passed the previous Novice Morse test of 6 wpm and attained a pass of 50% or more in the theory and regulations examination, or 66% or more in the new multiple-choice computer-generated examination now meet the requirement for a General Licence and can immediately submit an application for an upgrade.

The existing ZL callsign grouping that indicates the class of licence of the holder will remain in force. This will require all licensees upgrading to a General licence to obtain a new callsign.

Included in the new Regulations is a long awaited provision for variation to the manner in which an amateur examination is carried out if there is need to vary the examination process for a candidate with a particular disability. Variation will be at the Chief Executive's discretion and the Ministry will deal with each case as it arises.

It is expected that the New Zealand Association of Radio Transmitter Morse Examiners will test at 12 wpm on request for those who may wish to meet this higher operating standard for overseas travel.

From Auckland New Zealand I'm Jim Meachen ZL2BHF for Newsline.

--

With more and more nations turning to 5 words per minute Morse testing, it appears as if it will soon be the standard -- worldwide. (NZART, ZL2BHF)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Las Vegas Amateur Radio Club net serving Las Vegas Nevada.

(5 sec pause here)

**

RADIO AND THE WAR: FCC STOPS ACCEPTING FILINGS IN ENVELOPES

If you are planning to write to the FCC in Washinton D-C – the word is – don't. This as the agency issues a public notice saying that filings enclosed in envelopes will not be accepted until further notice.

The reason is the same as the one CQ Magazine stated last week when it said it will no longer accept mailed in paper logs – the possibility of bio contamination. And while the FCC notice makes no direct reference to the anthrax scare, the Broadcasting and Cable newsletter says most view it at as a precautionary.

In a nutshell, heres what the FCC says to do. Document filers and messengers delivering paper communications to the agency will be asked to dispose of envelopes in a receptacle outside of its Washington, D.C., headquarters. Mail and packages delivered to the agency will be opened at an off-site location. If you must send a paper filing to the FCC, the only way it can be done is by clipping the papers together with a rubber band or other fastener with no envelope. Then you either hand carry it or courier it to 9300 East Hampton Drive, in Capitol Heights, Maryland. Those requesting confidential treatment of their documents must have materials placed in commission-provided envelopes. The FCC also says that filers have the option of submitting any document electronically.

And what about filings by U-S Mail to the Gettysburg Licensing facility in Pennslvania? Items like ham radio license renewals and the like? According to the ARRL Letter, the public notice on FCC mail makes no mention of any change in procedures regarding filings in envelopes to Gettysburg, but that could change at any time. (Broadcasting & Cable, ARRL)

RADIO AND THE WAR: RADIO SOLO HEARD IN THE USA

Last week we reported that the United States has been air dropping Bay Gen wind up radios into Afghanistan. We also said that the government six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. Now we can give you an idea of what the airborn transmission to the Afghan populations sounds like. Take a listen:

--
Audio here
--

That signal was reportedly recorded by a shortwave listener on the U-S East coast on October 18th and posted to the Internet. And while we do not know exactly what's being said, an English translation posted to the Pentagon's website indicates its probably a transmission to Taliban fighters and might well say: "When you decide to surrender, approach United States forces with your hands in the air. Sling your weapon across your back muzzle towards the ground. Remove your magazine and expel any rounds. Doing this is your only chance of survival." (shortwave.com, ARNewsline(tm))

**

RADIO AND THE WAR: A RUN ON RADIOS

One of the hottest selling consumer electronic items since September 11th is the scanner radio. According to several news reports, the people buying them say that it gives them a sense of security knowing what's taking place in the community in light of the terror attacks on New York City and the Pentagon.

One story says that the Radio Shack chain, based in Fort Worth, Texas, has reported a major increase in sales. The same with such dealers as Scanner World USA, a mail-order business based in Albany, N.Y., and Uniden America Corp. of Fort Worth. In fact, some retailers report sales are up 10 percent to 30 percent compared with the same period last year.

That article quotes Norm Schrein, KA8PGJ, who is president of the Bearcat Radio Club in Dayton, Ohio. Schrein says he went to a trade show in Peoria, Illinois, four days after the attack. Business was so brisk that his stock of scanners was all but cleaned out.

But scanners are not the only hot product running off dealer shelves these days. All-band shortwave radios are running a close second. According to one news story the lure of shortwave receivers is that they allow for listening to broadcasts from around the world, including airline, shipping and military communications. Other reports say that shortwave gives the public yet another avenue to get news items not regularly reported by the U-S press. (Various published news reports)

ENFORCEMENT: DON'T USE ILLEGAL GEAR FOR BUSINESS

A Kentucky towing company is told to stop using the ham bands to communicate. This after the FCC receives complaints that the company's trucks have been heard on 10 meters. Riley Hollingsworth, is the FCC's Special Counsel for Amateur Radio enforcement matters:

--
Hollingsworth: “We sent a warning notice to STI Towing and Repair in Walton and Florence Kentucky about using 10 meter Amateur equipment in their business operation. Related to that, we sent a warning to an employee licensee of the company [named] Robert McCoy, N4ZTA of Florence Kentucky about the same matter.

Now that employee may have equipped the trucks wth unlicensed equipment. The trucks are tow-trucks number 21, 27, 52, 97, 99 and RR4 operating in the Walton and Florence Kentucky areas.”
--
STI Towing and Repair was given the usual time to respond. (FCC, RAIN)

**
ARRL MEMBERS: THE LEAGUE NEEDS YOU IN THE CC&R EFFORT

If you are an ARRL member, listen up. This one is for you.

Have you ever been denied the ability to put up an antenna, or to operate an Amateur Radio transmitter? Have you had any other restriction on your Amateur Radio activities because you live in a housing development or condominium complex governed by private land use regulations? Well, the ARRL Board of Directors has adopted a goal of trying for legislative action that helps overcome the unreasonable restrictions of C-C-and R’s that prohibit or restrict Amateur Radio antennas. And you can help. Heres how.

According to the ARRL Letter, the league has a sample letter at its website. That’s in cyberspace at www.arrl.org. If you are affected by a CC&R, or know someone in your Congressional district who is, please adapt the sample letter to your own situation and consider sending it to your member of Congress. And if you decide to write please send a copy to the ARRL's Office of Legislative Affairs.

To find your Senator's mailing address check www.senate.gov/contacting/index.cfm. To find your Representative's, check www.house.gov/writerep. (ARRL)

AWARDS: DARA OPENS NOMINATIONS FOR HAM OF THE YEAR

The Dayton Amateur Radio Association says its opening the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

The Radio Amateur of the Year is described as the special person who has made a long term commitment to the advancement of amateur radio. We are looking for a well-rounded individual who has contributed to our hobby in some outstanding way. The Technical Excellence award is for the person who has made an outstanding technical advancement in the field of amateur radio while the Special Achievement Award is reserved for the ham who has made an outstanding contribution to the advancement of amateur radio. This latter award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org. (DARA)

**

NAMES IN THE NEWS: HAP HOLLY KC9RP TO SPEAK IN L.A.

If you live in the Los Angeles area, and have never had the opportunity to meet RAIN Producer Hap Holly, KC9RP, you will have you chance very soon. This as Hap and his wife Stephanie venture west to the City of Angeles for a speaking engagement by KC9RP.

Hap will be the guest of the TRW Amateur Radio Club at its Thanksgiving Awards Banquet the evening of November 10th. There is one caveat. This event is for active TRW Radio Club members and their guests only. More information is on the web at www.w6trw.com under the subject Annual Banquet. (ARNewsline(tm))

**

NAMES IN THE NEWS: W4WYR NAMED A “CHAMP”

The ARRL Letter says that Southeastern Division Vice Director Evelyn Gauzens, W4WYR, is the recipient of the 2001 Citizens' Ham Mobile-Marine Patrol or CHAMP Award. Gauzens was selected for her work as co-founder of the famed Miami Tropical Hamboree ham radio convention and as being a prominent community activist. The South Florida FM Association, Citizens' Crime Watch, and the Miami-Dade Police Department established Citizens' Ham Mobile-Marine Patrol in 1994. (ARRL)

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: HIGH SPEED INTERNET CONNECTIONS GROWING

It won't ever replace ham radio for versatility, but high-speed lines connecting people to the Internet increased by 63% during the second half of year 2000 That’s a total of 7.1 million new connections. Of the 7.1 million high-speed lines, 5.2 million were residential and small business subscribers. The CGC Communicator says that the rate of high-speed growth for the full year of 2000 was 158%. (CGC Communicator)

**

ON THE AIR: CULBERTSON A HIT AT JOTA 2001

Astronaut Frank Culbertson left a global trail of excited Scouts the weekend of October 20 th as he made rapid-fire QSO's during the worldwide Jamboree-on-the-Air. The commander of the Expedition Three crew on board the International Space Station used the NA1SS call sign to rack up contacts in many places including Australia. There on Saturday, the 20th, Tony Hutcheson, VK5ZAI, took a portable station to the Riverland Scout Hall where a crowd of about 60 watched as one of the senior Girl Scouts asked Culbertson a question. Back here in the United States, sixteen Boy Scouts from Troop 48 in New Orleans gathered at the station of K5CFW, to pull off a quick QSO.

On the early afternoon pass over the U-S, KD4SFF, using the phonetics "Scouting for Fun," set up a station in his backyard in Greenville, South Carolina. He had five Scouts from Boy Scout Troop 555 over. Frank told one of them that he had grown up in South Carolina, and that he, too, had been a Scout.

Culbertson has been very active on the 2 meter band from the ISS. He talks to several schools each week as well as numerous open QSO’s worldwide. (AMSAT)

**

HAM RADIO IN SPACE: NEW STATION AT UK NATIONAL SPACE CENTER

A new Amateur Radio Satellite Service ground station has been opened at the United Kingdom’s National Space Center in Leicester. Using the call sign GB2NSC the station will operate at the heart of the center in the 'Space Now' attractions area, That’s the same location where the National Space Center Amateur Radio Society is demonstrating how to contact amateur radio equipment on board the International Space Station. (GB2RS)

**

SCIENCE AND SPACE: NASA’S GOLDIN ANNOUNCES RETIREMENT

Daniel Goldin, who pushed NASA to be leaner and faster and then came under fire for it, says he will retire from the space agency next month. after nearly 10 years in the job. The longest-serving administrator of the National Aeronautics and Space Administration Goldin will leave in mid-November with a record of 160 successful space missions international space station that is now permanently occupied. Cost over-runs in the billions of dollars are said to have contributed to his leaving the agency. (Published news reports)

**

INTERNATIONAL: WINLINK ILLEGAL TO OPERATE IN VK

It appears that the very popular WINLINK messaging system is illegal to use in Australia. WINLINK is a program and intertie network that provides full-featured digital E-mail transfer, position reporting and weather service to the global amateur radio community where Internet access is not available. But as Q-News Graham Kemp VK4BB, tells us, the Australian Communications Agency says – “no!”

--

In news services this week we see the WIA's Federal Technical Advisory Committee Chairman John Martin VK3KWA reminding operators it's "just not on" to operate this program "down under". John has had discussion with the ACA on the topic, it's not a simple matter of changing the amateur regulations, rather the issue is tied in with legislation including the Telecommunications Act.

John concludes that in the short term there is no chance whatsoever of any change in the ACA's ruling that Winlink is illegal in Australia. Packet radio bulletin board operators should also be very careful about forwarding any Winlink traffic, and preferably filter it for manual checking before allowing it to go through.

--

Currently there are WINLINK nodes in the United States and nations worldwide. The one major exception is Australia. For the rest of the world where it is legal, more information is on the web at www.winlink.org. (Q-News)

**

ON THE AIR: LONG PATH FRIENDSHIP NET.

In this time of turmoil a group of hams from around the world are going to try to bring some light to the end of a rather dark tunnel. This with a new on-the-air fellowship gathering called the Long Path Friendship Net.

The net will start at 1430 UTC, Sundays on 14.165 MHz with K6HAE and WTZ in California and ZS6AN in South Africa as control stations. The founders say that this is a big planet and there are enough natural disasters to be dealt with as well as some sad man-made ones for which the proficient and friendly radio operator is a valued contributor.

Again, that’s the new Long Path Friendship Net every Sunday at 1430 UTC on 14.165 MHz in the Extra segment of the 20 meter band. (Press release)

**

DX

In DX, the ARRL’s DXCC Desk reports that the ZK1NDK North Cook Island operation now good for DXCC credit. Hams who submitted request for ZK1NDK and were denied credit may contact the Leagues DXCC desk and have their records updated without having to resubmit cards. (OPDX, Daily DX, others)

**

THAT FINAL ITEM: REAL SKY HOOKS

And finally this week, you may find this one hard to believe, but its true. It comes under the heading of an honest to goodness sky hook -- and no we are not kidding. Bill Pasternak, WA6ITF, has more:

--

The proposal for these sky hooks comes from ATG industries in southern England. It wants to build reflective airships and have them operate at a height of

65,000 feet.

These craft would be unmanned and would station keep using solar powered electric engines and a lightweight diesel engine. ATG claims that these "skyhook" ships could keep position for up to 5 years. That they could act as a transponders for services such mobile telephones, broadband internet and digital radio.

ATG estimates that nineteen of these sky hook ships could cover most of the U.K. and replace as many as 4000 mobile telephone poles and up to 10,000 towers that are expected to be needed for the new G-3 technology.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

Its not known how long these sky hook ships will take to develop or if they will ever be deployed. (Telecom Daily)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at
www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, this advisory. The Amateur Radio Newsline Incorporated is not soliciting for affinity credit cards in our name or that of the old Westlink Radio Network. Nor are we telemarketing amateurs to sign up for any affinity credit card.

If someone calls you trying to get you to sign up for a credit card supposely sponsored by the Amateur Radio Newsline, get all the information you can including the full name of the telemarketing representative, information on sponsoring organization and the bank issuing the card. Then say no, hang up and drop us an e-mail with the details. We will take it from there.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Roy Neal, K6DUE, saying God Bless America, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

Ugh.

Sounds like they take whatever beef they can get, mince it to powder
and mack it out in patties with various binders and other mystery
ingredients. Kinda like the way they make particle board from sawdust.
Same flavor, too.

I'm no authority on burgers (that and steaks is W3RV's expertise). I
do know about meatballs, though. Really good ones start with a mix of
pork, beef and veal, and include stuff like yellow cornmeal and
parsley. Yum.

> > And they don't use "a little salt"

> A "little" is a relative thing, Jim. A whole can of salt is a little
> if you're standing next to a truck full of salt. I understand what
> you're trying to say though.

They use salt and sugar in an attempt to disguise the fact that
there's no flavor to begin with.

I understand many fast-food french fries are molded from potato
powder. Yuck.
>

Sorry. Main thing is that "low fat" stuff is often full of sugar, has
no fewer calories and is often worse for ya than the real thing.
>

> rare to find processed foods from a grocery store in their homes.

Which explains a LOT about both taste and longevity.

Fun fact:

Couple years ago, some folks developed methods of running diesel
engines on cooking oils. They'd get worn-out cooking oil from diners
and restaurants, filter it and process it, and wind up with a fuel
that was as good or better than #2 diesel, at a lower price (if ya get
the raw used oil for free). Works great (search Yahoo! on
"biodiesel"). But they can't use the stuff from MDs and some other

chains because it has so many additives and other gunk that it gums up
the engines' injection systems. Yet they expect us to eat that stuff.

Having had a ha-ha at Dwight's expense -- fair first because anyone as
typing-active as he is going to do that now and again and second because I
have done it as well -- it does show that lack of HF experience has an
effect. A G call lites up and says Brit real quick to anyone on the air for
more than 29 minutes. Greatest geography lesson a youngster can have.

Methinks you didn't understand the argument. Webster's defines "lie"
as a false statement so it is entirely proper for me to use that
definition for statements that *I* make. You do not get to choose
the definitions used for *my* statements. You only get to choose
the definitions used for *your* statements. If you use a different
definition from mine, you are expected to define that context change.

If I say I've designed a bus that operates at the speed of light
seems you would argue that a bus cannot even travel at the speed
of sound. Cute, but a violation of the rules of English.

It ain't a free country any more, Dick. Unless you call the USA Patriot Act your definition of free. I am at least taking the time to read it, read the USC that it references and amends, and it stinks to high heaven so far.

A lot of it is addressed here:

Read here:
http://www.eff.org/Privacy/Surveillance/Terrorism_militias/20011025_hr3162_usa_patriot_bill.html
(this is the Electronic Freedom Frontier's website, and they are probably not unbiased at all) :) However, it's the first spot I came across with the Act.

And here: http://uscode.house.gov/title_18.htm (this is the US HOUSE of REP site). You'll have to do your own homework--because there's lots of other Acts and Titles that are amended; I've been taking a look at all that I can.

Not that it matters--ain't no one's gonna change a damned thing about it.

Steve, did someone just happen to make you the judge of that? (the nuking part--and letting God sort it out). You take on the first part of the sorting it all out to make such a statement. Rather godlike of you, don't you think?

Just had to debate that.

Remember that propaganda doesn't necessarily imply a lie. The United States uses propaganda with every pamphlet and drop of US Aid to the Afghans--and they've done it many, many times before (I think they "taught" the rest of the world to do it, actually). You aren't saying they are lying, are you?!

I don't care what Bush has said. There is a distinction between those two in the law, both international and our laws. A person who harbors a criminal is not guilty of the same crime as the criminal. In fact, a number of governments around the world (Canada, Mexico, UK, etc) have refused to turn over criminals to us without conditions (the death penalty, for example), but I have yet to see us attack any one of those countries.

If Osama Bin Laden was involved in the WTC attack, then I very much want him too. He should be tried, convicted, and I'll gladly volunteer to throw the switch on the electric chair. But, to me, it doesn't seem like we're even going after Osama Bin Laden. All I see is an attempt by this government to overthrow the government of Afghanistan, using the WTC attack as an excuse to do this. And if that is all we're doing, then our attacks on Afghanistan are dead wrong.

But Osama bin Laden's "forces" have not been charged with a crime in this country, and neither have the forces of the Taliban. We don't kill the employees of Burger King because a supervisor there committed a crime. If Osama bin Laden was behind the WTC attack, the by all means go after Osama bin Laden. If we have to kill some of his "forces" to get to him, then I have no real problem with that. But it is not acceptable to overthrow the government of an entire country to get one man, or even a number of men who might have helped him with this crime.

Good grief, Dave. It was a mistake. It happens. It was late. I was in a rush to finish all the messages I was trying to respond to that night. I saw an unfamiliar callsign and, without thinking, quickly checked it out. In my rush, I didn't notice the UK in his address, nor did the callsign register in my mind as a UK callsign (mainly because I was focused on the US because of the town mentioned in the message). But, I realize none of that is a real excuse, so I acknowledged the mistake and apologized for it (to the thread and to the individual). And I apologize again here. It was a mistake and I'm sorry for that.

Now, that is all I can do about this. If you want blood, then you'll have to pay for the UPS shipping. :-)

Now if you want to talk about meatballs, you'll have to see my wife. Anything that is at all related, even vaguely, to spaghetti is right on the top of her food list. Spaghetti with meatballs. Spaghetti without meatballs. Just plain spaghetti. Just plain meatballs. It's all good to her.

> I understand many fast-food

And you can tell it. The fries now are nothing but powered mashed potatoes molded into shape. I'm sure it thrills many of those old Army mess sergeants who served powered foods all the time.

> Think about Vietnamese potbelly
> pigs. Pets you can eat.

Do you know how noisy those things are? That reminds me of the time I was staying in a small town in Germany. Every night I heard pigs squealing at the top of their lungs, but could never figure out where the noise was coming from. I looked around during the daytime and could not see a sign of any pigs anywhere. And I never heard them during the daytime (probably too much traffic noise, etc). Anyway, I was up late one night, heard them, and decided I was going to walk around town to find where the noise was coming from. Anyway, as it turns out, a house down the street had about two dozen pigs in the basement of the house. The basement windows were cracked open and a small light on. And judging from the odor coming from those windows, I would not want to be in that house for any length of time. I guess that does prove there is a way to have farm animals, even in the middle of town.

Hey, just be glad they haven't yet tried to serve us diesel fuels at
fast food restaurants. Of course, that is not to say it isn't coming.
All that is probably stopping them is the cost of diesel fuel.

> Reminds me - I gotta get a flu shot.

Never had one in my entire life (well, the Army probably gave me one
years ago). And the only time I've caught the flu was when we came
back from Germany. After ten years overseas, we had little resistance
to the local strains here and one hit us hard about two months after
getting back. We were sick for days. But, I'm getting older, so I'm
watching to see if that is going to have an effect. If I start picking
up these things easier, then I'll be getting those shots also (I'm not crazy).

I made enough working for three months at the Sinclair refinery to
pay my way the other nine months to Texas A&M. Tuition was $25 a
semester. The semester I carried 25 hours, my tuition was one dollar
per credit hour. Used books were about $4 and gasoline was 25 cents
a gallon. Hamburgers ranged from 19 cents to 45 cents for a double-
meat, double-cheese Whataburger.

It could be argued that we helped overthrow Nazi Germany in order
to get one man. It appears to me that the US has decided that the
Taliban is not a legitimate government and is not appreciably
different from a gang of terrorists occupying a certain land area.

Different era. Plus I went for four years and you went for five. The student loan I had to pay off back then was at an interest rate of 3 %, and I had ten years to pay it off. This was back when you could tax-deduct all interest, too. It woulda been stupid of me to pay hard-earned student cash when I could get such low interest long term loans, and pay them off with graduate engineer dollars. Plus if ya look up the inflation rate for the ten years following May, 1976, the deal gets even sweeter.

>>
>Yeah, I know. Drexel went thru a period when they went slack on
>admissions requirements, you got lucky.

Yeah, right. The place is an education factory, nothing less.

Guess it wouldn't be cool of me to mention that of the 15 courses I took to get the MSEE, I got one B and all the rest As.

>> You want fries with that?

>No freaking way! There ain't a purchased french fry out there these
>days that isn't a high point within the chemical engineering

>profession. "Better Living Through Chemistry". As if. There oughta be
>a law . .

There's an outfit that shows up at the Philly Folk Festival and other events that does 'em half-decent. They have a gizmo that looks like a manual can crusher, only with a gridwork of knifeblades at the bottom. Put in a whole potato, push the lever, raw fries out the bottom. You watch them being made - never more than a few minutes old. Only problem is the line is so long.
>>
>One of these damned days I'm gonna do the classic KP drill and peel
>ten pounds of mil-spec spuds and french fry 'em RIGHT like Mom did and

The precedents are the same as those for piracy. It is the duty of a sovereign government to stop piracy, deliver fugitives, and control its territory. When a government cannot or will not exercise sovereignty it is fair game to do it for them. We did it to Libya in the Jefferson administration, probably because we lacked the hard currency to pay them off but WTH.

Of course by the same logic the Brits would have every right to bomb the Federal Courthouse in Boston after allowing the IRA to wander around loose in the USA.

So anyway it's 1983 and I'm working for a food packaging outfit in
Trevose and I'm in South Chicago on a troubleshooting mission. The
customer's plant made all the various sauces McDonald's uses and was
having trouble with our packages, our aluminized film package seals
were leaking and I got told to go fix the problem.
>
>
Back then McDonald's had a menu item called "McRibs" which I don't
think was sold here on the east coast. The problem was that the
barbeque sauce for the McRibs was eating our seals. The stuff is/was
made from ingredients which came outta 55 gallon drums and tank trucks
which get mixed in huge cauldrons. Some of those drums were from
places like Monsanto. One of the workers slid by and told me not to
get the stuff on my hands . . hookay . .
>
>
I used aluminum basters (the kitchen things with the rubber suction
bulbs) to dip into the vat and draw samples of the crap for testing.
One nite I accidentally left a couple basters half-submerged in the
goo when I went back to my motel for the evening. The next morning I
was back in the place and I pulled the two basters out of the stuff
and lo and behold all the aluminum which was below the surface had
been completely dissolved by the goo, not a trace of aluminum anywhere
in the goo.
>
>
The net result of that foray into food chemistry is that I haven't
been in a McDonald's since and I don't give a damn how much my

"That's easy to explain. As another poster a short time back said about Part 95 rules "I don't care", well you see what happens when that mind set gets applied in a different context. It is very apparent they,=20 the terrorists, didn't care about human life either,=20 including their own. "

Regarding the WTC attack on 9/11/01

>>>>>President's Office : 14 CQ 001 JOHN E-Mail address : cq001john@aol.com Fax : 33 (0)4 74 03 69 80 Sites : http://cqdxgroup.free.fr http://lota.free.fr
CQ CQ CQ::: CALLING ON ALL DXERS
Recently we gave birth to a DX Group of a new kind, born from the (very deep ! !) reflexions of a group of Dxer friends, whose first avocation is innovation and conviviality on the air, quality of the contacts and of their confirmation. Indeed some will answer us that there already is a plethora of DX Groups, so additionally to being a new Group we will try our best efforts to bring something new to our beloved hobby. But what can still be new on 11m, and after asking ourselves this question we came to the answer that all had not yet been done , the best example being the success encountered by the DR Group with their Castles activations..
Seeing the enthousiasm among our cousins radio hams for the Lighthouses activations, and also that this kind of activity had never outside some rare and particular initiatives been practized on 11m, we decided to introduce them to our band as well, there are lists of Lighthouses in many places and we adapted them to our needs. So far they encomprise over 7000 lights over 6 continents and we have still a long way to go to complete them, so there is ground for lots of activations still even as the propagation is in a diminishing cycle ! !
These listes are at the disposal of anyone who asks for them, we are not more owners than neither are we going to do these activations all on our own, and here You all will have Your role to play, be You independent Dxer, affiliated to a Group of whatever size, You even are all welcome to be part of our Group if You wish so, everyone can do such activations, we on our side are founding a QSL Bureau able to take charge of editing QSL cards and

replying to any activations, or the different Groups existing may also manage them by themselves, we sure do not wish to supplant the need for DX Groups ! !
Let us also think for a moment that Lighthouses have for centuries been guides for seamen, some of them are real pieces of architectural art and they need to be protected from destruction in some cases. Also the Lighthouses are most often on IOTAs and some even are inside rare divisions, so there will be enough to satisfy all amateurs of beautiful QSL cards or divisions chasers. So we do send an invitation to all the Radio operators in order to take part , and then we will have done something positive for 27Mhz in general.
Indeed anyone who would like to join us in this venture is most heartily welcome to do so, we are not an elitistic Group boasting of any exclusivity, quite the opposite, we would like to bring something to RADIO ! The adhesion is yearly renewable, costs 25 US$, 25 Euros or 150FF and will give You a CQ call, 20 QSL cards of Your choice, the use of our Po Box and the right to make or take part in Lighthouses activations, get personal QSL cards printed with the use of our LOTA logo. When our financial means will allow for it we will edit a booklet containing tons of info, lighthouses lists, IOTA lists and plenty other useful infos such as QSL Managers and groups addresses lists. The call is made, and the door is open to anyone with a good will ! ! ! We also stand at Your disposal for any complementary informations if needed, don't be shy to ask us Your questions ! !<<<<<

> Direct replacement in Marshall amps.

ARS as a company or as a series by another company does not exist on
Faradnet.

Do I sense someone with an antique (by electrolytic capacitor standards)
that is in need of some new filter caps???

As a practical matter:

1) you probably do not even need to remove the old one. A cap of equal or
higher value and rating is usually simply bridged across the old one and is
well out of sight. A bigger one might actually help your bass response. If
it blows fuses that is one thing but the buzz is easy.

2) Some of the early Marshall amps were pretty brute-force devices using one
of two variations on a 6L6 which most OTs on this group are very familiar
with: the EL34 which took the mechanical pounding but tended to get
electrically beaten up (sometimes to neat effects) and a 5881 which is the
industrial version and capable of any non-nuclear shock the klutziest roadie
could dish out.

3) If it is a real antique, install some solid-state diodes (cheap) around
the vacuum tube rectifier as well. Again, these hide underneath and you can
even arrange for the old tube to be a lit up do-nothing.

Be a little careful with this beast: they used a standby switch that can
leave charged caps and a few other unpleasantries about to ambush the
amateur repairman.

Might help if we knew what the problem is and what model, year etc we are
dealing with and any markings on the can like the capacitance and working
voltage.

Do not bridge the new filter cap across the old one! Disconnect
the old electrolytic from the circuit. If the old one is bad you
haven't solved the problem. The old one can short out and just
might something else out with it like the power transformer.

The usual method is to cut the stud off the can and use that as the solder
point. Avoids making more of a mess than is really necessary. There are
lots of ways. You are correct but it was not a point I wished to make at
the time.

Yes. It's a term that some CB operators like to use to make themselves
feel good about operating illegally.

What we need to do is incinerate a few million people in the countries I mentioned. Maybe then the rest will get the message. If we, for once, went berserk, this shit would stop.

Yeah, right. And if the employees of Burger King prevent the police from
arresting the supervisor because they want to see evidence, they get arrested
for obstructing justice.

Ummm....yummy stuff, Brian! Now we know where industry is getting rid of it's toxic waste lately - add a little ketchup, a couple of spices, and call it barbecue sauce. And I actually thought about having one of those McRibs once. Now I'm glad I decided to stick with the unknown stuff they call hamburgers (of course, that is probably what they do with the solid waste).

What is really bad is that you cannot escape this stuff anywhere. When I flew through Frankfurt Airport several years ago, I was looking forward to some real German food. Sadly, all of the German restaurants in the airport had been replaced with American fast food joints (McDonald's, Burger King, etc) since my last visit. I flew 2000 miles just to eat a Big Mac (and the darn thing was cold too). I was truly disappointed when I left that airport for the next leg of the trip.

That would really be stretching it. The people of Germany were heavily involved in the events of WWII. They were well aware of the war, most openly supported it, and most knew the possible consequences. And the soldiers themselves were more than willing participants in Germany's military activities outside their borders. In Afghanistan, on the other hand, I don't think most soldiers are even deeply aware there is anything outside their own little world. They're roaming around the mountains just trying to stay alive. Concepts like international affairs, international law, and so forth, are just not something that is that personal to them.

The point I'm trying to make, Krell, is that I seriously doubt most Afghan soldiers or civilians even understand why we're attacking them. Remember these people are living like people a hundred years ago did here. Most don't have anything more than a radio - a television with CNN news is not even a consideration for most Afghans. They're roaming around the mountains totally absorbed in their own little local conflicts, just trying to stay alive. Beyond rumors spread by word of mouth, they probably don't know a darn thing about any bombing of a building in the United States. And you can be darn sure they don't understand why we have blamed them for it - and are killing them for it.

But you gotta hand it to McDonnell's, they are consistently bad
every where you go.

So you'd handle it all just like Bill Clinton - toss a few Cruise missiles into the empty desert and carry on like nothing more would ever be heard from the terrorists. Just because it happened to New York it won't ever impact you. Right, Dwight.
(I'm waiting with baited breath for his next round of BS where he changes his story and position yet again. Those who live on shifting sand never know a foundation).

So then because they're illiterate and uninformed, we should allow them to continue to recruit, train and provide even more terrorists to attack us, instead of hitting the snake at its head. You're a tactical genius, Dwight.

Sad to say but the post that started this thread is a forgery. If you really want to find more background then check out the "rec.radio.cb" news group. This is not the first time that myself, and several other Hams, have had messages posted using our callsigns and or names in an attempt to discredit our points of view in that group by a very persisted, and dirty handed, group of outlaw CB radio operators. The original post starting this thread is just one example of their tactics.

Actually, I think that is exactly why McDonald's (strange spelling) has been so successful over the years. While their food has never been great, it is predictable - which is not always the case with the non-fast food restaurant. With a regular restaurant, you're never quite sure what a hamburger is going to taste like until you try it (not a good thing if you're traveling through a strange city or only have a few minutes to eat lunch). But, with McDonald's, you always know what the burger is going to taste like, even if it is not going to taste that great.

So, in a way, JJ, you have written a good (or, at least, honest) advertising slogan for McDonald's - consistently bad everywhere you go.

Don't confuse a lack of interest with a lack of knowledge, Richard. Since my wife worked as a hospital dietitian for almost ten years, I have access to all the information I need about nutrition. And I have certainly not seen you come up with any striking revelations about international affairs lately. Have you been holding something back or is trying to belittle others all you have? Of course, you can always blame the latter on olive, canola and fish oils. :-)

> speeding at any speed is a felony?

No, because it isn't. I gave an example. Don't try to regulate it into
something
it isn't. Someone said it wasn't a felony. I provided one example where it
is.

My point is made.

>
> The point is, Toll, that if you want to compare the crime you need to

> drop in the bucket compared to illegal CB operation.

You believe that. I know for a fact that repetitive reckless drivings will
enable you to lose the priviledge of driving a car. You call that a drop in
the bucket? Depending on where you live, that can cost you your family,
your job, your home (can't make the house payment if you can't get to
work!), etc.

It can be screwed for you.

Just exactly who is this "they" and "them" you keep talking about?
Do you really believe the entire Afghan military is training
terrorists? Do you really believe the entire Afghan military attacked
the World Trade Center? You know, I hope the rest of the world does
not adopt the standard we're setting here. If everyone is going to
blame all for the actions of a few (just because they happen to come
from the same country), nobody in this world is ever going to get
along. And it doesn't take a tactical genius to figure that out, Richard.

Because it isn't required by law for me to do so on this forum.

When the FCC enacts legislation for me to correctly identify myself on the internet, I will. Until then, oh well for you Aaron.

doesn't let
> "laws" stand in the way of doing what he wants, when he wants,
> wherever he wants. Is that about right, Toll?

If I don't agree with them, no I don't.

Guess that puts me in the same boat as Geo. Washington, Tommy Jefferson, John Hancock and a few other notables, doesn't it? They didn't believe in the
laws, and rallied against them.

Of course, Abe Lincoln also chopped down a tree, and then told everyone he did. Guess some idiot could compare the two, as well.

Have a good one Aaron. Your getting farther and farther away from reality with
every post. Please go back and respond to the posts where you have been PROVEN wrong, but ran from, only to never post to again. We are ALL waiting!

A change in story is not what is needed here. What is needed is better reading comprehension on your part. Or if you can understand what I've written, then perhaps more honesty from you is what is needed. Show me where I said anything about tossing a few missiles into the desert? Likewise, show me where I ever said what happened in New York didn't impact me?

You know, I don't know what I have said or did to get you so angry at me, but your attempts to twist what I've said reflects far worse on you than it does me. I'm not embarrassed by anything I've written in these newsgroups. I may have been wrong (and I'm sure I have been many times), but I have never been dishonest.

Chemistry 101; aluminum is highly reactive, tomatoe juice is highly acidic.

Most people know not to use aluminum with tomatoe products; you would think a food packaging person would know better.

Kitchen experiment: take a piece of foil and put catsup, BBQ sauce, spaghetti sauce, anything with tomatoe in it, spots on the foil. Wait over night. Observe the nice holes.

You can blame McDonald's for cardboard food, but not basic chemistry.

That reminds me of our last rash attack on a country that supported terrorism. Remember our attack on Libya in response to the bombing of a disco in Berlin (the disco where American soldiers were killed)? In the end, when the evidence came together, it turned out that Libya had absolutely nothing at all to do with the incident (the Germans later arrested, and convicted, several Syrians for the bombing). Of course, the Libyans now hate us with a passion, but to most Americans they're just a bunch of crazy Arabs - not someone angry because their country was attacked without cause. When we rush to judgment, without waiting for the evidence, mistakes like this are sure to happen. And we very much rushed to judgment in this incident.

Well, ya sure trumped my biodiesel story. Explains why Ronald McD looks that way, too. No more Mickey D's for me!

But what was the fix for the seals?

If you're out this way, Nudy's is the place for breakfast or lunch. Hanne's in Havertown, on Darby Road just above Eagle, is pretty decent, too.

We all gotta help the diners survive.

"All great leaders since Moses have known that a feared enemy must be crushed completely. Sometimes they have learned this the hard way. If one ember is alight, no matter how dimly it smolders, a fire will eventually break out. More is lost through stopping halfway than through total annihilation. The enemy will recover and seek revenge. Crush him not only in body, but in spirit"
- Law 15 of the 48 Laws of Power.

This is where terrorists have made their mistake, and where we must not make ours.

Like I said in an earlier post: Sometimes the most restrained actions are the most dangerous. A strong message needs to be sent.

The only mistake with Libya is that we didn't drop enough of the right kinds of
bombs and turn the whole country into a parking lot.

The countries that support terrorism have shown that they don't care about a
peaceful, civilized solution to resolving differences. Since the inception of
Israel as a nation in 1948, the Middle East has shown a disdain for Western
culture. This is what Israel repressents. A wasteland that no one wanted was
turned into one of the most thriving and prosperous economies in the world, and
the rest of the Arab world can't stand it. Instead of embracing these values,
the rest of the Middle East has decided to make war against them. Some
countries are not as overt as others, but it is war nonetheless. A perfect
example of their attitude was when the Saudi Prince gave Mayor Guilliani a
check for $10 million and made comments about how we should re-evaluate our
Middle East policies.

One that simultaneously takes out the bulk of the threat of their weapons, which were described in limited detail in one of the intercepted e-mails between two of the Sept 11 terrorists that these resident peaceniks despise so well.

The tragis irony of all this is that Kimand Dwight get to experience the fruits of the labors of our military also, while selfrightously posturing.

Perhaps...but if you have followed the nature of terrorism in the last 30 years, after we whacked Libya, any silliness with Quadhafy's name on it stopped. Suddenly he wanted to "play nice". The PA103 episode was his last hurrah, and even that is not clarly his doings.

We need to get the business in Afghanistan over with and then move on...If it mean's hairlipping every Arab in the world, I could care less. Every car bomb, hijacking and terroristic event in the last 30 years has had an Arab face with it. OK. Time to teach thm how to play nice.

I believe "Islam" to be a peaceful and tolerant religion, but it is also subverted by some very sick and perverted minds. I could care less how someone prays or to whom/what they pray, but when they USE religion as an excuse to commit mayhem and murder, then it IS my business.

The previous author is right...we have known who/what/when/where for years. A lot of our reluctance to do what we NEED to do has been tied to trade agreements or worry about what's "PC" in world politics. We keep taking the Israeliis and the Palestinians to Camp David, but they keep making us look foolish.

We want to keep Israel happy because they are pro-western and spend a lot of money at Boeing, McDonnell Doulas and others..... We want to do the right thing by the Palestinians because they have some legitimate beefs and it keeps us in the good graces of those who supply our oil. I say nuke both of them and get this sandlot sparring crap out of the way. I am tired of both of them.

I am glad to see the President has taken the gloves off our intellignece and security agencies. Maybe when some of these bastards start disappearing in the middle of the night from thier own homes they'll leave ours alone.

And if that's not enough, then perhaps it >IS< time for the United States to start playing world cop. Better to live in a world where you ahve the right to remain silent than to live in a world where tyrants have the right to make you silent.

And that's my liberal opinion......

Steve

Your point has been made but not confirmed.

Reckless driving:
Although state laws vary, many states follow the Uniform Vehicle Code. It defines reckless driving as "willful or wanton disregard for the safety of persons or property."

In order to charge someone with reckless driving, the prosecutor must show that a driver did not care about the harm resulting from his or her driving, and that the driver should have realized such driving posed a hazard. When another person is killed as the result of reckless driving, the offending driver may be prosecuted for vehicular homicide, which is punishable by imprisonment and a fine.

This is total Bullshit Posted by Troll Free, check the Uniform Vehicle Code
for clarification. A criminal misdemeanor is not a felony.

TRAFFIC VIOLATIONS
Driving rules and violations are governed by state, county, and local laws
and ordinances. Routine infractions typically result in small fines (e.g.,
up to $50) and rarely count as points against a driver's record. However,
serious moving violations can be considered criminal misdemeanors and may
result in suspension or revocation of a driver's license under the laws of
many states. Monetary fines for reckless driving and other penalties may be
imposed, such as attending driving school/rehabilitation, jail time, or a
combination, for serious offenders.

No Sorry Troll Free, You are wrong, you must first know the correct use of the word felony. Check the Uniform Vehicle Code, the only time a traffic law is a felony is vehicular manslaughter.

Crimes are classified as either felonies or misdemeanors. Felonies are serious crimes (e.g., murder, rape, arson, armed robbery, tax evasion, possession of illegal drugs with the intent to sell or distribute, and forgery and larceny involving property valued in excess of a certain amount) that are punishable by incarceration in jail. Misdemeanors are less serious crimes (e.g., simple assault, disorderly conduct, disturbing the peace, malicious mischief, and possession of a small amount of illegal drugs with the intent merely to use them) that are punishable by little jail time (e.g., less than one year), fines, or probation

In California, failure to stop (hit-and-run) with death or serious injury [CVC s. 20001(b(2)] or driving under the influence of alcohol or drugs causing bodily injury [CVC ss. 23153 and 23558] can be charged as felonies.

It's the CALIFORNIA Vehicle Code, not the Uniform Vehicle Code, that governs there.

The "best" fats are those rich in Omega-3 fatty acids. Virtually all of the fat found in fish is "good" fat, rich in the Omega-3's. I eat a lot of salmon, which is probably the one fish richest in these good fats. I also cook with canola oil, which is polyunsaturated and cholesterol-free. I fry with peanut oil, which has the same properties but a much higher temperature-handling capability. I use only Extra-virgin olive oil in my salad dressings and sauces. These are by far the "best" fats. However, if you're trying to lose weight, remember -- they're not called "fats" without a good reason! I don't have a weight problem, so I can consume them in moderation. Anyone watching the bathroom scale should probably avoid them altogether -- except for the fish, which is good for you whatever your dietary concerns.

I think it's time we gave up the notion that all religions and cultures are
worthy of respect. It's also time to give up on the notion of root causes of
who did what to who. Nothing that the United States has done has justified the
actions of 9/11. Terroists and the governments that harbor and foster them are
unworthy of anything but a total retaliation.

Everything was 304SS except the 55 gal. drums which were plastic.
The piping was the quick-knockdown stuff and everything including the
pumps and valve manifolds were hosed and flushed daily with hot water
which they referred to as "steam". Not. The dairy industry exposures I
had indicated that they were much more meticulous than the rest of the
processors. I yanked samples outta the BBQ sauce packaging line for
checking and found a hairpin in one of the packages. I only worked
that gig for 11 months, drove me batty. Some of the old timers in the
biz had tales abt what showed up in food packages that would make yer
hair stand on end.

The Saudi Prince 'tried' to give Mayor Guilliani a check for $10
million, the Mayor politely told him to stuff it.

In the context of the discussion, I think we all know he was talking about McDonald's, not McDonnell/Douglas the airplane builder. Like I said in a previous message, it is a strange spelling. My spelling checker consistently offers "McDonnell's" every time it comes across "McDonald's."

Maybe the nabobs of the refinery had stomachs stronger than steel.
Of course, you can sure bet they didn't drink it, did they?

> The Germans call hamburgers
> "klops". Was that a McKlop ??

LOL. They have slightly changed the names of a few things on the menu, but the menus are still very familiar (mostly in English). Most people would have no problems getting around a McDonald's there. The interiors are laid out almost exactly the same. However, the exterior usually is not. In many downtown areas, they have to fit into existing buildings instead of building a new structure. I have a great picture of a McDonald's in an older stone building in the middle of downtown Heidelberg. If I get a chance, I'll scan it.

That reminds me of a job I one had. I was hired as a veterinarian (no training whatsoever, but that was my title) to inspect dairy products, meat products, and poultry products, for a large grocery chain. The last straw, and the last day working there, was when they wanted me to sign off on some long expired milk after telling me the date on the package (marked "expires on") was really the date the milk was packaged (which would mean that some milk in the store, that had not yet reached the expiration date on the container, had not even been packaged yet).

Now I was young back then, but I was not that stupid. I knew what they were going to do. They planned to sell that milk by claiming that it had been inspected by a veterinarian. And if anyone got sick, I knew exactly who was going to take the blame. And they were not paying me enough for any of that. I refused to sign and quit. But I'm sure they quickly found someone else to sign that paper.

It was a simple metaphor used to explain the concept of associated guilt.

The "tone and tenor" of my words? Man, if you want to argue with me about something I've said, than more power to you. But don't go after me for what you think I've said based on your concepts of "tone and tenor," because so far you appear to be totally tone deaf.

I'm a very straightforward person. I tend to write exactly what I mean. What I write may not always be perfectly clear, but I'm more than willing to explain when asked. Now, if you see that as "changing his story," than perhaps you should ask yourself if you've ever had to explain something you've said and if that was changing your story or a simple explanation.

Of course, I'm sure you've not had too many people following you around trying to maliciously twist what you say based on their idea of "tone and tenor." That seems to be a sport only practiced by a few in these newsgroups.

But isn't the conflict more about the question of whether there is room in Israel for the Arabs that once lived there and the Jews that live there today? How many Arabs lived in the lands now called Israel in 1940? How many Arabs live there today? What happened to all those Arabs and why are they not still living there? We went to war in Kosovo over concerns of ethnic cleansing there. Why should we have less concern over what has happened in Israel?

This is not a condemnation of Israel, Phil. I simply want to understand the situation better and was hoping you might be able to explain the issues above.

Man, you are one twisted individual. You insist you support our freedoms, yet you define anyone who exercises freedom as an enemy of this country. Trust me, my friend, that "Kimand" crap you put in front of my name fits you a whole lot better than it fits me. I believe in the freedoms of this country, while you see those very freedoms as a threat.

You're joking, right? We're never going to be able to move on. We have created who know how many more new enemies for the United States with this attack on Afghanistan - thousands who will spend the rest of their lives hating us and wanting revenge. That is the problem with war - it goes on and on. You will be dead of old age long before our involvement in the middle east ends.

> If it mean's hairlipping every Arab in the
> world, I could care less. (snip)

Then you had better start building a whole lot more bombs. There are almost a billion of them to kill off and we don't have enough nukes to kill more than a quarter of that number.

While I'm asking questions, here is another good one. Why do so many Jews who live here in the United States change their names? Is it to sound less foreign or is some other motivation behind it? I've only known a few Jews in my life (that I'm aware of), but every one that I've known was using a fake name. I say "that I'm aware of" because it is hard to know for sure if so many are hiding their true identities behind a fake name.

I wonder what peaceful, civilized solution you might come up with to solve the "terrorist threat"? Would the solution be any different than dropping bombs and more killing? How long do we give a peaceful, civilized solution before we decide it isn't working, then get violent ourselves? I am playing devil's advocate here to the debate of "how much is too much"? How much is too much peace, how much is too much war? Don't both have to be defined before we truly understand the circumstances we face...and that we ask the rest of the world to face? By the way, the "we" in that scenario could be us or them--either way, someone is making the decisions.

I think it's kind of like the vegetarian that says they are a vegetarian because they lead a non-violent life; but smushes any bug they might see--because "that's different."

>
> Since the inception of

>

I don't think there's anything inherently wrong with that. I would have done the same thing with that check--given it back; but the Saudi Prince probably has a point to his comments that our government, and those of the rest of the world, should at least seriously debate. It is already a given that current Middle East policies are not, have not, and will not work. Maybe there's something else to be done/tried.

Since you insist on stretching things just to be nitpicking, let's elaborate on that. The Prince did indeed give Guilliani the check. It was later that the prince made the statement about our policies that the good mayor changed his mind.

Lessee, here....We helped them fight the Russkies, supplied them with enough hardware to get the job done, then we left the region when that was ended. So a dozen years later, they attack us on our own turf. But it was *US* that changed sides. Yeah, Right! Did we never do anything that suited you?

U'd btr stick to binary code, it's harder to screw that up what with only two possibilities.

Through your fog, you finally saw a piece of something clearly. But only a
piece of it.
That's exactly why we must do what we're doing. What is it about WAR that you
find so difficult to understand?
Is it just because you'd like for us not to have to be in one? News Flash--We
all share that! But you and Dwight would rather just let them win so that
you can feel better about yourselves until they do. Retch!!!

One word: inflation. Tuition was $3000/yr in 1972 and $4500/yr in
1975. You do remember the 1970s? I had hair back then....
> >
> >Plus I went for four years and you went for five.

Same here. Not as big paychecks, though.

> No wasted kiddie summer jobs as
> lifeguards in Wildwood for us like you weenies did.

Not me. Worked right through the school year, fulltime when school was
out, parttime when classes were held. If ya can call 30+ hrs/wk "part
time".
> >

We had double-digit inflation and low single-digit interest. No
interest at all until 9 months after graduation. If interest rates
are far enough below inflation and you can get a loan, it's dumb to

pay cash. Econ 101.

Add to this the fact that post-graduation pay was significantly
higher, and I wish I'd borrowed more.

Whar you so studiously ignore (don't you?) is that they've been there for a LONG time, and we've just as studiously ignorted them, to our own grief. We can no longer ignore them, but you'd have us appease and accomodate them yet one more time, so that they can continue on their stated mission of destroying us. In short, you would aid and abet the terrorists in their mission.

Now, I know that isn't what you said. But that matters not at all when that is the end game..

A classic example of trying to 'buy things to be your way'. Most of the time it seems to work. (check Clinton as a prime example) Go Rudy!

Yeah, we know, you've said that repeatedly, only to counter it with your
postings.
As it happens, I also believe that those freedoms were hard won and worth
defending. I see you
paying only lip service to the concept that freedoms, having been hard won, must
be vigorously defended,
especially when the threat is as direct as it now is. You *and KIM* are clearly
of the Neville Chamberlain
school of thought. Read what happened there, it's very revealing and clarifying.
Appease a determined
agressor and pay the price. We have already begun to pay the price for all the
years of neglect. Now we must
defeat the enemy or be defeated ourselves. You *and KIM* are too obtuse to
understand.

Do YOU know that they are not? And if not, so what? Not all of our military is attacking them, either.

Pick your nits, Dwight, you clearly must do that to have any position at all. We know without doubt that the Taliban-who by the way runs the Afghan military, or who did until a couple weeks ago, not only aid and harbor Bin Laden and company, but actively participate in the training of terrorist operatives to clandestinely attack US on USA soil and elsewhere.
Given the events of September 11 - not even considering the fact that their plans for that day were met with only very limited success, despite all the carnage that limited success created- our military response, which by the way, is probably very early in its overall length, is much more than justified, it is necessary and even mandatory. WE WERE ATTACKED IN A COORDINATED SERIES OF ACTS OF WAR!!! What more needs to be said? Anyone with even a small piece of a brain should be able to comprehend that.

The Taliban certainly didn't change sides. The US supported
the Taliban against the Soviets. Then the US removed the
support. Then the US attacked the Taliban. Changing from
support to attacking is changing sides, Dick. We once were
for them and now we are against them. They haven't changed.
We knew they were religious radicals when we supported them.

"War" is a legal term. We are not legally at war. What's hard
to understand is how we can be at war without being at war.

Well, I'm not Jewish but I'll take a shot at this one. Here's what one goy has picked up over time:

First off, it's my understanding that every observant Jew has a Hebrew name, for religious reasons. This name may or may not exactly correspond to that person's "English" name.

Many immigrants, not just Jews, had their names changed at Ellis Island because the clerks were too lazy or too ignorant to deal with "odd sounding" names. Immigrants often wouldn't protest because they were afraid of being sent back. Ever hear of the ship "St. Louis", and what happened to its 900 passengers?

Many immigrants, not just Jews, changed their names to avoid being obvious targets of ridicule, bigotry and persecution. I'm old enough to remember when some places were actually proud of descriptions like "exclusive". And I remember when an "ethnic-sounding" name would mean being rejected for a job, promotion or admission to a school.

Folks,

The results of Field Day 2001 may be viewed at the "members only" part
of the ARRL website.

Interesting trends:

Participation UP 4.3% from FD 2000
Total QSOs about the same as FD 2000
Phone QSOs DOWN 4% from FD 2000
CW QSOs UP 5.1% from FD 2000
Digital QSOs UP 37.9% from FD 2000 (digital makes up only a small
percentage of FD QSOs, however).

So what would you prefer? A conflict? A police action? It's easier to call it a war and have it done with. Arguing about the semantics of whether the terminology is being used in the proper context will turn into another tiring "forced" debate.

Just as a supplement to what Jim said, if you look through history, Jews have been driven out of many lands through the centuries. The only way they could survive was to assimilate into the culture they found themseleves in, becoming very good practitioners of the "when in Rome" concept. This was the only way they could keep their culture and faith alive.

>correspond to that person's "English" name.

Let's separate Church and State as the general phrase goes
in civics lessons ("church" is a general term and could also
be "temple" or whatever, the meaning being a religion).

Oddly enough to the Eastern American thinking, English is
NOT the most common language, either written or spoken,
in the world. Far more humans use syllabic-based
languages than those who use the "western" alphabetized
languages.

While the USA has no official language, it is clear that laws
and regulations, all the records of the USA government is
carried on in the English language. Names and other
pertinent data of immigrants cannot be translated exactly
into English. This is particularly true of syllabic-ideographic
languages of Asia.

>Many immigrants, not just Jews, had their names changed at Ellis
>Island because the clerks were too lazy or too ignorant to deal with
>"odd sounding" names. Immigrants often wouldn't protest because they
>were afraid of being sent back.

I have some relationship to this, both parents being immigrants
(in 1924 and 1928) from Sweden. Scandinavian languages all

use the "western" alphabet, all the letters of English plus a few more alphabetic characters called "umlauts" by some. My mother's family's surname was changed in the first letter from an 'A' with a single dot over it to an 'O' since that was the closest approximation to the 'A-with-single-dot' umlaut. My father and uncle's surname had the two "ss" dropped to a single "s" in what might have been an act by "clerks too lazy or ignorant" but that was convention at the time and not unheard of among immigrants.

My late uncle Herb used to tell of his amazement at Ellis Island when the Judge who had to preside over my mother's family's final immigration entry spoke "perfect" Swedish. That judge was definitely not of Swedish ancestry. Whether or not he could be described as "lazy or ignorant" or a "clerk" is shrugged off as lazy, ignorant commentary by an American "native." :-)

>Many immigrants, not just Jews, changed their names to avoid being
>obvious targets of ridicule, bigotry and persecution.

That may have been the case in the northeastern quadrant of the USA which seems to have unbreakable ties to Europe. It is not a truism of the midwest, mountain, or western regions of the USA. Los Angeles has the largest ethnic grouping of Hindis in the USA. They generally have "two" names, one for legal purposes in English with the other one in keeping with their ethnicity and religion. Can anyone write in English the ideographic-syllabic versions of Asian-ancestry names in anything approaching exactness?

>I'm old enough
>to remember when some places were actually proud of descriptions like
>"exclusive".

I'm old enough to remember some hobby activities which were inordinately proud of "exclusivity" by license class and other items of lore, tradition, and mythology. :-)

>And I remember when an "ethnic-sounding" name would mean
>being rejected for a job, promotion or admission to a school.

And I remember (from a week ago) where an "amateur-ethnic" ethnocentric attitude was an Absolute Requirement to associate in any way by some ethnocentrists in a newsgroup.

It still is.

Few in here were born before the end of WW2. They don't
understand nor can they appreciate the outpouring of
patriotism that occured here after December 7, 1941, nor
after December 8, 1941, when Germany and Italy formally
declared war on the United States. For nearly five years
those three countries (Japan, Germany, Italy) were enemies
of the USA and were to be conquered as evil.

Japan, Germany, and Italy are now friends of the USA, allies
in a common cause.

Carroll doesn't seem to understand that what was once
"rightful" can be changed by time and circumstances.
That's sort of like his stance on code testing...it's always
been there and Must Always Be There...because that is
what Carroll Believes. Wrapping himself in the flag of the
USA while condemning those who do not Believe as He
does is not an act of patriotism. It is just rationalization.

Indeed, Carroll is just rationalizing His own opinion. Those
who do not believe as he does are all to be piloried as
perverse and "wrong." :-)

If that person makes a Pronouncement, then it Must be "true."
:-)

>The Technician license, which grants ALL US amateur operating privileges
>above
>30 MHz, has not had a code test for more than a decade, And the written test
>for it is not very difficult. Yet LHA has never gotten one.

Aha, ethnocentricity enters the picture. One Must have an
amateur radio license in order to discuss policy matters
about entering same! :-)

>... If LHA wanted to have a ham license and a
>ham station, I think he would have gotten both a long time ago.

Impossible. I do not have the ethnocentric attitude to love
and worship morse code or the associated mythology of
amateur radio. :-)

>All I know about Mr. Anderson is his postings here on rrap. He never posts
>anywhere else, does not write for any current publication I know of, and of
>course is not on the ham bands.

"Not on the ham bands?" Presumably only those "ham
bands" are those in the HF part of the spectrum? How
do VHF through microwave amateur radio allocated bands
propagate to the east? :-)

"Does not write for any current publication?" Miccolis should
investigate how many different publications exist in the USA.
There are thousands. Of course, the only qualifier is that such
publications must be those that "he knows." :-)

"Never posts anywhere else?" :-)

>Actually, I never recall him saying that he should get a license without the
>test.

Quite true.

>>Sitting for the exam would validate his
>>mortality, and he can't stand that.
>
>What I recall is that he has no regard for the license as any sort of
>accomplishment.

Conditional truth there. I've not revered, honored, or worshipped
a maximally-upgraded amateur radio license as the equivalent
of an academic PhD, Nobel Prize, or even Presidential Medal
of Freedom. Some seem to insist that others revere and honor
such things along with worship of icons of accomplishment
hanging on the wall.

>Also no regard for most things hams consider as accomplishments
>in radio, such as code speed, homebrewing equipment, working contests or DX,
>passing traffic, etc.

"...most things hams consider as accomplishments?"

Has there been a poll that stated the above? I don't think so.

I've never given any favoritsm to morse code speed, working
contests, etc., as prerequisites for A LICENSE TEST or the
reasons for retaining certain standards of the LICENSE TEST.

I realize that some are unable to separate their own personal
desires, opinions, beliefs from the accomplishment of
passing a license test. Those individuals will not debate or
discuss anything except under their own personal terms.

>Maybe. Or maybe his aim is to try to bring out the worst in those who
>disagree with him.

Untrue. See below...

>Notice that he never says what his goal really is (other than
>ending the code test) and never gives any sort of coherent vision
>of where ham radio should go, other than "no code test, one class
>of license, no kids under 14".

My goal is simply the elimination of the morse code test
for any class of amateur radio license. As simple as that.

Those who revere and honor morse code ability and
associate it so much with amateur radio that they must
keep it forever are the ones suspect. Their only "vision of
the future of amateur radio" is more of the same that they
enjoy doing. That's a purely selfish attitude of theirs.

An amateur radio license is simply a grant from a government
to allow operation according to regulations within specified
bands of the EM spectrum. It is not an academic achievement
of any kind. It is a permission to operate a radio in a particular

radio service.

Some in here think that an amateur radio license is their
single most important accomplishment in life...at least from
how their attitudes are visible to others. It may be so to
them but even if so, they have no right to impose their will
on others and make others do the same.

>Fascinating.

I believe Commander Spock as made a Pronouncement!
:-)

>>>But not me. I'm living in the present, working on the future.
>>
>> Ditto.
>>
>'zactly.

Is "working on the future" comprised of a terrible, almost
religious passion of preservation of the status quo?

In article <9f4bfe89.0110230832.7ce5d918@posting.google.com>, n2ey@aol.com (N2EY) writes:

>Yet your behavior and comments here show otherwise. You repeatedly
>attack the messenger (me) for having the audacity to disagree with you
>and point out errors in your posts.

There is no "audacity" in disagreement. There IS audacity in manufacturing "errors" that aren't there...such as in the amateur radio statistics tabulated by AH0A. :-)

>I think you are angry that the person you described as phony, idiotic
>and delusional turns out to have EE degrees and some experience with
>both RF design and the Smith Chart.

Heh heh heh. :-)

As n2ey@aol.com once wrote, "full of yourself, aren't you?"

>Truth is, you spend more time posting here than almost anyone.

"Truth" is not in this case. Any reader can scan past messages and see who "spends more time posting in here." :-)

>Shortage of time doesn;t seem to be a problem for you.

True. Retirement does have certain benefits. :-)

>As Babe Ruth said: "It ain't braggin' if ya really done it."

It IS bragging if all you've done is claim it and cannot provide any proof of accomplishment.

>> So far, in
>> regards to "mastery of the Smith Chart" all that anyone
>> has seen is some homework on "examples" that were
>> contributed after at least a week.
>
>All that YOU have seen.

All that ANYONE in this newsgroup has seen. :-)

>The posts I made were practical examples of Smith Chart use in HF
>amateur radio applications. All of them could also have been done
>other ways. And your "deadlines" mean nothing to me.

They might even have been cribbed from the May 1978 issue of Ham Radio magazine for all I know. :-)

For someone who has an inordinate amount of free time to
spend on amateur radio newsgoop messaging, I'm surprised
that there was no immediate response of a "tutorial" on
Smith Chart use. Anyone who claims to have "mastered the
Smith Chart" should have jumped right in on the subject just
like he jumps in about morse code use. :-)

>What is ridiculous and absurd is the idea that all proposed change is
>somehow automatically "good" and must be accepted by all. What is
>ridiculous and absurd is the idea that those who oppose change are
>somehow automatically "bad" because they see the proposed "new order"
>as inferior to the old.

I've not claimed any "new order," just some reasons for ending
the morse code test for an amateur radio license. I've only
claimed that removing the code test would give more citizens
freedom to enter a hobby activity involving radio.

OTHERS opposed to the elimination of code test seem to think
that such elimination is "bad." Their judgemental viewpoint is
in here, standing out, no ambiguity. Under those circumstances
retention of the code test is "good" while elimination is "bad."
I don't agree with such a personalized viewpoint.

>> Anyone who continues to favor a code test as a pass-fail
>> criterion for amateur radio licensing seems to think they
>> are "deserving" of a federal welfare program to yield them
>> titles, status, and privilege.
>
>That's your distortion of reality, Len.

It is based on what other code-lovers have written in here.
The "distortion" is not mine.

>Translation: "Old" = "bad", "new" = "good"

No. Incorrect. Retention of old regulations with the only
reasons given as personal desires are not good...those
are selfish.

>You and others promote "change" as if all change is automatically good
>and any resistance or opposition to change is automatically bad. I
>simply gave a clear example of how "change" is not always good.
>Simple.

Incorrect in judgement. FREEDOM is not a bad word.

Removal of the amateur code test will remove the strict,
regimented alignment of amateur radio = morse code.

While that may seem revolutionary to some, the FCC does
not consider that morse code skill to be a qualification for
decision on whether or not an examinee is worth the grant
of an amateur radio license

To a limited degree, the IARU now agrees with that.

Freedom from old, antiquated regulations is considered is
considered "bad." Interesting. Maybe even "fascinating."
The new order that was the old order. Status quoism.

>> The FCC does not require any part of its staff to USE
>> amateur radio...nor to be licensed as an amateur.
>
>Are you part of the FCC, Len? I don' think so.

Is James Miccolis part of the FCC? I don't think so.

>FCC is empowered to regulate civilian radio in the USA. You aren't.

James Miccolis is not empowered to regulate civil radio in the USA. :-)

>"Rather than present a coherent future direction for a radio service
>that you don't even use, you sit on the sidelines and argue endlessly
>with those who DO use that service"

Ah, here we go with good old ethnocentrism again! :-)

Where was there some NEED to "present a coherent future direction for any radio service" as some kind of qualifier for discussion on regulations that pertain to entering a radio service?

>It's a true observation.

No. Miccolis' observation is biased by personal desires.

>> Miccolis favors "turf ownership," part of the human Territorial
>> Imperative which is, in this case, false and misleading.
>
>I have no idea what this is supposed to mean.

Possessing an amateur radio license is the turf qualifier. That license was obtained through morse code ability. Those who argue against any amateur license morse code testing are automatically relegated to some other turf. it's like "squatter's rights." :-)

>But you don't do that very often, Len. Even though almost everyone
>here signs there posts with a first name and callsign, you call those
>who disagree with you by their last names, or diminutives of their
>first names, or nicknames you make up based on their profession,
>nationality, or other characteristic.

Ah, so anyone licensed in the amateur radio service may
show whatever disrespect they care to show to those not
licensed in the amateur radio service? But not the other
way around? Ah, so, SIR! :-)

Double standard! :-)

>> He cannot be called "Miccolis"
>> because using a surname is a "bad name?"
>
>It's inapproriate in this sort of forum. Why do you do it - not just
>to me, but to anyone who disagrees?

Where are the "appropriate" guidelines published for a
very common debate-discussion technique? In QST?
Industry Canada publications?

>I know. Even when your errors are pointed out, you don't accept the
>obvious truth.

I don't accept another's opinion as "truth" or that "errors" have
been made in my interpretation versus another's interpretation.
[AH0A statistics tabulations]

>You don't accept anything you disagree with here no matter how much
>proof is presented. That's obvious, Len.

What "proof?" Show all the proof that Miccolis' opinions are
"good" while all who disagree with him are "bad" and "in
error."

>And you are mistaken. Nowhere have I said others must do as I did.

Then why does Miccolis insist on an amateur radio
license as a "qualification" for discussion of regulations
regarding a first license?

>room in Israel for the Arabs that once lived there and the Jews that
>live there today?

There had always been a Jewish presence in Israel from Biblical
times, and up until the British Mandate of 1919 we lived in harmony
with the Arabs, most of whom settled in the land in the 1880s.

>What happened to all those Arabs and why are they not still living there?

During the Mandate, before the War of Independence (1948), the
British did a good job of stirring the "nationalistic" urges of
radical Arab leaders to interfere with the restablishment of an
independent Jewish state in Israel.

Those leaders urged the indigenous Arab population to flee and wait
until their armies threw the Jews into the sea and then they could
return and reclaim Jewish lands, houses, and personal property for
their own. And so the Rufugee Camps in the neighboring Arab
countries filled up.

There never was such a creature as Arab "Palestine", the derogatory
name applied to Israel by the Romans who conquered the lands 2000
years before. The "Palestinian" homeland is east of the Jordan
River in what is today called "Jordan".

>Why should we have
>less concern over what has happened in Israel?

Israel has always welcomed Arab residents who want to be loyal
citizens with all obligations and privileges of Israeli citizens,
including voting and sending delegates to the Knesset (Parliament).

It's "the others" who are the problem.

> This is not a condemnation of Israel, Phil. I simply want to
>understand the situation better and was hoping you might be able to

Depends what you mean by a "fake" name. My father changed his name
from a Russianized name (Kanefsky) to an "Anglo" name in the
years between the World Wars at a time when it was fashionable for
all immigrants, not only Jewish, to take an Anglo first or last name
to show that they were "real Americans". He adopted the name in the
1920s (his Naturalization papers show "Kanefsky") and changed it
legally after WW-II when I was 10 years old although my birth
certificate shows both my name and his name as "Kane". In this
generation, very few names are "fake" names, most being genuine
names at birth, and some Jewish last names are genuine cultural
names, such as Cohen, Katz, and so forth. Some names were changed
by the bigoted immigration inspectors in Ellis Island who either
couldn't or wouldn't deal with the foreign-sounding names.

Our ancestral name in the Middle East (Babylon/Baghdad) was Kanafi,
forcibly Russianized to Kanefsky when the family settled in the
Ukraine in the 17th Century. Parts of my family have reclaimed use
of the original family name (Kanafi) both here in the 'States and in
Israel. I have not changed it legally here because all of my
professional and personal papers are in my birth name, but I can use
"Kanafi" in Israel if I so choose.

Does that clear anything up?

Jesus.

Someone actually gets it :)

The states can and do enact any laws that are MORE stringent than the laws
and guidelines provided by the federal government.

They may NOT enact laws that are less stringent, except as provided by law.

Otherwise... Utter chaos would result. However, this is the primary thing
that got the speed limit raised from 55 to
where it is now.....: The State of Nevada raised their speed limit to
infinitum during a brief period, and it actually
went to Congress about what to do about it. I was in the state at that
time, however, unable to drive (still in High School).

Please provide the Uniform Vehicle Code for the State of California.

The following was taken from http://www.dmv.ca.gov/pubs/vctop/lov/lovd11.htm

F 21464(c) Signs, signals or markers, damaging, removing or attaching
material to, resulting in injury or death.

M/F 21651(c) Driving the wrong way on a divided highway which causes
injury or death.

F 23110(b) Throwing missile with intent to do serious bodily harm.

F 23153(a) Under influence of alcohol, drug, or combination, causing
injury or death to another on highway or other than a highway.
F 23153(b) Driving with a BAC of .08% or more causing injury or death
to another.
F 23153(d) Commercial Driver, driving with a BAC of .04% or more
causing injury or death to another. (Effective 1/1/92).
M/F 23175(a) Driving under the influence, fourth or subsequent
offense within seven years.
M/F 23175.5 (a) Driving under the influence, within 10 years of prior
felony DUI.

>

> (e.g., less than one year), fines, or probation

Blah blah blah.

I know what the difference between a felony and a misdemeanor is.

Throwing out jargon is a way of pulling people off the topic.

That was a good one, Jim. I had a lot of hair back then (longer than my wife's hair today). In fact, most who know me today would be surprised if they saw a picture (if they even recognized me). It was another time.

Well, I'm not going to sit here and argue with you endlessly. I've have not seen any EVIDENCE of that (direct aid and training of terrorist by the Taliban) and neither have you since we're both watching the same sources (CNN News, etc). The difference between us is that you're willing to accept what you see on the news, or the claims of some government officials, without question, while I want more before I blindly throw my support behind an effort to kill people.

> (snip) WE WERE ATTACKED IN A COORDINATED
> SERIES OF ACTS OF WAR!!! (snip)

Well, we were attacked. Everybody already knows that, Richard, so why keep repeating it. The question is who attacked us, not whether we were attacked. And I've already said that once we find out that, we should do whatever is necessary to get the attackers. The problem is that I'm not convinced that the Taliban is the attacker, therefore I'm not convinced the attempts to overthrow that government (by killing thousands of Afghan soldiers) is correct. And you've said absolutely nothing to convince me one way or the other. You simply rant on about just killing people, which I'm simply not blood thirsty enough to do.

First off, none of your personal freedoms have diminished since 09/11/01. None.

Second, "perfect personal freedom" and "perfect personal security" are mutually-incompatible polar-opposites on the extreme ends of a single continuum.

A good society strikes a balance at a point somewhere along that continuum, and the point moves as threats to security arise or diminish.

If you want perfect personal freedom, move somewhere where there are no laws, no police, no national guard, no central government, in a word NO security of any type. But don't come whining to us when someone pisses in your Post Toasties, or sends you an anthrax-laden Halloween card.

With all kind wishes,

You're not pleased to let my posting speak for themselves - you continue to bring up and twist what I've written in the past. And when nobody agrees with you, you try to rewrite what I've written (based on the "tone and tenor" of my comments). Has it escaped your notice that you're alone in your rant against me? Others might disagree with what I've written (and I'm sure many do), but they don't go around making a campaign out of twisting my words. Heck, I disagree with much of what you write, but you don't see me following you around trying to twist what you say. Anyway, I've had enough of this. Most here know me well enough to realize your garbage is just that, so I'm not going to waste more of their time by endlessly responding to it.

What pain? Any of the following can be used to make a single-tube transmitter which can be tossed together in an hour or two: 117N7GT, 6AV6, 1614, 3A5, 50L5, 6CX8, 6AG7, 6GW8, 6AQ5.

Make it a 2-tube xmtr and the number of circuits available becomes almost endless.

There is a very active email list devoted to home-building with tubes: "Glowbugs."

Are you out of your mind? The lands now called Israel was, and is, among the most valuable real estate in the middle east. It is the seat of most Arab religions, contains some of the most fertile farm land in the region, and was the door for most trade with the west for many Arab nations. Thriving cities and cultures existed there long before the "inception of Israel as a nation in 1948," as you put it. Many Arabs believe those lands were stolen from them and that is what they cannot stand.

Well...it was a pleasant few days...Why can't this creep stay lost...?!?!

>James Miccolis is not empowered to regulate civil radio
>in the USA

Sure he is...He and every other citizen who is old enough to vote and
without felony...just like you, Your Putziness.

>>"Rather than present a coherent future direction for a radio service
>>that you don't even use, you sit on the sidelines and argue endlessly
>>with those who DO use that service"
>
>Ah, here we go with good old ethnocentrism again!

Nope...just simple truth...You freely antagonize and instigate yet you
clearly have no vested interest in Amateur Radio at any level.

>Where was there some NEED to "present a coherent future
>direction for any radio service" as some kind of qualifier for
>discussion on regulations that pertain to entering a radio
>service?

Lennie, just when I think that you could not possibly further embarass nor
humiliate yourself, you pull a jem like this out of your bag of tricks.

Thanks. I needed that.

Are you REALLY this stupid, or is it just the limits that wifey will
allow...?!?!

>No. Miccolis' observation is biased by personal desires.

You truly are the king of the Pot/kettle/black syndrome, Your
Intoleranceness.

>>It's inapproriate in this sort of forum. Why do you do it - not just
>>to me, but to anyone who disagrees?
>
>Where are the "appropriate" guidelines published for a
>very common debate-discussion technique? In QST?
>Industry Canada publications?

It's in the "Lennie Rules". You demand certain treatment but then insist on showing that your word is worthless. You did it with me. You insist that "others" draw "debates" into ad hominem tactics, yet it is YOU who is the catalyst for the falmes...no one else. You.

>>I know. Even when your errors are pointed out, you don't accept the
>>obvious truth.
>
>I don't accept another's opinion as "truth" or that "errors" have
>been made in my interpretation versus another's interpretation.

Lennie-to-English: No matter what facts I am presented with, from what source or reference, I will ignore it or dismiss it as irreleveant. Period.

That's alright, Lennie. We already have YOUR number. We know you are a liar, and we know you are here for no other purpose than to antagonize a subset of society that you have no other way to wreak your havoc upon legally.

>Then why does Miccolis insist on an amateur radio
>license as a "qualification" for discussion of regulations
>regarding a first license?

As YOUR conduct and frequent misadventure herein has demonstrated CLEARLY, one cannot fully appreicate the needs, objectives and purpose of the Amateur Radio Service without active participation.

Your understanding of the technical aspects of the inside of the box notwithstanding, you are COMPLETELY ignorant of most on-going Amateur programs and practice.

You ARE ignorant. That is not contested. Just how are we going to get rid of you is. You are too far away for a can of "Raid", which is what I would apply to most roaches.

Man, your numbers are totally false. According to the Time's World Almanac (2000 edition), the total population of Israel today is 5,749,760. If you're correct that 5 million Arabs live there today, than we're to believe that only 749,760 Jews live there. Of course, that is total BS since that same Almanac says that Jews represent at least 82% of the population. By the way, the remain 14% is mostly Sunni, the only Muslim group not yet totally "displaced," as you put it.

>However, if you're trying to lose weight, remember -- they're not called
>"fats" without a good reason! I don't have a weight problem, so I can
>consume them in moderation. Anyone watching the bathroom scale
>should probably avoid them altogether -- except for the fish, which is
>good for you whatever your dietary concerns.

I have to disagree with this last idea, Larry. For many people, eating a lowfat diet leaves them unsatisfied, so they eat more of other things in an unsuccessful attempt to compensate. Often "low fat" and "no fat" foods have no fewer calories than their fatty counterparts, because they are full of sugars. I found that when I went from a low-fat, high carbohydrate diet to a low carbs, low sugar, high protein/good fat diet, I LOST weight! That's just me, of course - each of us is an "experiment of one".

Gotta go. I have a nice big piece of salmon poaching as I write this. Cold salmon for lunch this week!

An American terroist tried to restrict some of my freedoms on 01/25/99. [perhaps you've heard of that? :-)]

>Second, "perfect personal freedom" and "perfect personal
>security" are mutually-incompatible polar-opposites on the
>extreme ends of a single continuum.

Was a "perfect" situation so written? I don't think so.

>A good society strikes a balance at a point somewhere along
>that continuum, and the point moves as threats to security
>arise or diminish.

I've always thought a "good society" would accept a discussion on subjects...such as what might have been the case in this newsgroup. I was wrong. Part of the "good society" has been engaged in a small war of its own to keep the status quo in amateur regulations.

>If you want perfect personal freedom, move somewhere where
>there are no laws, no police, no national guard, no central
>government, in a word NO security of any type. But don't
>come whining to us when someone pisses in your Post Toasties,

I'm sure no one would dare piss in Brakob's cereal. From the sound of things a biological agent would go scurrying away from Hans in fear of its cellular life. :-)

However, it is clear that no one dare disagree with the testosterone-laden "all kind wishes" broadside.* Maybe that is a bio-terror agent in and of itself? :-)

>With all kind wishes,

LHA

* There's a problem with "crossing the T" and shooting. Despite the bravery-in-words exhibited and attempts to put another down, the rest of the "T" keeps shooting back. Please consider that the last "crossing of the T" was 46 years ago...hasn't worked much since.

>United States and any allies we can drum up are going to "march in" over
>there and change what hasn't been changed in several hundred centuries is
>delusional.

In that case a lot of historians have recorded a lot of "delusion."
:-)

Let's take a couple of examples of "marching in" that happened
in the middle of the previous century...to Japan and Germany.

Japan had seen many centuries as a feudal warlord type
of rule, honoring of Samurai and the Bushido (code of the
warrior). While they had made some inroads into
"western" government (despite having an emperor), the
warlords had taken over the government in the 1930s and
made aggressive moves into the Asian mainland. They
expanded too far in deciding to attack the USA. The end
result was that US forces marched into Japan in 1945 and
fairly well changed Japan from that time on. I saw a part
of that change, arriving there just after the Occupation
had ended.

Germany went a similar route but used a different
philosophy of aggression. They lost, too, but the
Communist forces had marched in from the east and
for a long time there were two Germanys, complete
with internal conflict along with two new philosophical
views. Eventually Germany was able to unite and
become a single "western" nation and an ally in
NATO as well as an ally in the fight against terrorism.

>All that we have achieved is a probable outcome of far more terrorism
>wreaked upon us than we ever bargained here from behind our borders. That's
>*all* we've managed to do.

The alternative was to do nothing after 9-11. In all
probability the USA would have had more of the same.
The USA was rudely and monstrously given a lose-
lose choice by others on our homeland. The USA will
turn that into a win situation...but not in the
conventional warfare sense of "troops marching in
and taking over."

The USA has always had enemies of one kind or another in its entire existance. In the latter half of the last century the USA's position on Middle Eastern affairs has been to support Israel but not its neighbors. Those neighbors have not forgotten that nor are they likely to do so...except by the USA showing some strength in its retaliation, a willingness to retaliate. To do nothing at all is a sign of weakness and that weakness is an open invitation for all the extremists to enact more terror against the US.

Well, I think Phil Kane is a little more than "not exactly"
corresponding to Peretz Moshe Kanafi. It's like a hundred miles apart.
But, perhaps it is his Hebrew name, but why wouldn't he just openly
use that name in public. This is the first time I've ever heard Phil
even mention it. For that matter, this is the first time I've ever
heard Phil openly admit that he is Jewish (which does shed some light
on some of the previous political positions he has taken in this newsgroup).

> Many immigrants, not just Jews, had their
> names changed at Ellis Island because the
> clerks were too lazy or too ignorant to
> deal with "odd sounding" names. (snip)

I don't think Phil came through Ellis Island.

> Many immigrants, not just Jews, changed
> their names to avoid being obvious targets
> of ridicule, bigotry and persecution. (snip)

And I don't think Phil, a successful lawyer, ex-employee of the FCC,
and so forth, has suffered from too much ridicule, bigotry and
persecution. If so, I'd like to be persecuted like that. And I haven't
seen anyone ridiculing him in this newsgroup since mentioning that he
is Jewish (and you know how these newsgroups are - if there was
someone here that didn't like Jews, they would be all over him by now).

> What's a "fake name" and what's a
> "real Jewish name", Dwight?

Huh? Oh, you're talking about my comment about hiding true
identities behind a fake name. I was talking about the non-Jewish
sounding name used here, not the Jewish name.

So just let more Americans die, but make sure all of my freedoms
are safe. Wait until the 'more and increasing threat' effects you
and your family and you will be screaming about how the government
should have done more to protect you.

Your "challenge" aroused my interest Jimmy. I went to a local
supermarket and equipped myself to validate your "experiment".
Reynold's wrap, a small can of Campbell's tomato juice, I already had
a bottle of Heinz catsup, plus I grabbed a bottle of hyper-toxic
"Sweet Baby Ray's" BBQ sauce. I mixed (tried to: They seem to be sorta
mutually immiscible) a few tablespoons of each in a Reynolds Wrap

sorta bowl I fabbed which I then deposited in a paper bowl in case the holes you know all about came to pass. All of which have been ensconced on top of a hot old iron radiator for a day and a half so far in an attempt to accelerate any reactions and and no holes have come to pass yet sweetums.

Good answers, Phil. So what is being done, or can be done, to get that harmony back? This conflict has been going on for almost fifty years and the divide seems wider today than it ever was. And now the conflict is making it's way to this country. There has to be a solution. You've been there and I haven't, so what is the answer?

>There is no "audacity" in disagreement. There IS audacity in
>manufacturing "errors" that aren't there...such as in the
>amateur radio statistics tabulated by AH0A.

Then why do YOU take such great liberties with the manufacturing process,
Your Lyingness?

>"Truth" is not in this case. Any reader can scan past
>messages and see who "spends more time posting in here."

When Jim posts in here his posts are timely, accurate and considerate.

Yours are not.

And Jim will have to post a lot of stuff here to EVER hope to catch up to
you, Lennie. A LOT.

>True. Retirement does have certain benefits.

Yours is the opportunity to harrass, antagonize and insult. Not a very
honorable way to spend one's waning hours.

>It IS bragging if all you've done is claim it and cannot
>provide any proof of accomplishment.

So what's your point? You do this in almost every post you make. You
have not proved a single thing here, save your foolishness, dishonesty and
cowardice.

>For someone who has an inordinate amount of free time to
>spend on amateur radio newsgoop messaging, I'm surprised
>that there was no immediate response of a "tutorial" on
>Smith Chart use.

We're still waiting on your microwave applications tutorial. Seems you
have a real bad habit of accusing others of "not" doing something, yet doing
nothing of your own.

That IS what we have come to expect from you, Lennie...NOTHING. Well...
let me clarify that...nothing CONSTRUCTIVE.

>Anyone who claims to have "mastered the
>Smith Chart" should have jumped right in on the subject just
>like he jumps in about morse code use

Kinda like someone who claims mastery of microwave technology?!?!

>I've not claimed any "new order," just some reasons for ending
>the morse code test for an amateur radio license.

Lie.

>I've only
>claimed that removing the code test would give more citizens
>freedom to enter a hobby activity involving radio.

That it would, but that is not all you have claimed, ergo ANOTHER lie.

>>You and others promote "change" as if all change is automatically good
>>and any resistance or opposition to change is automatically bad. I
>>simply gave a clear example of how "change" is not always good.
>>Simple.
>
>Incorrect in judgement. FREEDOM is not a bad word.

Lennie opens another package of the "patriotic bunting" that he accuses
others of draping himself in and slings out a catchy snippet that invokes
patriotic furvor.

Of course NO ONE said anything about "freedom" not being good. But Lennie
makes it LOOK like they did, therefore putting himself in position to be
freedom's "defender".

>Removal of the amateur code test will remove the strict,
>regimented alignment of amateur radio = morse code.

No it won't. I hasn't for the last 1 yers, what makes you think it will
now, Your Putziness?

>Freedom from old, antiquated regulations is considered is
>considered "bad." Interesting. Maybe even "fascinating."
>The new order that was the old order. Status quoism.

There is NO "status quoism". The only remaining barrier to the removal of
US Morse Code requirements is deletion of the appropriate paragraph of ITU
regulations. The FCC has sid this...The ARRL has accepted this, and almost
every administration around the world has set thier Code testing requirements
at 5WPM, down from 12 to 20 wpm previously.

Of course Leonard H. Anderson, pathological liar that he is, keeps
insisting that the present remaining code tests are some sort of consipiracy to
keep him and his anti-social engineering buddies out of Amateur Radio. He also
keeps insisting that there is no change in Amateur regulations. Another lie,
easily refuted by anyone who has a few minutes to review the Federal
Register...but he rants on...and on....and on...and.....

I was curious about the corrosion properties of tomato-based sauces, so I did a little experiment.

Took a piece of aluminum foil and put samples of ketchup, spaghetti sauce and barbeque sauce on it -about a tablespoon of each. All were common commerical sauces. Then I let it sit for 24 hours. End result was no observable corrosion of the aluminum foil. Zero, zip, nil.

If it'll take out a turkey baster overnight, I don't want to eat it.

Okay, the word "fake" probably wasn't the best choice, but I couldn't think of a better one to use ("alternative" was the only other word I could think of, but that doesn't really fit either, does it). Anyway, the reason I asked was that I overheard a previous co-worker insisting to another that his Jewish name (whatever it was) was who he really is, which left me with a lot of questions (like why he didn't just use that name then). But I didn't know him well enough to ask and the subject never came up again after that.

> Does that clear anything up?

Well, I didn't need to know your whole family history to clear it up. My question wasn't so much about your name as names in general. But there was enough in all that to answer most of the questions I had.

>Aha, ethnocentricity enters the picture. One Must have an
>amateur radio license in order to discuss policy matters
>about entering same!

Nope...just more proof that you could have been licensed years ago.

Perhaps if you had, then you MIGHT have acquired some practical experience in matters realting to Amateur Radio practice, putting some real strength in your rants.

You have never availed yourself of that opportunity, so you continue to make rants in here that are not clearly thought out nor substantiated by facts.

You look foolish, by your own hand...which makes you look even MORE foolish.

>Impossible. I do not have the ethnocentric attitude to love
>and worship morse code or the associated mythology of
>amateur radio.

"Ethnocentric"...the latest Lennie adjective. At least he got past "perjorative".

>"Not on the ham bands?" Presumably only those "ham
>bands" are those in the HF part of the spectrum? How
>do VHF through microwave amateur radio allocated bands
>propagate to the east?

If your were an active Amateur Radio licensee, you'd know. And you are not.....

>"Does not write for any current publication?" Miccolis should
>investigate how many different publications exist in the USA.
>There are thousands. Of course, the only qualifier is that such
>publications must be those that "he knows."

A search engine comes up zeros looking for Lennie. Perhaps he'd care to enlighten us as to which publications he has written for since 1980-something?!? Perhaps something that is still publishing?

>"Never posts anywhere else?"

Perhaps "Never posts anywhere else using the same screen names he harrasses RRAP with" would have been more accurate.

Of course if he did that, and someone from another NG started a search for Lenof21, Lenover21, or any other of his rrap-associated nomme-de-guerre's, they'd see what a hate-filled liar he is, and anything he did manage to spew out that was even remotely relevent would be dismissed.

>I realize that some are unable to separate their own personal
>desires, opinions, beliefs from the accomplishment of
>passing a license test.

Sure you have...you've done it with your "now expired" GROL and have tried to insinuate that your night-school/correspondence course EE degree put's you ahead of anyone else. Repeatedly.

>>Maybe. Or maybe his aim is to try to bring out the worst in those who
>>disagree with him.
>
>Untrue. See below...
>
>>Notice that he never says what his goal really is (other than
>>ending the code test) and never gives any sort of coherent vision
>>of where ham radio should go, other than "no code test, one class
>>of license, no kids under 14".
>
>My goal is simply the elimination of the morse code test
>for any class of amateur radio license. As simple as that.

Lennie, I LOVE it when you quote yourself, and then prove yourself a liar. You say that your only "claim" is the elimination of the Morse Code test, yet it WAS you that suggested TO THE FCC that an age limit was necessary for an Amatuer Radio license.

>Those who revere and honor morse code ability and
>associate it so much with amateur radio that they must
>keep it forever are the ones suspect. Their only "vision of
>the future of amateur radio" is more of the same that they
>enjoy doing. That's a purely selfish attitude of theirs.

You keep trying to re-inject the rant about "revere and honor (M)orse code ability", yet are unable to explain to us how you would alternately align the Amateur testing program. You have FURTHER yet to explain to us why you suport a 14 year old age limit, when every FCC warning/violation letter issued in YEARS has been to adults.

>Some in here think that an amateur radio license is their
>single most important accomplishment in life...at least from
>how their attitudes are visible to others.

Only you would draw that conclusion...but considering you have no life beyond acting foolish in here, it's no wonder, really.

You really are QUITE the fool, Lennie. Thanks for the laughs!

Makes sense if the name is way out there, but Peretz Moshe Kanafi (Phil's other name) isn't. It doesn't look that hard to pronounce and it certainly isn't any harder to spell than many other names I've seen. Likewise, Phil Kane isn't exactly out there either, so why not just use that (here and in Israel). Anyway, it's none of my business what Phil does. I was just curious about the mentality behind the two names (which he explained).

Again, the very same sentiments you express are "most likely" (can't say for sure because I don't know any of them) the very same sentiments they feel and express. Before anyone goes off half-cocked, think about it. While I don't condone the actions of terrorism, or war for that matter, I also wonder what has to happen to avoid it. What does have to happen? Does the "they" part of the equation have to bear to everything we believe? And, does the "we" part of the equation have to bear to everything they believe? Or, does some real hard work get done on finding common ground?

I view the world much like I would a playground at a school--it's just a bigger stage. One bully punches out a little kid less prone to protecting him/herself. So, a couple of other bullies run over the next day and retaliate against 2-3 of the little brat's friends and him/her. Then, the original perpetrator goes over the next day and wreaks havoc on another 5-10 of those. And back and forth it goes. Pretty soon, there's not many kids left on the playground, and those that are have learned nothing about negotiating through things such as disagreements.

Like I said--to Hell and back with Osama bin Laden, and any other creep. I am not their judge; but can only imagine the evil they will have to contend with upon their death.

Likewise, to Hell with letting them or anyone else interfere with my liberties, civil freedoms, creature comforts, etc. If having all of that--without restriction means I am more susceptible to being affected by terrorism, then sobeit.

For me, it is not about vengeance, it is not about hating them, or hating you or anyone else--it is about not giving in to the threats of anyone regardless of what it may mean to me personally.

War? I don't know what to think of that. I don't feel one way or the other about it--other than cringing every time I hear someone say "why should I care about...." (no matter what side the voice was coming from). Sometime, somewhere, someone has got to start caring--and they've got to start doing it before there's only a couple of kids left on the playground.

Yep. This is never going to be settled, and anyone--*ANYONE* who thinks the United States and any allies we can drum up are going to "march in" over there and change what hasn't been changed in several hundred centuries is delusional.

All that we have achieved is a probable outcome of far more terrorism wreaked upon us than we ever bargained here from behind our borders. That's *all* we've managed to do.

Hey, Dwight? Take your self-righteous self and bend way over backwards.
See that asshole staring you in the face? It's real dark in there but you
might be able to find more sensibility in there than your brain.

Now, what you might do is light up another cig, get yerself another beer--or
is that cheap wine you're on--and work real hard on reading comprehension.

I have no problem at all with war, other than it plain sucks. But, it
happens, right? No big deal. What is a big deal is figuring out how we got
there--and the part of the "we" that you always seem to want to leave out is
the other side. I guess your answer to this whole thing is to just stay at
war for the next few hundred centuries--yeah, that ought to do it.

Cough was that your raspy, cigarette smoke laden lungs I heard?

So what kind of evidence are you waiting for? If some terrorist sneaks a
suitcase nuke into a U.S. city and kills 6 million instead of 6000, are you
still going to want evidence before taking action?

Gawd, you're getting hysterical Dick. OK, I'll go ahead and bite. In what way is not wanting to give up personal freedoms/civil liberties appeasing an aggressor? Please answer that seriously, because I am really trying to understand where you are coming from.

At what price do US Citizens suspend their personal freedoms/civil liberties? If it those things we hold dear here in this country, and it is those things we "say" we defend, and it is those things we ask our military men and women to go and die for--then why not the common citizen be willing to stand tall, and walk and act in freedom, even if it means they are under more and increasing threat because of it?

You would choose to cower and give away those things we hold sacred? Is that it?

I am much prouder an American than that. It is my belief that neither my government, nor my military, nor any foreign power should have the right to affect that which our Constitution, history, prior wars, and prior deaths have spent so much to keep. Can they? Yep, they just did. Do I think it's right? Hell no, I don't. Do I feel safer? Hell no, I don't. In fact, not only are we all now affected because of terrorist threats from foreigners, our own government is suspending our rights. I'd say, "we the people" are pretty much stuck in the middle is what I'd say.

Of course, you are not old enough to remember when wars were
legally declared by the governments of the world. All you remember
are the "police actions" the US engaged in when we were afraid
to declare war. IMO, undeclared wars are a mistake. If we don't
have enough intestinal fortitude to actually declare a war, IMO,
we should stay out of it.

These aren't my numbers. These are Yassir Arafat's numbers. He used this figure in an interview last year when Israeli/Palistinian hostilities broke out.

So now that we agree that Arafat is a lying bastard, what else has he lied about?

Kim:

Those who don't "have any powder" are also unlikely to be able to dictate the terms on which they will die -- or, more importantly, on which they will live -- should we be faced by an enemy intent on doing such dictating for us. Of course, you can depend on those who *do* have dry powder to use it to protect you from the oppression of an enemy. I'm sure you would not appreciate this, and would probably then accuse those who defended you of being "killers," but the point is, you'd still be free to live within your child-like ignorance and espouse peace, love, kindness, and appeasement of the enemies of our way of life. Just don't fly in any more airplanes, or work in any more tall buildings.

I've been running the experiment all week, using some canned stewed tomatoes, mild salsa, ketchup, and undiluted tomato paste as the corrosive agents on 6" sq. pieces of Reynold's Wrap aluminum foil. I've also had shards of Reynold's Wrap "chaff" dipped in the salsa. Not a scratch on any of the foil. Not even any discoloration, on either the shiny or dull sides. There had to be something different about the sauce that ate up the turkey baster. Of course, I wasn't able to make a nail dissolve in Coca-Cola in a similar experiment many years ago, either. All I got was a wet, sticky nail!

...and that Arab nation was living in squalor and extreme poverty, just like many other Arab nations that are under iron-fisted Muslim rulers. Israel turned that around. The Arabs who which to stay were free to do so and share in the prosperity. They were free to practice their religious beliefs. Instead, they chose to make war.

Hey, Dick? Got a question for you. You are all so fired up on this terrorist thing, right? OK--kewl.

Would you say that there are terrorist organizations here in the United States?:

Dick's answer:

Would you say that those terrorist organizations have caused the suffering and even deaths of others in this country (the United States)?

Dick's answer:

Would you say that those organizations have the right to exist inside the border of the United States?

Dick's answer:

If you believe that those organizations have the right to exist inside the border of the United States, then why can't other such organizations exist outside the border of the United States?

Dick's answer:

If you believe that those organizations have the right to exist within the border of the United States, then why is it OK for terrorists to live and act within the United States border, but not outside the United States border?

Dick's answer:

If you do *not* agree that there are terrorist organizations in the United States, why not?

Dick's answer:

If you agree that those organizations have caused the suffering and even deaths of others in this country (the United States), and you do *not* agree that they are terrorist organizations, then how many more would have to suffer or die before you would consider them as terrorists worth of retaliation?

Dick's answer:

If you agree that they are terrorist organizations, and will cause more suffering and even death, and that it has to stop--how should we go about stopping them, Dick?

Dick's answer:

That's all I want to know.

What was that Reagan said of General Somoza in Nicaragua? "We know he's a son-of-a-bitch, but he's *our* son-of-a-bitch." And, of course, Dick Carroll would demand that all the people who were caused to suffer and die at the hands of General Somoza's armies should smile while it was happening to them.

There's more to it than that, too. Our soldiers of war have been left in the "lurch" many times for benefits due only to veterans who served during wartime. I can remember quite a few Viet Nam vets when that "conflict" first ended who were not eligible for benefits because war was never declared. This included medals of merit, health benefits, monetary considerations for injuries, etc.

There's lots of ways our great and wondrous (wondrous all right) military will ask so much of our soldiers and then hide from when they get home.

My company employs people from many different lands. In many cases, Indians, Laotians, Chinese, Russians, etc., have taken on "Americanized" names. I don't know exactly why, but if you'd like, Dwight, I'll ask them.

It may have a lot to do with having to explain pronunciation and spelling all the time. I wish I could spell out a name for you but here's an example. One guy I know went from a 23 character first and last name to a 7 character first and last name. Not only do we "Americans" have a lot better time pronouncing it, it's so much easier to key!

This article from NYTimes.com

We Are All Alone

October 26, 2001

By THOMAS L. FRIEDMAN

So let me see if I've got this all straight now: Pakistan will allow us to use its bases Mondays, Wednesdays and Fridays - provided we bomb only Taliban whose names begin with Omar and who don't have cousins in the Pakistani secret service. India is with us on Tuesdays and Fridays, provided it can shell Pakistani forces around Kashmir all other days. Egypt is with us on Sundays, provided we don't tell anyone and provided we never mention that we give the Egyptians $2 billion a year in aid. Yasir Arafat is with us only after 10 p.m. on weekdays, when Palestinians who have been dancing in the streets over the World Trade Center attack have gone to bed. The Northern Alliance is with us, provided we buy all its troops new sandals and give U.S. passports to the first 1,000 to reach Kabul.

Israel is with us provided we never question the lunacy of 7,000 Israeli colonial settlers living in the middle of a million Palestinians in the Gaza Strip. Kuwait would like to be with us, it really would, since we saved Kuwait from Iraq, but two Islamists in the Kuwaiti Parliament spoke out against the war, so the emir just doesn't want to take any chances. You understand. The Saudis, of course, want to be with us, but Saudis are not into war-fighting. That's for the household help. Don't worry. Prince Alwaleed has promised to rent us some Bangladeshi soldiers through a Saudi temp agency - at only a small markup.

The Saudi ruling family would love to cooperate by handing over its police files on the 15 Saudis involved in the hijackings, but that would be a violation of its sovereignty, and, well, you know how much the Saudis respect sovereignty - like when the Saudi Embassy in Washington rushed all of Osama bin Laden's relatives out of America after Sept. 11 on a private Saudi jet, before they could be properly questioned by the F.B.I.

And then there's my personal favorite: All our Arab-Muslim allies would love us to get bin Laden quickly, but the

Muslim holy month of Ramadan is coming soon and the Muslim "street" will not tolerate fighting during Ramadan. Say, do you remember the 1973 Middle East war, launched by Egypt and Syria against Israel? Remember what that war was called in the Arab world? "The Ramadan war" - because that's when it was started. Oh, well. I guess the Arab world can launch wars on Ramadan, but not receive them.

My fellow Americans, I hate to say this, but except for the good old Brits, we're all alone. And at the end of the day, it's U.S. and British troops who will have to go in, on the ground, and eliminate bin Laden.

Ah, you ask, but why did we have so many allies in the gulf war against Iraq? Because the Saudis and Kuwaitis bought that alliance. They bought the Syrian Army with billions of dollars for Damascus. They bought us and the Europeans with promises of huge reconstruction contracts and by covering all our costs. Indeed, with the money Japan paid, we actually made a profit on the gulf war; Coalitions "R" Us.

This time we'll have to pay our own way, and for others. Unfortunately, killing 5,000 innocent Americans in New York just doesn't get the rest of the world that exercised. In part we're to blame. The unilateralist message the Bush team sent from its first day in office - get rid of the Kyoto climate treaty, forget the biological treaty, forget arms control, and if the world doesn't like it that's tough - has now come back to haunt us.

And who can blame other countries for wanting to shake down U.S. taxpayers when Dick Armey and his greedy band of House Republicans are doing the same thing - pushing a stimulus bill with more tax breaks for the rich, lobbyists and corporations, and virtually nothing for the working Americans who will fight this war?

My advice: Try not to focus on any of this. Focus instead on the firemen who rushed into the trade center towers without asking, "How much?" Focus on the thousands of U.S. reservists who have left their jobs and families to go fight in Afghanistan without asking, "What's in it for me?" Unlike the free-riders in our coalition, these young Americans know that Sept. 11 is our holy day - the first day in a just war to preserve our free, multi-religious, democratic society. And I don't really care if that war coincides with Ramadan, Christmas, Hanukkah or the Buddha's birthday - the most respectful and spiritual thing we can do now is fight it until justice is done.

<SNIP>

So T.L. Friedman thinks G.W. Bush is at fault for Americans
getting killed. That's the biggest bunch of liberal BS since
Clinton's "I didn't have sex with Monica" statement!!!

When did I write that, Len? Produce the post.

More than once, you have quoted me as writing that phrase. You use
quotation marks, too. No smiley, either. But I don't recall ever
writing such words. I don't think I wrote them at all - I think you
are mistaken, or maybe even lying.

Here's the challenge: Produce the a link or other pointer to the post
where I (N2EY) wrote:

"full of yourself, aren't you?"

about another person.

Can you do it? I don't think so.

I think your alleged quote is just another LHA mistake.

I might be mistaken on the exact phrasing. It could have been just three words "full of yourself." :-)

Of what use is an exact quote? Why spend all the time looking through countless N2EY messages just to assuage someone who feels slighted (perhaps insulted)?

N2EY's posts in here almost every day, is one of the very regular spending a lot of time communicating by computer...thus establishing his "turf" and some sort of right of being a spokesperson for the entire US ARS.

N2EY does not represent the entire US ARS nor does he speak for same. If he feels so slighted/insulted, he can attempt to avenge his honor by not trying to be a voice of the entire US ARS...and stopping the petulant mis-direction by over-identifying his personal opinions with over a half million other licensees.

This is a forum for policy matters regarding amateur radio. It isn't some playground where some regulars whine and bitch and moan about their personal feelings of persecution by demanding exact quotes to "prove" something that matters little to others.

True and also likely to get some whining about it. Nuclear, biological, and chemical warfare are supposed to be a no-no, however we continue to receive 'interesting' mail. Myself, I'd pull the ships and troups back, give them 48 hours to surrender unconditionally, then open up the silos. Guaranteed they will be receiving a lot of messages from other countries. I suspect various spy satellites could detect the silos. After 48 hours, I'd show my goodwill by reducing our nuclear warhead count by a couple. Say a couple of 5 or 10 megaton weapons. It would not be pretty. I suspect that could pretty well remove caves, simply leaving a BIG crater. I also suspect a lot of folk would then lay off the idea of bombing our ships and sending anthrax through our mail system. It is a terrible thought, but after it was over we would have a good 20 years or so of peace - simply because the idea would be planted that we respond in kind. Nuclear, biological, or chemical attacks would be met with the most severe response. Yes, we have bombers that can fly around the world. Heck, an ICBM can reach 'em in 90 minutes flat. Shoot that down if you can.

Since everyone likes to pick nits on this group...

Germany and Italy actually declared war on the US a day or two after we
declared war on Japan. I don't know the exact date without looking it up,
but I know it wasn't the 8th.

6676. Lennie Anderson...Cowardly Liar...Cowardly Propagandist

>
>Of what use is an exact quote?

Yes, Lennie...What is the use of an "exact quote"...?!?!

Why, we can just allow cowardly, lying bastards like you make up what you THINK we said...or create what you WISH we'd say so that all of your rants could look true.

But no problem, Lennie...we never expected you to do something truthful anyway. You are INCAPABLE of it.

>N2EY's posts in here almost every day, is one of the
>very regular spending a lot of time communicating by
>computer...thus establishing his "turf" and some sort of
>right of being a spokesperson for the entire US ARS.
>

As opposed to YOU spending the day communicating by computer and establishing turf as some sort of spokesman for the entire EE community?

>N2EY does not represent the entire US ARS nor does he
>speak for same.

Nor do you speak for us, You Sadistic Putz, yet you would presume to know what's better for the Amateur Radio Service.

>If he feels so slighted/insulted, he can
>attempt to avenge his honor by not trying to be a voice of
>the entire US ARS...and stopping the petulant mis-
>direction by over-identifying his personal opinions with
>over a half million other licensees.

You are, again, lying...or at least attempting to redirect the (accurate) criticism of your inaccurate "quoting" to some other source.

YOU have been called on your misquotes before, and now you are being held accountable for it. Unable to withstand the truth, you again resort to subtrefuge and dishonesty.

Jim has made no such assertion of representation. Unless you'd care to "quote" that one too...?!?

>This is a forum for policy matters regarding amateur
>radio.

Oh...now it's a forum for discussing Amateur Radio amtters...before YOU said it was ONLY for discussing the Morse Code issue.

Once again, nose held to the grind stone, Lennie attempts to redirect attention away from another of his misadventures.

Again he fails.

>It isn't some playground where some regulars
>whine and bitch and moan about their personal feelings
>of persecution by demanding exact quotes to "prove"
>something that matters little to others.

It matters to Jim, and it matters to me. You claim to have some insight as to what's better for Amatuer, yet you seem to have a predisposition to creating quotes of things never said.

Unless done so so for the purpose of creating a fictional piece of literature, that is know as LYING.

Leonard H. Anderson IS a liar...He is NOT truthful, and he does NOT represent in ANY form Amateur Radio.

Period.

>on the USA on December 8, 1941.

That's not waht the "Bull" was for, your Narrowmindedness.

It was your assertion that no one could understand or appreciate the
"outpouring of patriotism" after Pearl Harbor.

That was a foolish thing to say. I understood it when I first studied it
in grade school and discussed it with my parents and grandparents.

What was not to understand?

Once again you think YOU are the only one to have gone through something
therefore have the only insight.

That is a GROSSLY false assumption...Not unlike MOST of your OTHER
assumption and assertions.....

Hey it's Cecil. Look, the trick with Cecil is that he will defend
ANYTHING, doesn't matter what it is, he just likes the debate. So what
you have to do is post the OPPOSITE of your opinion. Then Cecil will
swoop down on your thread and proceed to defend your ACTUAL opinion.
:)

How can we stay out of it? It was brought over here. Remember?

*****
Next time somebody claims we should stay out of Afghanistan, engage them in
a discussion about it.

1. Ask them why we shouldn't fight back.

2. When they answer that retaliation only escalates the violence, and
creates more ill will in the world, punch them in the face.......hard.

3. After they get up to hit you back, remind them of their pledge to
non-violence.

4. When they agree that striking you back would be a violation of their
philosophical ideals, punch them in the face again. Harder this time.

5. Repeat steps 2 through 4 until they have a better understanding of the
concept.

> Provide evidence that .... Germany ...."did not" declare war
> on the USA on December 8, 1941.

You are off by several days. The declaration was December 11th.

Here is the evidence that you demanded:

December 11, 1941
The President's Message

To the Congress of the United States:

On the morning of Dec. 11 the Government of Germany, pursuing its course of world conquest, declared war against the United States.

The long-known and the long-expected has thus taken place. The forces endeavoring to enslave the entire world now are moving toward this hemisphere.

Never before has there been a greater challenge to life, liberty and civilization.

Delay invites great danger. Rapid and united effort by all of the peoples of the world who are determined to remain free will insure a world victory of the forces of justice and of righteousness over the forces of savagery and of barbarism.

Italy also has declared war against the United States.

I therefore request the Congress to recognize a state of war between the United States and Germany, and between the United States and Italy.

Franklin D. Roosevelt

The War Resolution

Declaring that a state of war exists between the Government of Germany and the government and the people of the United States and making provision to prosecute the same.

Whereas the Government of Germany has formally declared war against the government and the people of the United States

of America:

Therefore, be it Resolved by the Senate and House of Representatives
of the United States of America in Congress assembled, that the
state of war between the United States and the Government of
Germany which has thus been thrust upon the United States is hereby
formally declared;

and the President is hereby authorized and
directed to employ the entire naval and military forces of the
government to carry on war against the Government of Germany;

and to bring the conflict to a successful termination, all
of the resources of the country are hereby pledged by the Congress
of the United States of America.

Look at it a little more carefully. It's not like it was
corresponding to "Herman L. Brown". Peretz is a common erquivalent
to Philip. Moshe IS my middle name. Kanafi is the original family
name going back many centuries.

>But, perhaps it is his Hebrew name, but why wouldn't he just openly

I have never - ever - hidden the fact in my personal or public life.
Many times I mentioned that prior to going to the FCC I had a
similar position with the Israeli Ministry of Communications in the
mid 60s and I had to give up dual citizenship to work for the FCC,
and that my brother, sister-in-law, and their kids are all Israelis
and in the case of my brother and nephew, all hams with both US
and Israeli licenses.

>sounding name used here, not the Jewish name.

What's an "ethnic" sounding name? (Plug in your own choice of ethnic).

In a 1968 lawsuit in San Francisco brought by almost 50 white male school administrators who were demoted to lower positions to make way for "affirmative action" appointments, the question came up of what is a "Spanish surname". It was agreed that any such name that appeared more than 100 times in the Mexico City telephone directory would qualify. The plaintiff's lawyer brought that directory into the hearing room the next day and demonstrated that the surname "Cohen" appear4ed over 150 times.....so "Cohen" is now a Spanish surname ?? Said lawyer was the legendary Nathan Cohn, an alternative spelling of Cohen.

And all people named Jew in the San Francisco telephone directory were ethnic Chinese......

If you want an example of my "real" "false" name, for several years I was not permitted to post to BBS or Internet groups under my "real" name because of my then-boss' very skewed interpretation of the requirements for pre-publication clearance for staff members (he just wanted to pull my chain). Until the day I announced my retirement 6+ years ago my "BBS name" was Ploni Almoni, the Hebrew equivalent of "John Doe" (the name appears in that context in Chapter 4 of the biblical Book of Ruth) and in spite of giving my occupation as "Greyhound bus washer", most folks figured out who or

at least what I was from what I said.

No, I won't. Ever. And, I didn't say to just let more Americans die--in
fact, are you ignoring the fact that some have?

I am not repeating my posts. Go back and read where I have no problem with
having to go to war; I have no problem with stricter security--even
oppressive security in public places and in the workplace; etc. I do have a
problem with things such as are now in the anti-terrorism bill.

Before you get so quick to jump on a band-wagon of hysteria, know from where
I am speaking because you got it wrong.

That was one, of about 20, different sections.

If you would like to take the time to research it all, be my guest.

I provided the link more than anything, to show people where to START
looking.

I, myself, have better things to do than educate people here about the finer
points
of motor vehicle laws. However, with the link I provided, it will give you
something
to look for.

Which is something more than I can say for most all of your posts, Aaron.

While I wasn't born until 1948, I fully understand the patriotism that occurred in the aftermath of
Pearl Harbor. I can prove my understanding of this: just look in my driveway--you will find NO
Hondas, No Mitsubishis, No Toyotas, and/or No Mazdas. While it may fall upon deaf and unap-
preciative ears, that ship sitting at the bottom of Pearl Harbor (USS Arizona) is why I choose this
quiet method of protest, yes, these 60 years hence. I will NEVER drive anything but an American
name automobile or truck. You see, in addition to history lessons in school and the remembrances
of my parents, I watched a show on TV while I was still in grammar school called "The 20th Century" with Walter Cronkite. Even at the age of 8, I watched the footage of the Arizona exploding with clenched fists. There were family friends on that ship and others stationed at Pearl on 7 December 1941. So, to this day, the vehicles you will find in my drive have little "bowties"
on the grille, and the ads for the truck versions say "Like a Rock". Yes, I know that some of them
are assembled in Mexico and Canada--I cannot help that. I just quietly drive my American cars
and I still clench my fists when that 60 year old scene comes on the History Channel. So don't
assume that those of us who are younger don't know or understand the feelings of patriotism or anger at attacks against the USA.

Kim, there certainly is no easy answer. Hopefully, once informed that certain things were happening, it would be over before the nuke business began. I admit is not a particularly good idea. Frankly, I'm at a loss as to what is a good idea. Unfortunately, if something isn't done, we can expect more of the same. Didn't England try to appease Hitler just before WWII? In any case, we are all free to disagree - we must, however, be prepared to defend that freedom. The question truely is 'just how far are we prepared to go'? (and that certainly does NOT necessarily mean to 'nuke' them - I just want to make a lasting impression that we are NOT the country to make trouble with.)

Heh heh heh. Ever hear of the telephone or facsimile machine
as a means of "communication?" :-)

When this newsgroup becomes "closed" to registered ARS
licensees and when the FCC refuses to accept citizens'
comments, then I will be quiet.

>Yer Dementia ain't necessarily a bad thing, you'll coast out
>painlessly amidst yer visions of grandeur. Nothing wrong with that

"Dimentia?" Who was it that throught that WW2 surplus
radios could work directly from a WW2 jeep 6 V battery? :-)

Who was it that said he had 26 patents when it was only
ONE in the US Patent registry? :-)

Burger Briny, you just keep on with those wunnerful thoughts
of "mil-spec potato peelings" for Field Day. Just where and
how you can afford a mess kitchen potato peeler machine
(as they had them in 1952) will matter, won't it? :-)

>
>December 11, 1941
>The President's Message

<snip>

Tsk, tsk, tsk. I have two history textbooks printed in the 60s. One states what I wrote. The other one states that the USA declared war on Germany on December 11, 1941. The World Almanac of 2001 states the latter.

First point: The "Bull" crier did not answer the challenge except to write more crap which has nothing to do with the subject, everything to do with his personal obsession.

Second point: Picking flyspecks out of pepper, in this case on real, live dates of the start of a major war period, is rather pointless at this time. It does serve whatever is Brakob's purpose in running off at the keyboard with too much testosterone on a demonstration of "rightness." Is there any question that the USA was NOT in a state of war on December 7, 1941?!?

It's one thing to be patriotic and support the country in its endeavors after September 11, 2001. It's quite another to mouth off about nuking another country or hitting on others who don't share your (apparent) murderous intent. The bad thing about wanting to nuke someone is that there are a number of other countries who have a nuclear arsenal and the means to deliver them. Mouthing manly macho statements of toughness and resolve, posturing until the good conduct medal pops off the ribbon row will NOT stop the shock wave nor shield against radiation. Ain't no "Cipro" defense against that.

OK, I have one history book that says Germany and Italy
declared war on December 8, 1941...but Hans Brakob
has a letter from FDR saying that the USA declared
war on Japan December 8, 1941, and declared war on
Germany and Italy on December 11, 1941. I have
another text that says that, too.

As far as I know from being around then, the USA was
very definitely at war on 7 December 1941. Germany
formally surrendered on May 8, 1945, and Japan formally
surrendered on September 2, 1945.

292,161 military personnel of the USA lost their lives in
battle and some middle-aged men with too much
testosterone want to pick flysnit out of pepper about dates
of declarations of war. :-(

Good Lord son! With that kind of power you'd turn my hearing aides
into little atomic bombs in my head. The younger generation has no
respect for us senior citizens. Martha's gonna put me in a nursing
home because she thinks old timer's disease has come over me. Damn
illegals!!! I get so mad at these guys that Martha says I'm gonna have
a another stroke. If I weren't so old I'd take you damn illegals out
in the woodshed and switch your behinds!

I thank the Lord Jesus every day that we have people like Aaron,
Sparky, and Leland to do the Lord's work on this newsgroup.

That's funny--I could swear that you are the same Leonard H. Anderson
who has often stated that one of several individuals *does*, by making
certain statements, represent all of U.S. amateur radio. Which way is
it then?

"This" is a forum for policy matters (I think we all understood that
before your enlightening mention of it). It would also seem to be a
playground for you to bitch and moan about your personal feelings of
being "insulted and denigrated" by those who don't agree with you.
Which way is it then?

Do we have one standard for you and a different one for the rest of us?

Dave K8MN

Gee....my starting salary at a high-paying prestige aerospace
"house" as a newly-graduated engineer from a top school in 1957 was
$5200/year !! Ten years later, $12K was a very good salary.

>First point: The "Bull" crier did not answer the challenge
>except to write more crap which has nothing to do with
>the subject, everything to do with his personal obsession.

Liar.

Your "challenge" was answered. Of course you have tried to lie your way out of this one too.

You didn't like the answer, especially since it once again proved you foolish.

Doesn't take much, you know.

>Second point: Picking flyspecks out of pepper, in this case
>on real, live dates of the start of a major war period, is rather
>pointless at this time.

At at what point do you consider accurate reporting of historical facts to be appropriate, Your Putziness?

>testosterone on a demonstration of "rightness." Is there any
>question that the USA was NOT in a state of war on
>December 7, 1941?!?

Since that was not your original assertion, it does not matter. Yes, we were "technically" at war.

However you once again attempt to redirect the conversation after having been proven (again) to be wrong.

>ex-RA16408336

As meaningless as your expired GROL, Lennie.

I am not sure, Phil, if the change had been at their generation level (which would be that of my parents), or earlier than that--like when they first settled here in the US.

As a kid, I remember Jerry speaking of very difficult times getting employment; and I know his kids used to get totally razzed and picked on, etc., in school. These were service friends of the family; Jerry had served under my Dad in the Navy.

I also remember many comments toward nearly all ethnicities (so it wasn't just Jewish people) when I'd run around the streets of NYC as a visiting teen-ager each Summer. My very first experience with bigotry/prejudism when I was just turning 13 (other than having seen "Whites Only" signs in Virginia--but I didn't really know what they were or meant at the time):

I was in a pizza shop enjoying a slice of pizza. I was by myself, as everyone else had left to continue the bike ride we were on to Rocky Point (I think that was the name of it) for swimming. This little black kid, he couldn't have been more than 3 1/2-4 years old, walked in through the door carrying a quarter high up over his head. He was so proud of himself. I took a look outside because I was at first quite surprised that this little kid would be "by himself." His Dad was standing just outside, having just given him the quarter to take to the man to get his slice of pizza. The dad was beaming.

The kid got up to the counter and in his sheepish, childlike voice said, "can I have a slice of pizza?" The man (probably Italian--he looked to be), leaned far over the counter, looked that little kid right in the eyes and said, "We don't serve niggers here." I about fell over in pure pain for that little kid, and could not believe the despicability of this grown man to treat a kid like that--any kid!

I wanted to run up and scream at the guy, but didn't know if the Dad outside would be offended by that or what.

At going on nearly 13 years old, I was personally affected by that bigotry, feel like it happened to me also--though I don't know many people who'd understand that. I don't think I made the "vow" at that time; but make a conscious effort every single day of my life to keep anything that even seems remotely prejudicial in check.

I've always wondered about that little kid.

You mean you are now not so sure about a United States policy such as the anti-terrorism bill, which puts some of our liberties at real risk?

You use the phrase "freedom loving way of life" after you called me a "freedom freak" just a week or two ago?

You say "the likes of you" while you are speaking of a "freedom loving way of life"? You apparently don't realize that a freedom loving way of life includes the likes of me.

You are pathetic.

And, just out of casual curiosity, what was--*EXACTLY* Dick, that you are doing to "change that which is diametrically opposed" to your freedom? I mean, other than waving some kind of freedom flag in here while you are slinging trash and hate toward others who think differently than you.

What is that you are doing? Now, don't go off half-cocked (even that would be an effort for you) and start slinging again. Give me some real things, constructive things that you are doing for the cause of freedom.

What? Got nothing? Not even a letter to your representative? Nothing?

Thought so.

You are mistaken about the whole thing. Again.
>
>Of what use is an exact quote?

The lack of it shows you are not telling the truth. You have claimed that another person wrote something, but when challenged to produce the post, you produce nothing but lame excuses. False attribution compounded by evasion.

You changed the subject line but have not issued any challenge.

> Why spend all the time
>looking through countless N2EY messages just to
>assuage someone who feels slighted (perhaps insulted)?

All it takes is a little deja.com search. And the purpose is to show that you are not lying or making things up. Your failure to produce the post says it all.

It wasn't a demand, it was a challenge for you to back up what you wrote. You obviously can't rise to the challenge.
>
>N2EY's posts in here almost every day, is one of the
>very regular spending a lot of time communicating by
>computer...thus establishing his "turf" and some sort of

More errors and mistakes from LHA. I post here most days, sure. Nothing wrong with that. The rest of your sentence is pure rubbish. Not even grammatically correct.
>
>N2EY does not represent the entire US ARS nor does he
>speak for same.

Never said I do. Where do you get such ideas?

Sounds like you are against free speech for those who disagree with you or your ideas. Double standard.

The subject was about your misquote and false attribution. Stay focused.

>If he feels so slighted/insulted, he can
>attempt to avenge his honor by not trying to be a voice of
>the entire US ARS...and stopping the petulant mis-
>direction by over-identifying his personal opinions with
>over a half million other licensees.

More rubbish. Trash day around here is Monday, when is it out your way?
>
>This is a forum for policy matters regarding amateur
>radio.

We know, Len. Why do you post so much that is obvious to a turnip?

>It isn't some playground where some regulars
>whine and bitch and moan about their personal feelings
>of persecution by demanding exact quotes to "prove"
>something that matters little to others.

Then why do you do that so much?

Try not projecting your actions and motives onto others. Much healthier.

Your game is obvious, Len. You know you can't back up your quote, so you attack me rather than admit a mistake. Typical ad hominem attack.

You're obviously angry, petulant and insulted because you've been caught with your hand in the false attribution cookie jar. Little N2EY is again showing that Emperor Anderson has no logical clothes.

Too bad. You can whine, bitch and moan but it doesn't change the fact that you have misquoted and falsely attributed - more than once.

Some family friends, Jewish, had the original last name of Levine. They dropped the 'e' and became Levin.

This hid the Jewish ancestry of the name, and for reasons such as Phil mentioned.

I'd rather not. In fact, should you ever have the opportunity to "protect"
me please do not. I would not want that from anyone. I choose to do my
best to affect and have an affect on things I can control and influence.
Things that I cannot control and influence, I let go.

>

You speak from inexperience of knowing me. I would never call any soldier called to duty or answering to duty a killer, Larry. Have you?

I work in a tall building every day. I don't fly in airplanes anyway, as travel is generally not in my plans. However, I would fly if flying was required.

I don't think I have a child-like ignorance and I sure don't espouse all that much peace, love, and kindness--you must not know how to read?

If someone walks up to me and has a gun pointed to my head--it is still on my terms that I die, and I hope I'd muster a smile going out. You will just never understand something like that, Larry--life is too important to you.

I simply accept what life offers--at least I've always been able to now. We'll see what the future holds, and I certainly make no guarantees. But, it is my sincere desire and hope that I'll always be able to accept things for what they are.

Yes, there's a little for everyone in that article, isn't there? You might have a point about the nuke. Only thing is, there's lots of innocent people over there too--but I do know that I'd be willing to die to allow justice to be done. I just wonder if I have the right to expect that of someone else. I don't think I do.

I always said if I had been one of the Iranian hostages, I would have wanted, and would have been willing to see a nuclear bomb come straight down out of the sky.

The hardest part of a philosophy like that in life is I have had it through raising two children, loving dearly two husbands, family and friends. Asking people to keep me out of their desires for life at all cost is hard--for them.

I am still astonished pretty regularly at the claims of many that "the Jews" are taking over this country; making and stealing all the money; and are going to build a Jewish state at the cost of "us." I know people who actually live in true belief, and fear, of that being real life--and hate "the Jews" just because of it.

> > There's always The Farm with my K2.

> Unconditionally surrendered again didja?

Nah. Better scenery at The Farm.

Plus I might make more points with my trapper and QRP than all of ya
put together. All it would take is about 350-360 CW QSOs plus some
bonus points.

Speaking of FD, the results are at the FCC website. CW QSOs are UP
from FD 2000, phone QSOs are down. How about that.
>
> By the way summer is over, where's the vaunted Elecraft 100w amp? As
> if.

I dunno. Been too busy with the audio filter and autotuner. Might get
SSB and 160 for Xmas.

From what I've glommed, FCC doesn't know what to do about the amp.
They gotta type-accept it. I might build me an 811A one-holer just to
keep 'em glowing.

>How do ya spell "stranded"?

Resale on a K2 is more than the kit price.

> > >You've bought into peeling 100 pounds of Idaho spuds instead.

I did the FD QRP thing twice already, 1974 and 1983 or thereabouts. With setups that were nowhere near as good as the K2/trapper.

Absoluterly Phil, I had it made as a student, thankew big oil
socialism. In fact I took a $500/yr. pay CUT when I went to work for
the Naval Air Engineering Lab/Philly as a GS-7 after graduation. Worse
yet, if I had been a four year grad and didn't have the two years of
co-op experience I would have gone into NAEL as only a GS-5. I don't
remember what the delta between a 5 and a 7 was but it wasn't peanuts.
And us co-op grads who went with the gummint stayed two grades ahead
of the four-year '63 grads for several more years until just abt all
of us had become 11s.

> birthday - the most respectful and spiritual thing we can
> do now is fight it until justice is done.

This guy misses all the root causes.

The Western powers, and specifically the USA, are seen by folks like OBL as corrupting their part of the world. Oil money put folks like the Shah of Iran and Saddam in charge, then they spent the profits on repression and militarism. The Saudis control the world price of oil, so the West has to look the other way at almost anything they do. And the West keeps pouring the money into the region because so many of us "need" SUVs and pickup trucks as single-passenger commuting vehicles. Despite all this money, the Persian Gulf region isn't a paradise for those who actually live there. So the extremists blame the West for their problems.

How much would Americans be willing to change their "lifestyle" to the extent that American dependence on imported oil would disappear?

I did NOT advocate that "we should stay out of something". You
apparently continue to fail to understand the nature of a
conditional statement. Whether the US has "enough intestinal
fortitude" is the key to that statement. Do we have it or not?
If we do, we should declare war. If we don't, we are not
ready for war.

Yes. You use such big words, and such abstract concepts that how am I, with such limited vocabulary and intellect, to possibly grasp what you are saying?

You're an insulting lout, Cecil. Can you not make a point without intertwining personal remarks?

> Whether the US has "enough intestinal
> fortitude" is the key to that statement. Do we have it or not?

Do you honestly believe that a lack of intestinal fortitude is the thing preventing a declaration of war in this case? If so, then you are the one with the failure to comprehend.

I don't see the message from Phil you're responding to, Kim. My news server is still dropping messages. Rather then reply to your message while actually trying to respond to him, I'll just let what he said rest.

Interesting (?) account of the events, Len. First, there was very little internal conflict between the two Germanys (the Berlin airlift, decades ago, was the big one). Second, West Germany has been a member of NATO, and an ally, for decades (decades before the reunification of East and West Germany). I realize that is what you were trying to say, but I wanted to clarify that which was unclear.

OK, I'm as guilty as the next guy, but this _is_ rec.RADIO.AMATEUR.policy,
not rec.terrorists.are.ruining.my.life.policy.

Can we move all the bin-laden-has-civil-rights-too crap to a more
appropriate newsgroup?

Thank you.

I doubt he can rise to an alarm clock, let alone a challenge.

And after Lennie's failure to produce any direct practical experiences vis-a-vis children/adolescents/why-there-should-be-an-age-limit rant, I doubt he's ever been able to get anything else to rise, either.

As if we had any doubts.......

OK...And after we do that, what will we discuss here? More
"why-Morse-Code-has-(fill in blank)-my-life"...?!?

(a) ruined (b) fulfilled

No one wants to discuss anything BUT that, and it's a dead issue. AT THE
MOST Morse Code as a testing requirement will be with us four-five
years...maybe less...I doubt more...

Want to discuss MEANINGFUL policy...?!?! The "spectrum protection act" or
it's variants has died in committee or allowed to expire at session end three
times now despite having scores of "co-sponsors".

What can we do to get this through...?!?

Just curious.

It's certainly what Israel would do. Alledgedly, they have 24 nukes aimed at the most populous cities in the Middle East. If there is a nuclear or biological attack within their borders, they're not going to look for any evidence. They're just going to push the button and let every last missle fly with a harty "Hallelujah!"

Agreed, but you have to admit that it's been a relief from the code/no code arguments that have been permeating the group for the past 23,497 eons.

Keep ramming it at them until we get a session which doesn't end
in some "crisis" mode, leaving no time to consider "non-vital"
legislation.

Here are some other "policy" questions for consideration:

-- Should it be the policy of USA to ask for worldwide 40M allocation
at:

a) 7.000-7.300MHz
b) 6.900-7.200MHz
c) 6.800-7.100Mhz

-- If push came to shove, should we accept a worldwide allocation
of 6.900-7.100 amateur-exclusive, in exchange for the current?
(Which is 7.000-7.100 in R1 anr R3, 7.000-7.300 in R2).

-- Should it be FCC policy to permit only traffic, weather, public service,
and other such nets on the new 60-meter band?

-- Should it be FCC policy to permit "talk shows" such as the K1MAN
transmissions on Amateur Radio.

-- Should it be FCC policy to periodically conduct occupancy monitoring
of VHF/UHF amateur bands, and adjust those allocations based on
observed usage?

Surely we can think of more Amateur Radio policy matters that
should be publicly discussed. Maybe we can get some ham radio
back in this ham radio newsgroup.
